REPORT.

To the Honorable

The Minister of Inland Revenue.

SIR,—Herewith I have the honor to submit statements of the revenues collected by this Department for the Fiscal Year ended 30th June, 1878, together with the usual information as to the cost of collecting them, and statistical details respecting the sources whence these revenues were derived.

1. The following summary comparison shows the accrued revenues for the years ended 30th June, 1874-75-76-77 and 78 respectively. Comparative statement for five years.

	1874.	1875.	1876.	1877.	1878.
	\$	\$	\$	\$	\$
Excise.....	5,612,582	5,110,353	5,538,277	4,950,624	4,888,070
Public Works.....	672,120	558,699	537,026	547,377	507,132
Culling Timber	95,913	89,597	71,953	67,128	56,489
Bill Stamps.....	209,233	244,592	226,960	208,968	200,614
Weights and Measures, Gas and Law Stamps.....			2,116	55,057	33,405
Total.....	6,589,848	6,003,241	6,376,332	5,829,154	5,685,710

2. By the above Statement it will be seen that the accrued revenue during the year just closed was \$5,685,710, as against \$5,829,154 for the year 1876-77, being a decrease of \$143,444, or nearly 2½ per cent. Details of decrease.

The decrease has arisen as follows:—

Upon Excise.....	\$62,554
“ Public Works.....	40,245
“ Culling Timber.....	10,639
“ Bill Stamps.....	8,354
“ Weights and Measures, Gas and Law Stamps.....	21,652
	\$143,444

The decrease has therefore been general over all branches of Inland Revenue.

Summary
statement as
to Excise.

3. The following Statement will show the details of Excise Revenue accrued during the past year, compared with the four years ended 30th June, 1874, 1875, 1876, and 1877 respectively :

Articles.	1	2	3	4	5
	1874.	1875.	1876.	1877.	1878.
	\$	\$	\$	\$	\$
Spirits	3,503,365	2,977,221	3,099,893	2,650,852	2,708,585
Malt Liquor.....	25,570	29,976	14,188	7,475	6,636
Malt.....	354,765	351,386	327,709	389,257	538,592
Tobacco.....	1,401,271	1,434,778	1,775,450	1,630,390	1,581,502
Petroleum.....	274,439	268,553	285,553	235,329	6,469
Manufactures in Bond.....	40,006	37,176	27,834	30,054	36,894
Seizures.....	6,289	5,220	1,675	1,597	3,934
Other Receipts	6,877	6,043	5,975	5,670	5,458
Total.....	5,612,582	5,110,353	5,538,277	4,950,624	4,888,070

SPIRITS.

Comparison
of quantity
of spirits.

4. The following tables of *quantities* are given for comparison as leading to a more just conception of the subject than a comparison of the revenues collected under rates of duty which have been frequently changed :

1	2	3	4	5	6	7	8	9
Fiscal Year.	In Warehouse at commencement of period.	Manufactured during the year.	Taken for Consumption.	Exported.	Used in Bonded Factories.	Otherwise accounted for.	In Warehouse at end of period.	Memo. of Revenue accrued, including Licenses Fees.
	Pf. Gals.	Pf. Gals.	Pf. Gals.	Pf. Gals.	Pf. Gals.	Pf. Gals.	Pf. Gals.	\$
1873-74...	1,351,502	4,528,118	4,566,508	164,730	234,242	937	913,203	3,503,365
1874-75...	913,203	4,682,923	3,303,298	168,709	250,764	26	1,873,329	2,977,221
1875-76...	1,873,328	3,111,346	3,441,126	83,037	182,260	1,466	1,276,786	3,099,893
1876-77...	1,276,786	3,546,878	2,942,337	173,470	193,928	208	1,513,721	2,650,852
Annual Average of four years ended 30th June	5,414,819	15,869,265	14,253,268	589,946	861,194	2,637	5,577,039	12,231,331
1877....	1,353,705	3,967,316	3,563,217	147,486	215,218	659	1,394,259	3,057,833
1877-78...	1,513,721	3,530,085	3,007,870	164,360	224,746	20,318	1,626,512	2,708,585

5. From the above it will be seen that the quantity of spirits taken for consumption during the past fiscal year is greater by 65,533 gallons, or 12 $\frac{1}{2}$ per cent. than the quantity taken 1876-77, which was less than the quantity taken in either of the four previous years. The quantity taken in 1877-78 is less than the average of the four preceding years by 555,447 gallons, equal to 15 $\frac{1}{10}$ per cent. Per centage of increase and decrease.

The average quantity of spirits taken for consumption during the two years 1876-77 and 1877-78, fall below the average of the preceding four years by 785,214, but there was an increase in the quantity taken for consumption during the fiscal year over the previous year.

6. With reference to illicit distillation, I submit that the number of seizures of illicit stills is a justification of the assumption that this traffic has been a serious cause of loss to the revenue. Illicit distillation. Previous to the 1st July, 1875, the total number of illicit stills seized was 189; during the fiscal year ended 30th June, 1876, the number seized was twenty. During the past fiscal year we seized forty-seven.

It is of great importance to the revenue that these frauds should be suppressed, and the Department has substantial reasons for believing that only a rigid enforcement of the law will have the desired effect.

The statement in Appendix C shows the number of illicit stills seized during the past fiscal year, the names of the parties from whom the seizures were made, and the nature of the punishment inflicted in the cases in which a conviction was obtained.

7. The quantity of spirits held in bond at the commencement of the past fiscal year was 112,791 proof gallons less than the quantity held at its close, the quantities being respectively 1,513,721 and 1,626,512 gallons, and the last mentioned quantity is greater by 232,253 gallons than the average quantity held at the close of each of the preceding four years. Spirits in bond.

8. The quantity of spirits exported in 1877-78 was 164,360 proof gallons, an increase over the average quantity—147,486 gallons—exported in each of the preceding four years of 16,874 gallons. There has been a small increase of 30,818 gallons in the quantity taken into bonded manufactories over the quantity taken in the previous year. Comparison of averages.

9. Two statements are given in Appendices A. and B., showing the consumption of goods subject to Excise (including similar goods Consumption of excisable

goods per
capita.

imported and subject to Customs duties) per head of the estimated population in the several Provinces and in the Dominion, during a series of years, being a continuation of similar statistics in former Reports.

MALT AND MALT LIQUOR.

Comparison
of five years
1870 malt.

10. The following Statement shows the transactions in malt during the year ended 30th June, 1878, and four preceding years:

Fiscal Year.	1	2	3	4	5	6	7
	In Warehouse at commencement of period.	Manufactured during the Year.	Taken for Consumption.	Exported.	Otherwise accounted for.	In Warehouse at end of period.	Memo. of Revenue accrued thereon, including License fees.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	\$
1873-74.....	12,862,041	31,802,989	33,369,016	6,233,367	412,292	4,650,355	354,765
1874-75.....	4,650,355	41,039,986	33,016,082	4,677,960	33,360	7,962,939	351,386
1875-76.....	7,962,939	51,876,385	30,693,447	10,123,378	7,190	19,015,309	327,709
1876-77.....	19,015,309	39,235,298	28,878,551	11,577,814	2,910	17,791,332	389,257
	44,490,644	163,954,658	125,957,096	32,612,519	455,752	49,419,935	1,423,117
Annual average of four years ended 30th June, 1877.	11,122,661	40,968,664	31,489,274	8,153,130	113,938	12,354,984	355,779
1876-77.....	17,791,332	48,229,293	26,534,587	19,151,181	20,334,857	538,592

Comparison
of averages.

11. The above statement shows that the quantity of malt manufactured during the past fiscal year is greater than the average of the four previous years, by 7,240,629 lbs., and more than the quantity manufactured in 1876-77 by 8,993,995 lbs., while the quantity taken for consumption was 4,954,687 lbs. below the average, and 2,343,964 lbs. less than was taken in 1876-77. These figures show that there has been a steady decline in the quantity of malt used during the past five years.

Exports.

12. The quantity of malt exported last year is 10,998,051 lbs. in excess of the average exports of the preceding four years, and 7,573,367 lbs. in excess of the exports of 1876-77.

13. The quantity remaining in bond on the 30th June, 1878, was In bond.
more than the quantity in bond at the commencement of the year
by 2,543, 2

14. Of the quantity of malt used during the fiscal year, 25,180,329 Quantity
used for
brewing.
lbs., were used in the manufacture of malt liquor, and 2,868,260
lbs. in distilling. It is somewhat remarkable that notwithstanding
the increased duty on malt, the use of glucose, sugar, and syrup as
a substitute for malt has been almost entirely discontinued and yet
the relative duty on beer made from such articles in proportion to
the duty on malt has only been increased one-quarter of one per
cent.

15. There has been refunded under the Act 31 Vic., Cap. 8, \$11,506 Net revenue
from malt
as a drawback of malt duty on malt contained in 218,870 gallons of
beer exported, and \$490 on the malt used in the manufacture of
10,137 gallons of beer consumed by Her Majesty's troops and navy.

16. After deducting these items it appears that the net revenue And malt
liquor.
from malt used by brewers is \$491,610. Add to this \$54,066, the net
amount collected on malt used in distilling (after deducting \$3,299
refunded as a drawback on malt contained in spirits exported) and
\$14,525 for maltsters' and brewers' license fees, and we have a total
of \$560,201 as the product of the excise on malt and malt liquors.
The amount collected from the same source in 1876-77 was \$431,548,
the average during the preceding four years having been \$360,757
per annum.

TOBACCO.

17. The transactions in manufactured tobacco of all descriptions Comparison
of five years.
stated in pounds, during the five years ended 30th June, 1878, are
shewn in the following Statement:—

Year ended 30th June.	1	2	3	4	5	6
	In Ware- house, 1st July.	Manufac- tured during the year.	Taken for Con- sumption.	Exported.	Otherwise accounted for.	In Ware- house 30th June.
	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.	Lbs.
1873-74.....	1,490,547	8,865,276	8,484,193	483,357	12,989	1,315,284
1874-75.....	1,315,284	9,567,152	6,575,443	359,809	16,690	3,930,494

Annual average of four years ended 30th June, 1877....	2,211,254	8,633,121	7,783,556	521,163	14,602	2,525,052
1877-78	2,745,745	7,940,192	7,475,622	401,221	170,357	2,638,737

To the above quantities are to be added the quantity of leaf taken for consumption in a raw state, during the same years, which will give the following additional columns:—

—	7		8	9
	Raw Leaf taken for Consumption.		Total Tobacco taken for Consumption.	Duty collected thereon, including License Fees
	Canadian.	Foreign.		
	Lbs.	Lbs.	Lbs.	\$
1873-74.....	113,797	277,634	3,875,624	1,401,271
1874-75.....	65,529	228,172	6,869,144	1,434,778
1875-76.....	11,932	158,272	8,524,159	1,775,450
1876-77.....	8,630	87,203	7,816,466	1,630,390
	199,888	751,281	32,085,393	6,241,889
Annual average of four years ended 30th June, 1877.....	49,972	187,820	8,021,348	1,560,472
1877-78	3,202	42,507	7,521,331	1,581,503

Comparison
of averages.

18. From the above it appears that the production of manufactured tobacco, during the past fiscal year, has been 1,051,418 lbs. less than the quantity manufactured in 1876-77, and less than the average annual production of the four preceding years by 692,929 lbs., but the quantity taken for consumption during the year ending 30th June, 1878, is less than the quantity taken during the preceding year by 295,135 lbs., and less than the average taken during the four preceding years by 500,017 lbs.

In bond.

19. The stocks of manufactured tobacco in warehouse, at the close of the past fiscal year are less than the stocks in warehouse at its commencement by 107,008 lbs., and they exceed the average of the preceding four years by 113,681.

Small consumption of
Canadian tobacco.

20. The additional column (No. 7) respecting raw leaf presents an unsatisfactory statement in relation to that article. The quantity of Canadian leaf taken for consumption, as such, was at the maximum in 1873-74, when it amounted to 113,797 lbs. Since then there has been an annual decline. Last year, it amounted only to the nominal quantity of 3,202 lbs.

In view of the large number of seizures of such tobacco illegally offered for sale, there is reason to fear the existence of a widespread determination on the part of the cultivators to evade the duty.

CIGARS.

21. In continuation of the tabulated Statements submitted last year the following is now submitted:—

Comparative
consumption
of cigars.

Year.	Total Consumption.	Customs Duty.	Excise Duty.
	Lbs.		
1873.....	674,609	45 cts. per lb.	30 cts. per lb.
1874.....	676,429	45 do	40 do
1875.....	488,273	70 do	40 do
1876.....	507,866	70 do	40 do
1877.....	417,703	50 do and 20 per ct. ad val.	40 do
1878.....	496,860	50 cts. per lb. and 20 per ct. ad val.	40 do

The total consumption in 1878 shows, therefore, an increase of about 18·95 per cent., as compared with 1877, of which 3·28 per cent. is on imported cigars, and 15·67 per cent. on cigars of Canadian manufacture.

Of the whole quantity taken for consumption the proportions have been :—

1873 imported.....	72·09 per cent.
Canadian.....	27·91 do
1874 imported... ..	64·64 do
Canadian.....	35·36 do
1875 imported.....	36·00 do
Canadian.....	64·00 do
1876 imported.....	38·48 do
Canadian.....	61·52 do
1877 imported.....	28·85 do
Canadian.....	76·15 do
1878 imported.....	27·00 do
Canadian.....	73·00 do

PETROLEUM.

22. The total repeal of the duty on Petroleum prevents any reliable statement of the transactions in that article being offered. The following table, is however repeated for reference but the line for 1878, only refers to the quantity inspected and the fees collected thereon as to which it may be observed that in some cases, fees are twice collected on the same article as happens

Repeal of
duty and
comparison
of previous
years.

when petroleum is inspected in London, removed to Montreal in *Tank Cars*, and reinspected on being put into barrels:—

1	2	3	4	5	6	7	8	9

MANUFACTURES IN BOND.

Comparison of five years. 23. The revenue derived from duties levied on goods manufactured in bond—chiefly Vinegar and Methylated Spirits—during a series of five years, has been as follows:—

1873-74	\$40,006
1874-75	37,176
1875-76	27,834
1876-77	30,053
1877-78	36,894

and call for no special comment.

PUBLIC WORKS.

Decrease in revenue. 24. During the past fiscal year there has been a decrease in the revenue from Canals; a decided decrease in the revenue from Slides and Booms and an increase from minor public works, while the col-

lections from hydraulic rents have been considerably diminished. The following Comparative Statement gives the exact figures:—

—	1876-77.	1877-78.	Increase per cent.	Decrease per cent.
	\$	\$		
Canal Tolls, &c.....	373,954	361,052	3.45
Slides and Booms.....	115,862	83,291	28.11
Hydraulic and other Rents	50,017	32,219	35.58
Minor Public Works	7,545	30,569	305.15	
	547,378	507,131		

Canals.

26. The following Statement gives a summary of the Canal revenue from the several Canals, shewing the increase and decrease in each case:—

Canals.	1876-77.	1877-78.	Increase per cent.	Decrease per cent.
	\$	\$		
Welland.....	218,779	217,51958
St. Lawrence.....	81,370	77,749	4.45
Chamblly	20,727	17,082	17.58
Ottawa.....	43,362	39,491	8.92
Rideau.....	5,259	5,109	2.85
Burlington.....	3,793	3,827	.89	
St. Peter's.....				
Newcastle District Works.....	664	275	58.58
	373,954	361,052		

26. The following figures indicate the several classes of articles upon which the revenue has decreased or increased on the Welland Canal:—

TOLLS ON	1876-77	1877-78.	Decrease per cent.	Increase per cent.
	\$	\$		
Vessels.....	26,328	23,937	10.00
Passengers	407	439	7.86
Produce of Forest.....	35,503	25,828	27.25
do Animals.....	271	227	16.23
do Agriculture	77,620	85,864	10.62
Manufactures and Merchandises	77,974	79,877	2.44
Total Tolls.....	218,103	216,172
Fines and Damages.....	676	1,347
Total.....	218,779	217,519	.58

Tranship-
ment of grain
at Port Col-
borne.

27. The quantity of grain transhipped at Port Colborne in 1878 and three previous years is given below. The total number of grain laden vessels lightened at that port in 1878 was 94 against 53 in the previous year. The number unladen without entering the Canal was 47 as against 49 in 1877. The quantity of grain lightened was as follows :—

	1875.	1876.	1877.	1878.
	Centals.	Centals.	Centals.	Centals.
Wheat.....	167,760	94,838	37,440	48,595
Corn.....	129,460	71,680	75,580	147,879
Barley.....			5,600	

The quantity of grain discharged in the port from vessels which did not enter the Canal was as follows :—

	1875.	1876.	1877.	1878.
	Centals.	Centals.	Centals.	Centals.
Wheat.....	653,820	389,000	337,040	163,330
Corn.....	145,800	247,040	422,800	414,452
Barley.....	9,440			

Canal Statistics for the Season of Navigation.

Statistics for
season of na-
vigation to
follow.

28. Following the plan adopted in previous Reports, the statistics for the season of navigation, 1878, will be given separately, and will be accompanied by the usual comparative statements.

Slides and Booms.

Comparison
of revenue.

29. The revenue accrued from these works in 1877-78 amounted to \$83,243. In 1876-77 it amounted to \$111,085, shewing a decrease of \$27,842. The outstanding balances now amount to \$206,119, a decrease of \$15,121. The greater portion of these balances consist of disputed claims, the settlement of which has been delayed from time to time.

Hydraulic Rents and Minor Public Works.

Outstanding
balances.

30. The outstanding balances due on account of Hydraulic Rents have been decreased during the past year from \$218,735 to \$200,976. The balances due on Minor Public Works have been increased by \$21,933. This large increase is consequent upon the conditions relating to the sale of the old Post Office buildings at Montreal.

The revenue accrued on all these works, was \$62,788, of which \$51,065 has been collected, and \$6,902 remitted by authority.

CULLING TIMBER.

31. The fees accrued from culling timber in 1877-78 amounted to \$56,489, while the amount collected was \$53,521, thereby increasing the outstanding balances from \$26,813 to \$29,781. A considerable portion of this balance will probably be lost, but such of the items as are considered good have been placed in the hands of the agents of the Minister of Justice for collection.

Outstanding
balances.

32. The cost of the Cullers' office for 1877-78 was \$49,940, being \$6,549 less than the accrued revenue for that year.

Cost of cul-
lers office less
than revenue.

BILL STAMPS.

33. The revenue from this source in 1877-78 was \$200,614 as compared with \$208,968 in the previous year. There has, therefore, been a further decline of \$8,354. The decrease last year was \$17,991.

Comparison
of revenue.

WEIGHTS, MEASURES AND GAS :

35. An account of the expenditure and receipts in connection with this service, will be found at pp. 36 to 44 and pp. 220 to 234 of the appendices. There has been a large falling off in the revenue from this service in consequence of the amendments to the Act by which the fees for a second or any subsequent verification, are reduced by 75 per cent, as also by a readjustment of the tariff by which the first fees were reduced. The amount accrued in 1877-78 was \$32,101 as against \$54,549 in the previous year. A special report in relation to this service has been prepared, which together with the statistical details of the work done, will form a supplement to this Report.

Expenditure
on revenue.
Supplement-
ary report to
follow.

PREVENTION OF ADULTERATION OF FOOD.

36. During the past fiscal year the expenditure under this Act was \$5,947. A full account of the work done, with the Reports of the Analysts, will be found in a Supplementary Report.

Amount
expended.
Supplement-
ary report to
follow.

OUTSIDE SERVICE.

37. During the fiscal year examinations of outside officers, were held in the months of July, August and September, at the principal places with the following results:—

Examination
of officers.

First Class.....	8
Second Class.....	19
Third Class.....	15

**Special class
excisemen.**

37. It will be observed that there were no examinations for *Special Class Excisemen*. The total number of this grade is determined by the Order in Council of 10th July, 1873, and as that number has been appointed it was not considered expedient, in view of the decreased number of distilleries, to offer any opportunities for passing into that class until vacancies occur which will require to be filled.

**Inspection
of staple
articles.**

38. Appendices D. E. F. G. comprise returns in relation to the inspection of Staple Articles.

All of which is respectively submitted,

A. BRUNEL,
Commissioner.

December 24, 1878.

Ice.....	0 05

NOTE.—Coal to pass up all Canals, except the Welland Canal, free of Toll, as per Order in Council, June 7th, 1869.

Iron Ore, Kryolite or Chemical Ore, through one section, or all the Canals, per ton, 5 cents.

Iron and Salt having paid full Toll through the whole line of the St. Lawrence Canals, or through the Lachine Canal, St. Ann's Lock, or Ottawa and Rideau Canals, shall be allowed to pass free through the Welland Canal; and if Tolls shall have been paid at the Chambly Canal, such tolls shall be refunded at Montreal or Kingston Mills, upon the Iron or Salt leaving the Canal.

Wheat, Flour, Corn, Barley, Pease, Oats and Petroleum, having paid full Tolls through the Welland Canal, shall be allowed to pass free through the St. Lawrence Canals, or through the Ottawa and Rideau Canals, St. Ann's Lock, the Lachine Canal and the Chambly Canal, provided always that the articles to be entitled to the exemption shall go downwards through the whole length of the Canal to Montreal, or pass upward from Montreal through the whole length of the Ottawa and Rideau Canals to Lake Ontario.

All articles, goods or merchandise, not enumerated above, to be charged to Class No. 4.

No Let Passes to be issued to steam tugs or other small vessels for less than 25 cents as a minimum charge, but such vessels not carrying freight or passengers can obtain, on payment of \$30, a season "Let Pass," which will pass them up and down the Canal as often as desired.

Ice passing through the Welland Canal, per ton, 5 cents, per O. C. May 4th, 1874.

No. 38.—Continued.

SUPPLEMENT No. 1

TO THE

REPORT

OF THE

COMMISSIONER OF INLAND REVENUE.

To the Honorable

The Minister of Inland Revenue.

SIR,—I have now the honor to submit my Report on the Canal Statistics for the season of navigation of 1878:—

1. The Statistics of the season of 1877 are printed with the Annual Report of the Department; and comparing them with those now submitted, it will be seen that the aggregate revenue has decreased in 1878 by \$42,898.12. This decrease is accounted for as follows:—

	Decrease.	Increase.
	\$ cts.	\$ cts.
On the Welland Canal	37,959 03	
do St. Lawrence Canals....		1,991 14
do Burlington Bay Canal...		104 11
do Chambly Canal.....	3,514 84	
do Rideau Canal	284 20	
do Ottawa Canals.....	3,073 60	
do St. Peter's Canal.....		
do Newcastle Dis't Canals.	161 70	
	<hr/>	<hr/>
	44,993 37	2,095 25

Showing a decrease of. \$42,898 12

Or about 11-38 per cent.

Comparison
with New
York canals.

2. In continuation of the statistical comparisons which were given last year of the quantities of the principal articles carried through the Welland Canal, with the quantities of similar articles carried over the routes in the United States in competition with that work, similar statements will be found printed herewith.

Vegetable
food.

3. The increase or decrease in the tonnage of flour, wheat, barley, corn, oats, rye, and other vegetable food moved through the Welland Canal and through the Erie Canal, as compared with the movement of 1869—the year before the reduction of tolls on the Erie Canal took place—may be summarized as follows :—

	1870.		1871.		1872.		1873.		1874.	
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
New York Canals.....	0.58	42.03	28.53	33.97	35.69
Welland Canal.....	18.43	32.59	23.73	7.18	23.55

	1875.		1876.		1877.		1878.	
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
New York Canals...	0.22	18.29	15.07	46.83
Welland Canal.....	1.61	9.69	19.3	12.89

4. The movement of *Heavy Goods*, including iron, salt, coal, *Heavy goods*, and iron ore, shows the following result :—

	1870.		1871.		1872.		1873.		1874.	
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
New York Canals.....	15-09	1-12	18-01	19-37	3-14
Welland Canal.....	2-35	5-81	5-11	25-113	44-44

	1875.		1876.		1877.		1878.	
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
New York Canals.....	8-55	41-52	11-33	33-96
Welland Canal	1-52	9-54	7-47	0-57

Vegetable
food cleared
downwards.

5. Making a similar comparison of the tonnage of similar articles of Vegetable Food, cleared downwards at Buffalo and Tonawanda, with the quantities cleared eastward at Port Colborne, we have the following result :—

	1870.		1871.		1872.		1873.		1874.	
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
At Buffalo and Tonawanda.....	2.05	67.29	67.59	82.10	47.18
At Port Colborne.....	17.15	33.30	26.61	9.45	26.26

	1875.		1876.		1877.		1878.			
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.		
At Buffalo and Tonawanda...	29.38	0.39	55.52	109.08	
At Port Colborne.....	1.45	14.33	25.87	11.12

6. The quantities of Vegetable Food passed through the Welland Canal in transit between ports in the United States has largely decreased, as will be seen by the following statement, and the decrease in 1878 is greater as compared with 1869 than in any preceding year. There has also been a decrease in the quantities of Heavy Goods.

Goods in transit between ports in the United States.

	1870.		1871.		1872.		1873.		1874.	
	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
Vegetable Food.....	0.04	13.94	6.19	29.86	14.04
Heavy Goods.....	1.20	5.32	15.46	13.70	23.46

	1875.		1876.		1877.		1878.	
	Increase per cent.	Decrease per cent.	Increase Per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.	Increase per cent.	Decrease per cent.
Vegetable Food	13.65	46.11	49.68	52.26
Heavy Goods.....	7.03	11.56	3.04	9.24

Proportion of
freight
carried by
New York
canals and
competing
railways.

7. On reference to the returns made by the railways to the State authorities of New York, and to the canals statistics submitted to the State Legislature, I find that of the total tonnage of freight carried by the canals and railways, the State canals carried:—

In 1859.....	68.9	per cent.
1869.....	47.0	do
1870.....	38.9	do
1871.....	38.9	do
1872.....	40.1	do
1873.....	34.9	do
1874.....	31.7	do
1875.....	28.4	do
1876.....	24.6	do
1877.....	28.3	do

It will thus be seen, as will presently appear, that the total quantity of freight carried by the canals and railways was greater in 1877 by five hundred and forty-one thousand one hundred and forty-three tons than the quantity carried in 1876.

The proportion carried by canals shows an increase over the previous year.

The quantities carried are as follows:—

	Total Tonnage.	Proportion by Canals—
In 1859.....	5,485,076	·6890
1869.....	12,453,174	·4705
1870.....	15,148,274	·3895
1871.....	15,844,152	·3896
1872.....	16,631,609	·4012
1873.....	18,200,208	·3497
1874.....	18,283,547	·3174
1875.....	17,101,758	·2841
1876.....	16,948,627	·2462
1877.....	17,489,770	·2833

The above figures are the latest I have been able to obtain in a reliable form. By reference to the figures in Statement H as to the quantity of Vegetable Food carried to tide-water, it will be observed that the quantity carried by canals has increased forty-six per cent. as compared with 1869, and twenty-eight per cent. as compared with the previous year; and the quantity carried by railways has increased nearly two hundred and thirty-nine and three-quarters per cent. as compared with 1869, and forty-eight per cent. as compared with the previous year.

8. The following figures are an abstract of the quantities, for ten years, of Vegetable Food carried to tide-water by the canals and railways of the State of New York:—

Proportion of vegetable food carried by New York canals and competing railways

	Canals.	Railways.	Total.	Proportion by Canals.
1869.....	1,302,613	1,087,809	2,390,422	·545
1870.....	1,295,010	1,766,457	3,061,467	·423
1871.....	1,850,198	2,205,589	4,055,787	·456
1872.....	1,674,320	1,870,614	3,544,934	·472
1873.....	1,745,171	2,036,992	3,782,163	·461
1874.....	1,767,598	2,791,517	4,559,115	·387
1875.....	1,305,550	2,343,241	3,648,791	·357
1876.....	1,064,293	2,875,803	3,940,096	·270
1877.....	1,498,994	2,493,683	3,992,667	·375
1878.....	1,912,734	3,695,764	5,608,498	·341

From which it appears that, notwithstanding the modification of the Erie Canal tolls, the proportion of the total volume of freight of the description mentioned carried by the railways has increased from 625 per cent. in 1877 to 659 per cent. in 1878.

The tariff on the State Canals has been again modified for the current year, the rates being generally reduced, and a large proportion of the articles included in the above statement will now pass free, such as pork, beef, bacon, cheese, butter, lard, wool, flour, corn-meal, live cattle, and other articles of minor importance.

I have the honor to be, Sir,

Your obedient servant,

A. BRUNEL,

Commissioner.

DEPARTMENT OF INLAND REVENUE,

31st January, 1879.

FIFTH REPORT

OF THE

COMMISSIONER OF INLAND REVENUE

ON

WEIGHTS, MEASURES AND GAS.

To the Honorable the Minister of Inland Revenue :

SIR,—I have now the honor to submit my Fifth Report respecting the inspection of weights, measures and gas.

2. In the spring of 1877, Professor J. E. Hilgard, of the United States Coast Survey, proposed to this Department the comparison of the United States standards of lineal measure with the Dominion standards, with a view to determining some scientific questions in relation to the stability of the alloys of metal of which the bars are made. As this is a matter in which we are equally interested with reference to our standards, I gladly acceded to Mr. Hilgard's proposal, and in May, 1877, he brought the United States standard to Ottawa where an extensive series of comparisons were made, the particulars of which will be found in Appendix A. to this report.

Comparison of United States Lineal Standards with the Dominion Standards.

3. The subject is not yet finally disposed of as Mr. Hilgard considered it of sufficient importance to justify him in taking the United States Standard to Westminster, where I saw it last year, and where an additional set of comparisons have, I understand, been made, the result of which I hope to be able to publish in my next report.

Continuation of comparison of United States Standards at Westminster.

4. Some correspondence has passed between myself and Mr. CHANEY, Chief of the Standards Department at Westminster, in relation to the Roberville balance, referred to in my fifth report. This is given at page 15 of the Appendix accompanied by the diagrams given by Mr. Chaney, suggestive of modifications in construction which would remove the objections to this very convenient form of balance.

Correspondence in reference to Roberville Balance.

Correspondence in reference to false weighing.

5. In order to show how necessary an inspection of weights, measures and weighing machines had become, I have selected some correspondence on the subject which will be found at pages 31 and 32. I have selected the first two letters because they show, on the one hand, that parties carrying on the highest class of business may unwittingly do wrong either to themselves or their customers; while on the other hand it is shown that those less able to protect themselves may be grievously wronged by frauds in weighing.

Effect of distorted equal arm balance.

6. As the effect of distorted or fraudulent equal arm balances is not generally appreciated, I have prepared a diagram with an explanatory memorandum, showing how such balances may be used for fraudulent purposes. These will be found in Appendix M.

Expenses of Inspection.

7. In Appendix B there will be found a statement of the expenditure and receipts on account of the inspection of weights and measures for the year ended 30th June, 1878. The total expenses having been \$70,719.68, while the receipts were \$29,833.60. The expenses are made up as follows:—

Office rents	\$ 7,024.41
Contingencies	11,360.44
Salaries	52,334.83
Total	<u>\$70,719.68</u>

In 1876-77 the receipts amounted to \$50,375.45. The decrease is due to the reduction of the fees by 75 per cent. upon a second or subsequent verification.

Number of Weights and Measures inspected.

8. In Appendix C will be found a detailed statement of the weights and measures presented for verification during the fiscal year. The number of all descriptions may be summarily stated as follows:—

	Presented.	Verified.	Per cent. Rejected.
Weights—Dominion	103,118	102,338	·756
Tolerated	14,943	14,800	·957
Measures—Dominion	43,313	43,229	·193
Tolerated.....	7,230	6,125	15·283
Measures of Length.....	4,214	4,190	·569
Balances, &c.—Equal Arms.....	9,742	9,674	·699
Steelyards.....	1,148	1,121	2·352
Platform Scales..	14,659	14,546	·778
Irregular Weights.....	5,849	5,548	·171
Irregular Measures	Nil.	Nil.	

Of the whole number of articles offered for inspection, the number ultimately rejected forms but a small proportion, the percentage in each case is stated in a third column ; but as explained in a former report, this is no index to the number found incorrect when first examined, for the inspectors, acting on instructions, have allowed inaccurate articles to be removed and adjusted after first presentation without charging fees; and the number given above only represents the number in each case on which fees were actually collected.

9. Appendix D gives more complete details of the description of articles presented for verification, and it will be noticed that up to the close of the past fiscal year not a single 60 lb. weight has been submitted for verification. More complete details.

10. With a view to enabling the Inspectors to perform their functions more completely at the places of business of the parties whose weights and measures are inspected, forty additional sets of *portable Kits* have been procured. These have been more substantially made than those first obtained, and they have been otherwise improved. With the appliances now available, the Inspectors will be able to perform the ordinary inspection of weights, &c., used for trade purposes at the traders' shops, and it will only be necessary to convey the articles to the Inspector's Office for verification by the more reliable standards when circumstances justify the suspicion of grave inaccuracies or the result of the ordinary test is disputed, or when any legal proceedings under the Act are contemplated. Additional facilities for inspection at shops of traders.

INSPECTION OF GAS.

11. The details of the inspection of gas and gas-meters will be found in Appendices J, K and L. The general result as compared with the previous year may with reference to the inspection of meters, be summarised as follows :— Inspection of Meters.

	Presented for Verification.	Final Rejection.
1876-77.....	4,725	246
1877-78.....	4,954	285
	<hr/>	<hr/>
Increase.....	229	39

The percentage of meters rejected was in 1876-77, 5¼ per cent., and in 1877-78, 5¾ per cent.

Number of
Meters in-
spected not
increased.

12. The number of meters presented for verification in 1877-78 was considerably reduced below what it would otherwise have been by the stoppage of the inspection in St. John, N.B., during the recovery of that city from the effects of the fire. The decrease thus occasioned was not nearly compensated by the number inspected in Charlotte-town, P.E.I., Fredericton, N.B., and Brantford, Ontario, to which places the active inspection was extended during the year.

Inspection
has caused
Gas Com-
panies to be
more careful
as to accuracy
of Meters.

13. The inspection has impressed upon the managers of the gas companies the necessity of greater care in the examination of meters before they are taken into use. This is evident from the greater proportion found correct at the first test, for although the numbers finally rejected bears about the same proportion to the whole as at the commencement of the inspection, it was at the outset usually necessary to send back for readjustment a much greater proportion than at present.

ILLUMINATING POWER.

Illuminating
power of Gas.

14. A statement of the illuminating power and purity of gas inspected during the year, will be found in Appendix L. The illuminating power wherever the inspection has been made, has been remarkably good. The average being everywhere above the standard fixed by law, and there does not appear to be any adequate reason for continuing the standard in Ontario at the comparatively low rate of 12 candles, while the average has hardly ever been less than 14 candles. This would seem to justify the raising of the standard in Ontario to that which obtains in New Brunswick, Quebec and Prince Edwards Island—namely, 14 candles. The standard in Nova Scotia is 16 candles, and it is believed that there would be no great difficulty in producing gas of equal illuminating power in the other provinces, but it may not be expedient to raise the standard so high at present.

PURITY.

Improved
purity of Gas.

15. Since my last report there has been a decided improvement in the purity of gas supplied. The quantity of sulphur compounds has been reduced, and at the present time the standard quantity of sulphur is rarely exceeded. The standard fixed, by regulations made in pursuance of the Act, is 20 grains in 1,000 cubic feet of gas.

Toronto Gas.

16. In Toronto, the highest quantity found only once exceeded the standard. That happened in September, 1877; since then the highest quantity found was 17.9 grains, while the highest monthly average for the year was 15.85 grains.

17. In Montreal, sulphur was greatly in excess during the whole Montreal Gas. of the fiscal year. The highest quantity ascertained was in March, 1878, when it was 60.2 grains, and the highest monthly average, 53.35 grains, occurred in the same month. The lowest monthly average was for the month of September, 1877, when it was 24 grains. But, it is just to observe, that subsequent to the close of the fiscal year to which the appendix relates, the quantity of sulphur in the Montreal gas has been greatly reduced the average for the month of September, 1878, being only 17.87 grains; 2.13 grains below the standard.

18. The reduction of sulphur at these works is all the more satisfactory, because it has been persistently urged by the company that Reduction of Sulphur at Montreal. a reduction within the legal standard, under the circumstances in which that company is placed, is impossible.

19. In Halifax, sulphur has generally been somewhat in excess of Halifax Gas. the standard. The highest average occurred in the month of March, 1878, when it was 35.52 grains, but in October it was as low as 10.84 grains; and, of the whole number of tests, twelve were below and twenty above the standard.

20. In St. John, N.B., although the instruments for testing the St. John, N.B., Gas. purity of gas have been provided, no arrangements have yet been made for using them, the Inspector not having sufficient knowledge of chemistry to enable him to work out the tests. One test was, however, worked out by an officer sent from the department, which gave 12.75 grains as the quantity of sulphur.

21. In Quebec, the tests for sulphur have, with the exception of Quebec Gas those for January, shown a monthly average below the standard. In that month, the average was 21.94 grains, or nearly two grains above the average. The highest quantity found 29.93 grains, occurred in the same month.

22. As it was deemed necessary to test the accuracy of the analysis Analysis of Gas at Quebec, examined by Mr. Aubin. made by the Inspector in Quebec, samples of the distillates were sent to Inspector AUBIN at Montreal. The results of that officer's analysis will be found on pages 48 and 49 of the appendices. The results obtained by Mr. AUBIN do not always correspond with those given by the Quebec Inspector. As Mr. AUBIN has had a large experience, while the analysis is quite new to the Quebec Inspector, it is safest to accept Mr. AUBIN's results. From these it appears that the largest quantity of sulphur occurred in June, 1878, the

largest average 23.58, having been found in the same month. Of the forty-four tests worked out by that officer, twelve gave the quantity below the standard, and the remainder above it.

Ottawa Gas. 23. In **Ottawa**, only eleven tests were taken during the year, of which seven were below and the remainder above the standard.

Gas at other places. 24. In the other places at which gas inspection has been commenced, the tests of purity have not yet been commenced.

AMMONIA TESTS.

Ammonia in Halifax Gas. 25. There has also been an improvement in gas with reference to ammonia. In **Halifax** the gas has been entirely free from ammonia on two occasions, and it has been in excess of the standard on only five occasions out of thirty-two tests. On twenty-seven occasions it has been below the standard.

Ammonia in St. John, N.B., Gas. 26. In **St. John, N.B.**, only one test was taken during the year, the ammonia was then exactly equivalent to the standard.

Ammonia in Quebec Gas, as tested by Mr. Aubin. 27. In **Quebec** there were in all forty-nine tests for ammonia, of which forty-one were analysed by **Mr. Aubin**, and on every occasion but one, the ammonia was in excess of the standard. The highest quantity found was 75.18 grains and the lowest quantity—except in the case referred to—was 10.04 grains per 100 cubic feet. The lowest monthly average occurred in **June, 1878**, when it was 2.98 grains, or nearly one grain in excess of the standard. As the minimum quantity occurred in the last month of the year, it might have been inferred that the inspection had had the effect of inducing the Company to pay greater attention to the freeing of gas from the most objectionable of all impurities. Unfortunately this inference is precluded by the results of the analysis since the 30th **June**, which show that there has been no permanent improvement.

Ammonia in Toronto Gas. 28. In **Toronto** there has been forty-four tests for ammonia, and it has been in excess of the standard on twenty-four and below it on twenty occasions. The highest quantity found was 4.62 grains per 100 feet. On one occasion it was absent. The highest monthly average 4.17 grains, occurred in **January, 1878**, and the lowest 1.00 in **August, 1877**, and generally the highest quantity was found during the cold months. It may be said, therefore, that the elimination of ammonia from the gas supplied by the **Toronto Company** has made satisfactory progress, and there is reason to believe that the standard of purity will be ultimately reached.

29. In Montreal ammonia was largely in excess during the months of August, September and October, 1877. There was a marked and continuous improvement from January, 1878, to the end of the year. Thirty tests were taken; on eighteen occasions the ammonia was present in excess of and on twelve below the standard. The highest quantity, 30 grains, was found in September 1877, and the lowest, 1.00 grain, in May, 1878. The highest monthly average, 28.86 grains, also occurred in September, and the lowest average, 1.33 grains, in May. It is satisfactory to see that although the average quantity of ammonia in the Montreal gas was for the whole year excessive, a decided improvement took place in January, which was not only maintained but increased to the end of the year.

Ammonia in
Montreal Gas.

30. In addition to the places above-mentioned, seven tests have been taken at Ottawa by an officer attached to the inside service of the Department. The highest quantity of ammonia found was 3.75 grains, and the lowest 2.00 grains per 100 feet; the average being 2.98 grains or nearly one grain above the standard.

Ammonia in
Ottawa Gas.

31. Sulphurated hydrogen has been entirely absent from the gas supplied at Halifax, St. John, N.B., Toronto, Montreal, Hamilton, Pictou and Charlottetown. At Quebec it was present on 65 and absent on 23 occasions; at Fredericton it was present on 57 and absent on 27 occasions.

Sulphuretted
Hydrogen.

32. From the preceding summary of the results of the inspection it is evident that the gas consumer has been largely benefitted by the working of the act, which in so far as the provision for inspection goes, is fairly sufficient for the purpose. There has been a great improvement in the illuminating power of the gas supplied, and every where, except Quebec, great progress has been made in eliminating the impurities which so seriously affect the health of those who inhabit rooms where gas is burned, and which are also destructive to many classes of goods kept on the shelves of merchants and shopkeepers, as well as of many articles of great value which are kept in private residences, among which may be enumerated works of art, the binding of books, gilding and textile fabrics, especially when of silk.

Benefit of
Inspection to
consumers.

Amendment
of Law so as
to produce a
revenue.

33. In conclusion I beg to direct attention to the remarks which I have had the honor to submit in former reports, in relation to the necessity of amending the law so as to provide a revenue from inspection fees sufficient to defray the cost of this service.

All of which is respectfully submitted.

I have the honor to be, Sir,

Your most obedient servant,

A. BRUNEL,

Commissioner.

DEPARTMENT OF INLAND REVENUE,

OTTAWA, April 8, 1879.

APPENDIX A.

BUREAU OF WEIGHTS AND MEASURES.

U. S. COAST SURVEY OFFICE.

WASHINGTON, May 3, 1878.

Colonel A. BRUNEL,
Commissioner of Inland Revenue,
Ottawa, Canada.

MY DEAR SIR,—At length I have the pleasure of sending you my reduction of our comparison of standards made last Spring. I add to them the statement of the comparisons between the bronze and the iron yards in our possession which led to the doubt in regard to the permanency of Bronze No. 11. You will see that the comparisons in three different years show very nearly the same difference, leaving no doubt that No. 11 has sensibly shortened. This appears likewise to be the case with No. 16, which is in your possession.

With great regard,
Yours truly,

J. E. HILGARD.

BUREAU OF WEIGHTS AND MEASURES.

U. S. COAST SURVEY OFFICE.

WASHINGTON, May 3, 1878.

COMPARISON of British Standard Yard No. 11 with British Standard Yard No. 16 and Dominion Standard A, made in May and June 1877, by J. E. Hilgard, United States Inspector of Weights and Measures, and A. Brunel, Commissioner of Inland Revenue, Dominion of Canada.

Comparisons of Standard Yards.

The two British Standard Yards in the possession of the United States, Bronze No. 11 and Iron 57, having been compared in 1876 and again in 1877, the results indicated a relation between them differing by 0.00026 inch from that assigned in the letter of the Astronomer Royal which accompanied the bars when they were presented to the United States in 1856. After their reception these bars were not compared until the spring of 1876. The observations of 1876-77 establishing beyond doubt the fact and amount of the change in their relation, it became important to ascertain which one had changed length or whether the change was partly on both.

There being in the United States no suitable Standard Yard for the settlement of this point, attention was turned to the Standards of the Dominion of Canada. Deposited with the Commissioner of Inland Revenue, at Ottawa, are four yards of the same material as and similar in shape and construction to Bronze No. 11. They are known as Bronze No. 16 and Dominion Standards A, B, and C. The former was sent to Canada in 1857 having been previously compared with the Standard in England. Its relation to the Standard was such as to make it standard at 61° 94'. The Dominion Standards A, B, and C, were received at Ottawa in 1874. Just before being sent they had been compared with the Standard in England. From these comparisons we find Dominion Standard A to be standard at 61° 91' F.

In May, 1877, Bronze Yard No. 11 was taken to Ottawa for comparison with the Standards there in keeping. For this purpose A and No. 16 were taken. The comparisons were made in the basement of the Parliament Buildings with the new micrometric comparing apparatus, constructed for the Dominion by Troughton and Simms, an account and description of which may be found in the "Second Report of the Commissioner of Inland Revenue on the inspection of Weights, Measures and Gas, Ottawa, May 1, 1875." Comparisons were begun on May 26, and continued from day to day until June 1st, being made by Messrs Hilgard, Brunel, Russell and Wright. The illumination was obtained sometimes by daylight, sometimes by the use of illuminating lamps. The manner of illuminating appears to have no marked effect upon the results and, though generally noted, is not regarded.

The temperature was very uniform throughout the observations. The bars being all of the same material, shape and size the variations of temperature, though recorded, are not taken into account in the reductions. The temperature is so near that at which the bars are standard that the slight difference in their co-efficients of expansion are not appreciable in the reductions.

The observations of May 26 are rejected, the sun having shone upon the apparatus for some time in the early morning, and the observations being intended as merely experimental and for practice.

The values of the micrometers used were determined from the spaces of 0.02 inch on the gold pins at the bottoms of the wells of the Bronze 11. The observations give

$$\begin{array}{rcl} & & \text{Inch.} \\ \text{Value of 1 Div. of Micrometer A (right)} & = & 0.0000202 + \\ & \text{B (left)} & = 0.0000203 - \end{array}$$

Greater readings of the micrometer indicate position further to the left. We therefore subtract the readings of the "right" micrometer from those of the "left" and the greater difference corresponds to the greater length.

From the direct comparisons we have

	d	d	Inch.	From
(1) No. 16 = No. 14 +	3.12 ± 0.24	= No. 11 +	0.0000633 ± 0.0000049,	52 Obs'ns.
(2) No. 16 = A -	4.02 ± 0.17	= A -	0.0000816 ± 0.0000034,	33 "
(3) A = No. 11 +	7.95 ± 0.23	= No. 11 +	0.0001614 ± 0.0000047,	38 "

From one we have

$$\begin{array}{rcl} & & \text{Inch.} \\ \text{No. 16} & = & \text{No. 11} + 0.0000633 \end{array}$$

From (2) and (3)

$$\text{No. 16} = \text{No. 11} + 0.0000798$$

The discrepancy, = 0.0000165, is so small that it may be, without sensible error, apportioned equally among the three results, and we will have

$$\begin{array}{rcl} & \text{Inch.} & \text{Inch.} \\ \text{No. 16} & = & \text{No. 11} + 0.0000688 \pm 0.0000049 \\ \text{A} & = & \text{No. 16} + 0.0000871 \pm 0.0000034 \\ \text{A} & = & \text{No. 11} + 0.0001559 \pm 0.0000047 \end{array}$$

for the result of the comparisons of May 27 to June 1, between Bronze Yards No. 11 and 16 and Dominion Standard A.

H. W. B.

C. S. OFFICE,
March 23, 1878.

For further discussion of the subject see "Note on a change in the relative lengths of Bronze No. 11 and Iron 57."

Note on a change in the relative length of Standard Yards Bronze No. 11 and Iron No. 57.

	Bronze No. 11 relatively shorter.

APPENDIX A.—Continued.

(3). COMPARISON of Bronze Yard No. 16 and Dominion Standard A.

Date.	Observer.	No. of Observations.	A—No. 16.	—
May 31:				
10.05 a.m.....	Hilgard	4	$d.$ + 3.7	
11.40 "	Brunel	4	4.9	
12.00 m	Hilgard	2	4.0	
3.15 p.m.....	Hilgard	13	3.85	Bars interchanged.
4.45 "	Brunel.....			
Mean Difference =			$d.$ 4.02 =	0.17

Inch.
1 Div. of Micrometer = 0.0000203

Hence from the direct comparisons we have

$$\begin{aligned}
 & \text{d.} \\
 \text{No. 16} &= \text{No. 11} + 3.12 = \text{No. 11} + 0.0000633 \quad (1) \\
 \text{A} &= \text{No. 11} + 7.95 = \text{No. 11} + 0.0001614 \quad (2) \\
 \text{A} &= \text{No. 16} + 4.02 = \text{No. 16} + 0.0000816 \quad (3)
 \end{aligned}$$

From (1) we have

$$\text{No. 16} = \text{No. 11} + 0.0000633$$

From (2) and (3)

$$\text{No. 16} = \text{No. 11} + 0.0000798$$

The discrepancy = 0.0000165, is so small that it may be, without sensible error, apportioned equally among the three results, and we will have

$$\begin{aligned}
 & \text{Inch.} \quad \text{Inch.} \\
 \text{No. 16} &= \text{No. 11} + 0.0000688 \pm 0.0000049 \\
 \text{A} &= \text{No. 11} + 0.0001559 \pm 0.0000047 \\
 \text{A} &= \text{No. 16} + 0.0000871 \pm 0.0000034
 \end{aligned}$$

for the results of the comparisons of May 27 to June 1st, between Bronze Yards Nos. 11 and 16 and Dominion Standard "A."

J. E. HILGARD.

WASHINGTON, 3rd May, 1878.

BRANTFORD, 5th March, 1878.

SIR,—I send, for your private information, records of the excess and deficiency in weights tested by me in Paris, County of Brant, during the months of April, May and June in 1877. These are a fair sample of the condition in which the weights were in other parts of the county.

I desire to call your attention to the case of Mr. ———, a leading miller in this part of Ontario. His loss during the year 1876, from an excess in a barrel weight, was estimated by his clerk at \$1,260. You will also notice that the weights on his platform scales were, in nearly every case, deficient, and as these were used at his mill and storehouses in the purchase of grain, the loss from this cause must have been very large.

The condition of platform scales in the county, particularly those in use in merchants' shops, and also such as were presented by farmers, was bad almost beyond belief, and required a great deal of labour before they were made to work correctly.

Thus far this year, in the course of the second inspection, I find scales and weights in good order as a rule.

I am, yours truly,

JOHN ALLAN,

*Deputy Inspector of Weights and Measures,
County of Brant.*

A. BRUNEL, Esq., Ottawa.

YARMOUTH, October 25th, 1878.

1st. SIR,—I received your telegram this morning, and report as follows:—When I was on Cape Sable Island on the duties of inspection, I notified Reuben Smith and Elzear Crowell for inspection. What articles they brought I inspected for them. I then asked them personally if they had no other articles for inspection; their reply was that they had not.

2nd. I then noticed a schooner lying in the harbour taking on board dry fish, which I supposed they were weighing; I then got a party to put me on board and found it was Mr. Smith's schooner, and he was weighing the fish with an Equal Arm Scale. I then examined the scale and found it was incorrect. I then seized it and had it brought on shore. I then hung it up and found it would take 2 lbs. to balance it. I then took the weights, viz.: two of 56 lbs., one of 28 lbs., and one of 14 lbs. and found them to be $7\frac{3}{4}$ lbs. too heavy. I also found in the pan of the scale which contained the weights four bolts of iron, which would weigh about 4 lbs., by adding these amounts together he was actually getting $15\frac{1}{2}$ lbs. too much weight on every draught he was weighing. He, Mr. Smith, informed me that those scales belonged to Mr. Elzear Crowell and he had borrowed them to weigh the fish that he was taking on board of schooner, which would be about 700 quintals. The above I can prove by Mr. Nicholson who was with me at the time.

3rd. As regards Mr. Crowell's measures there was two of half a bushel each, one was rejected on my first tour, and the other I would not receive. The one I rejected was 25,369 grains too small, and the other was not worthy of inspection. Still he used them until I called on him for second inspection, and as he did not bring them for inspection and parties complained of him, I then thought it was my duty to seize them, which I did.

Waiting your further instructions,

I am, Sir,

Your obedient servant,

JOHN M. LECAIN.

Deputy Inspector of Weights and Measures.

A. BRUNEL, Esq., Commissioner,
Ottawa.

WEIGHTS AND MEASURES OFFICE,

DIVISION OF THREE RIVERS,

29th Nov., 1878.

A. BRUNEL, Esq.,

Commissioner of Inland Revenue,
Ottawa.

SIR,—Adolphe Millette, laborer, of the parish of Yamachiche, called at my Office this morning and lodged a complaint against Aimé Lamy, a well to do farmer, also of the parish of Yamachiche, for having sold him goods with balances and weights not verified. The complainant declares that he bought nine pounds of wool from the said Lamy and that there is wanting one pound and four ounces of the proper weight.

Circular No. 121 authorizes me to seize balances and weights not verified, but as this would cause some expense, I thought it my duty to inform you of the fact. (The expenses would amount to three dollars). It would be worth while making this seizure in order to give an example to those who are using balances and weights not verified.

Luc Bollefeuille and some few others of the parish of St. Barnabé are using balances and weights not verified, though I have notified them personally.

I have the honor to be, Sir,

Your obedient servant,

WM. CHAGNON,
D. I. W. & M.

STANDARDS DEPARTMENT,
BOARD OF TRADE, S.W.
8th March, 1878.

DEAR MR. BRUNEL,—We have to thank you for your valuable memorandum (Appendix K., 4th Report, page 77) on the Roberval balance containing Prof. Cherriman's mathematical consideration and formula.

This is a balance in which we also are much interested, as complaints have been made here of its use.

The Roberval balance proper appears to me, however, to be so excellent a weighing instrument that I am anxious to save its good name.

The Roberval balance as stamped and used in France does not, so far as we can ascertain, possess the jointed lever shown as *a., g., a.*, in the engraving, page 78, of your report, but it possesses only a single lever or rigid frame so locked at its centre or fulcrum that any displacement of the balance is difficult. (*See enclosed sketch d.*) *See Diagram No. 2.*

Imitations of the Roberval balance as shewn in the figure 154 (*See Diagram No. 1*) now enclosed, are largely used in this country. In event of any change in our law here, it is possible their use would be prohibited eventually, as it is possible to alter such imitations by substituting for the jointed lever *a., g., a.*, the single rigid lever locked as shewn at *d.* *See Diagram No. 2.*

Medhurst, of London, and Pfitzer, of Berlin, have improved on these imitations of the Roberval balance.

A good Roberval counter scale is now selling in London at a low price, 15 shillings, but it is not so convenient a form as the counter scale 154.

I remain,

Faithfully yours,

(Signed) H. J. CHANEY.

P. S.—I will send you a copy of our Weights and Measures Bill when it has passed the Commons.

The following is the diagram reprinted from the Fourth Report and referred to in Mr. Chaney's letter. The diagrams included by Mr. Chaney are also given herewith.

DIAGRAM No. 1.

No. 154 Counter Weighing Machine.

Diagram 2.

IMITATION OF ROBERVAL BALANCE,
with double jointed levers.

CHEESEMONGERS SCALE,
with Earthenware pan.

Load placed respectively at each of the five places marked.

FRENCH TOBACCONIST'S SCALE.

The right pan is nearly one grain heavy but the position of the weights in the pan does not affect the balance.

APPENDIX M.

The accompanying diagram will explain in a popular manner the principles on which a weighing beam, whose fulcrums are not in a straight line, may be applied to fraudulent weighing.

The heavy lines $a B c$ show the skeleton form of the beam. It is of the nature of a bent lever, which, it is necessary to bear in mind, will always be used under a *force* or load, acting in a truly vertical direction, $a W, c L$.

This being the case, the true lengths of the arms of the lever are $Ba' Bc'$, and so long as $B a$ is equal to $B c$, and the points $a c$ are in a horizontal plane and the loads $W L$ suspended, therefrom equal to each other, the beam will be in equilibrium.

But let the beam be moved into the position $x B y$. It is now evident from an inspection of the diagram that, practically, and in so far as it is affected by a vertical force, the arm of the lever $B a$ has been lengthened by the distance $a' x$, while the opposite arm has been shortened by a distance equal to $c' w$.

The lever has now, for practical purposes, unequal arms; and assuming that a has been loaded to bring it into the position $x B y$, a greater load will be necessary at y —now the end of the short arm of the lever—to turn the beam than is carried at x , the end of the long arm.

These conditions will be reversed when the load at y has been made sufficient to turn the beam to the position $e B d$.

This description of balance is used for fraudulent weighing in the following manner:

The weight is placed in the pan W , suspended on a , which at once brings the beam into the position $x B y$. The article to be weighed is then placed in the pan L , now suspended from y , and a greater quantity is thrown in than truly represents the weight W suspended at x ; the beam then, slowly at first, but with increasing velocity, reverses its position and assumes that indicated by $e B d$. The operator then removes part of the article being weighed—which is now suspended on the long arm of the lever—until by touching the opposite pan we find that the weight W has nearly regained its power to turn the scale, but takes care to stop before it has fully regained it. The purchaser sees that the weight kicks the beam, and is well satisfied, though he has been wronged in proportion to the difference in the distances between $B d$ and $B e'$.

The diagram is drawn in exaggerated proportions, in order that the eye may the more readily discern the effect of the malformation of the balance.

From the above description, it will be evident that such a beam as we have been considering could not fulfil the conditions laid down in section A of the Order in Council, if tested in relation thereto by the regulations in article 1, of circular 134.

This condition could be tested by a straight line applied to the fulcrum of the beam, but in practice this is a difficult test to apply, and the "*behaviour*" of the beam, under the conditions imposed by the circular, is believed to have a greater practical value, and, besides, it tests other essential qualities at the same time.

INSPECTION OF FOOD.

To the Honourable

The Minister of Inland Revenue.

SIR,—I have now the honour to submit my Third Report respecting the analysis of Food, together with the reports of the four analysts appointed under the Act, and tabulated statements prepared in the Department of the results of the analysis of the various samples submitted.

1. The following is a summary of the whole number of samples authorized to be analyzed during the year, but as the analysts from various causes were unable to complete the whole of the work submitted to them during the fiscal year, it was continued into the present year, and is embraced in the reports now submitted.

	Un-adulterated.	Returned by Analysts as being Adulterated	Not returned as Adulterated but their composition as stated by Analysts, shows that they are of doubtful purity.	Total.
Allspice	1	11		12
Baking Powder	10			10
Bread	8			8
Butter	66	12	2	80
Canned Fruit	20	4		24

Preserved Vegetables	24	3		27
Sugar	42	8		50
Sweets	46	2		48
Tea	40	11	2	53
Total	523	271	19	813

Proportion of samples adulterated. 2. From the above it will be seen that eight hundred and thirteen samples were submitted to the analysts, of which, without including sugars in which glucose was found, or chocolate or cocoa, both of which are largely composed of farinaceous and saccharine matter, two hundred and seventy-one samples, or exactly one-third, were adulterated; while as to nineteen others the analysts were in doubt.

Milk. 3, I may direct especial attention to the important article of milk, one hundred and seventy six samples of which were examined, and of these seventy, or nearly forty per cent., were found to be adulterated, and ten other samples were of doubtful character. In view of the importance which attaches to this article, I beg to direct attention to the remarks in relation thereto which I had the honour to submit in my second report, and to urge that the suggestions then made be acted upon. They were as follows :-

“Milk continues to be largely adulterated, and in reference thereto I may refer to Sections 7, 8, 9 and 10 of my first Report, to which I may add that the experience now acquired in connection with the adulteration of this important article of food is sufficient to justify the issue of specific instructions to our officers, as to what should be considered an adulteration within the meaning of the Act, and I submit that as to cases offending such rules, proceedings should be taken against the vendors either by the officers of the Department or by the parties defrauded, who should be supplied with the particulars of the adulteration.”

Butter. 4. Of the eighty samples of butter, twelve were adulterated, and two were of doubtful character. The adulterated butter was, with one exception, found in the possession of market people or small dealers. A large proportion of the samples were obtained from wholesale dealers who buy for export. The actual state of this article as supplied to the general consumer is, therefore, but imperfectly represented by the samples analyzed.

Condiments. 5. As in former years, the analysis of condiments shows that articles of that description are, almost without exception, adulterated—not with things injurious to health, but with things of inferior value, whereby the consumer pays for the ground refuse of grain and seeds, the price of articles which, if pure, would be of high value.

Coffee. 6. The same may be said with reference to coffee, for of forty-eight samples examined, only twelve were pure. The remainder comprised a small quantity of coffee, mixed with a large proportion of cheap adulterants.

7. Cocoa (or *Cacao*) and chocolate, of which there were Cocoa and Chocolate. together 96 samples examined, with five exceptions are not reported as adulterated—neither are they reported as pure. The analysts have confined themselves to stating the composition of the articles, and that they contained no article injurious to health. In this connection attention should be directed to the observations of the analysts, which will be found at pp. 5, 10, 12 of the appendices. From these observations it will be observed that they look upon chocolate as a proprietary mixture, composed of the cacao bean and other ingredients of less value, but not of a deleterious nature. These cheaper additions vary in quantity from 33 to 70 per cent. of the whole, and of course affect the real value of the manufactured article.

8. With cocoa or cacao it is different. The name implies a Adulteration of Cocoa. preparation of the cacao bean, and the admixture of any foreign matter is an adulteration, unless the purchaser is advised thereof by the label on the package in which the article is sold, or by some other equally distinct notification. This is the view taken by Dr. Larue, of Quebec, who returns five of the samples of cocoa analyzed by him as adulterated. Dr. Ellis, of Toronto, simply gives the proportion of foreign substances, and Dr. Edwards, of Montreal, treats it, with chocolate, as a proprietary preparation. But whether the one view or the other be taken, it is certain that since the value of the manufactured article is increased or diminished by the proportion which the genuine cacao paste bears to the whole, the excessive substitution of such articles as sugar, wheat flour, bean meal, animal butter or fat must be a proportionate deterioration of the value of the article, and it therefore appears reasonable, at least with regard to cocoa, that when any such foreign matter is added, the article should be considered as adulterated, unless the fact is notified to the purchaser.

9. The increasing use of potted meats, fish, &c., gives increased Potted Meats interest to their analysis. The question of adulteration is not very clearly dealt with by the analysts, but it will be observed that, with one or two exceptions, Dr. Edwards gives the samples examined by him a high character, while Dr. Larue says that some of the samples examined by him had been adulterated by the abstraction of the nutritive qualities of the meats. The only sample of anchovy paste submitted, which was examined by Dr. Edwards, is reported as containing very little essence of fish, with an excess of salt, and a mineral matter of an alluminous nature, both of which are an adulteration within the Act.

Sugar—
Glucose.

10. During the past summer considerable interest has been manifested in relation to the purity of sugar, and more recently some writers in the public press have expressed doubts as to the qualifications of the analysts. These doubts probably have their origin in the disappointment of parties who had been instrumental in having samples submitted, and as to which the results reported were not in accordance with preconceived opinions. On reference to the summary of the year's transactions, it will be seen that fifty samples of sugar were examined, of which eight are reported to be more or less adulterated. In addition to the adulterations specifically reported by the analysts, glucose was found in nearly all the samples submitted, only four samples having been entirely free from it. The quantities reported varied from a *trace* up to 14 per cent. Glucose is not considered as deleterious, and as it is recognised as a variety of sugar, its presence may not be held to be a violation of the letter of the law, though it certainly is of its spirit, for grocery sugars vended for domestic use are understood to be cane sugars, and glucose is greatly inferior in value to this description of sugar, so much so that if the sweetening power of the latter is stated at 100, that of glucose—or grape sugar—is not more than 60.

The addition of glucose to sugars imported from countries where a drawback is paid by the Government on exportation, has to the exporter the important effect of enabling him to obtain an undue amount of drawback from his Government. Glucose is made from a variety of vegetable starches, and is not subject to an excise duty where it is produced. When, therefore, a large percentage of this article is added, the drawback obtained upon it as representing that proportion of sugar, becomes an important consideration, especially when the low price of corn and potatoes permits the production of glucose from the starches of these vegetables at a cheap rate.

Expediency
of amending
Act.

11. If there is any doubt as to whether the addition of glucose is an adulteration within the strict meaning of the law, it may be necessary to consider the expediency of asking Parliament to amend the Act. But, however that may be, the public have now the opportunity of ascertaining whether the sugar they purchase is adulterated or not.

Presence of
Glucose not
always an
evidence of
intentional
adulteration]

12. It is, perhaps, only right to observe that it is not fair to assume that the presence of glucose is in all cases an evidence of intentional adulteration. Its presence in small quantities is sometimes an unintended incident in the manufacture of sugar, but its presence in large proportions can hardly be other than intentional, and it may

be necessary to fix a legal limit above which its presence should be held to be fraudulent. In the cases reported on there were eleven instances in which the quantity of glucose amounted to or exceeded ten per cent., and in eighteen other samples the quantity amounted to or exceeded five per cent.

13. During the discussions which have taken place on this subject, it has been stated that for trade purposes means are used both for giving colour to sugar and for bleaching it. The former with a view to make it apparently of a lower grade—when the grade is judged by colour—than it actually is, the latter to enhance its apparent quality without removing all the impurities; and it has been alleged that in both processes colouring or bleaching articles are used of a deleterious nature. So far none of the analysts have reported the discovery of adulterations of this character, but it is conceivable that if they are possible, exporters claiming drawback of duty might resort to such practices from motives analagous to those which suggest the addition of glucose. Other adulterations of Sugar.

14. Only nine samples of adulterated tea, and two doubtful, are reported out of a total of fifty three samples examined. Some of the adulterations are of a very bad description, and in one sample the analyst says he did not find any genuine tea. Tea.

15. There are reasons for believing that no article used for food or drink is more likely to produce diseases than impure water; the examination of water used for domestic purposes, especially that sold and distributed by carters, who are to apt to obtain it from impure sources, has therefore engaged the attention of the Department, and instructions have been given to the proper officers to take samples of water from the carters employed in selling and delivering it for domestic purposes. At this moment only one analysis of such water has been reported, but the result fully justifies the representations which induced the Department to have it analyzed. Water.

16. During the year there have been three prosecutions for offences against the Adulteration of Food Act; two for refusing samples, and one for selling adulterated milk. The last mentioned case was dismissed on a technical objection as to insufficient notice. In both the other cases convictions were obtained. One of the parties appealed and the conviction was set aside, apparently because the officer who demanded the sample did not produce his authority for doing so. In the other case, the person convicted left the country. Prosecutions during past year.

Payment for
samples.

17. There appears to be an impression that the officers of the Department take the samples for analysis without payment of their value. This is entirely erroneous. The law provides that full value shall be paid for all the samples taken, and the officers of the Department are instructed in all cases to tender payment of full value for the samples demanded by them. There is no reason for supposing that any of them have failed to do so.

Extract from
the London
(England)
Analyst.

18. As it may be interesting to know the opinions of disinterested parties as to the administration of the law, in relation to the adulteration of food in Canada, I insert in the appendix (see Appendix A), an editorial article from the *Analyst*, a periodical devoted to analytical chemistry, and published in London, England.

Respectfully submitted,

A. BRUNEL,

Commissioner of Inland Revenue.

INSPECTION OF FOOD.

APPENDIX A.

From "THE ANALYST," the Organ of the Society of Public Analysts, London, England, July, 1878.

We have received the official report of the Department of Inland Revenue for Canada, on the adulteration of food during the first part of the year 1877.

The report is in so many points instructive, not only as showing the extent to which adulteration prevails in Canada, but also as showing the methods of analysis which are adopted by the public analysts there, that we notice it at rather more length than usual.

It is one of the most exhaustive reports in its character that we ever recollect to have seen. It is quite evident that the authorities who are charged with the execution of the Adulteration Act in Canada are not disposed to allow the work which has been done by the analysts to be almost ignored—as is unfortunately the case in this country. It contains not only a general summary bearing the signature of Mr. A. Brunel, the Commissioner of Inland Revenue, but, in addition, verbatim copies of the reports of the analysts for each division, and tabulated statements of the results of every analysis, which, strange to say, are presented in tabular form, giving the percentage of each constituent, and also some 25 pages of carefully engraved copies of photographs received from our own Inland Revenue Authorities of articles used as adulterants of food and tobacco and of some of the genuine articles themselves. In its general character and the mode in which it has been compiled, the blue book is highly creditable to the department.

The first general feature observable is that the Canadian Government at any rate do not consider that the Adulteration Act is quite as limited in its character as the interpreters of our own Act in this country would seek to prove, inasmuch as Paris green, which is largely used for the purpose of destroying the Colorado beetle, forms a very large proportion of the number of samples examined, 50 out of the total of 488 being of this substance.

The report comprises separate statements from four different analysts, appointed for the districts of Toronto, Montreal, Quebec and Halifax, and a list of the samples submitted by the 11 inspectors. We are not aware that any statement has hitherto been published of the names, &c., of the Canadian public analysts; we find that for the Toronto division the analyst is W. Hodgson Ellis; for the Montreal division, J. Baker Edwards, Ph. D., D.C.L., F.C.S.; for the Quebec division, F. A. H. La Rue, M.A., M.D.; and for the Halifax division, Robert G. Fraser. The total number of samples submitted to these four analysts during the period embraced by the report was 488, of which, 247, or a fraction over 50 per cent., were found to be adulterated. Fifty of these samples were, as before mentioned, Paris green, and the other samples appear to have comprised a tolerably fair mixture of goods and condiments of all kinds, but if anything there is a leaning towards condiments rather than to articles which possess actual nutritive value. With this exception there is no fault to find with the selection. Thus far, then, the general result of the examination is somewhat akin to that which was found in England some five or six years ago, viz., that half the articles of food and drink sold were adulterated.

The general conclusions at which Mr. A. Brunel arrives are that a large proportion of the condiments submitted are adulterated, and to a very considerable extent; that coffee appears to be very largely adulterated, that nearly half the samples of butter were adulterated, and that the milk continues to be largely adulterated, while, he adds, that the experience now acquired in connection with the adulteration of this most important article of food is sufficient to justify the issue of specific instructions as to what should be considered an adulteration within the meaning of the Act.

The representative of the Canadian Inland Revenue Department, acting, we presume, on behalf of the Department, has therefore adopted the principle which the Society of Public Analysts have been urging for the last three years, viz.; that definite standards should be laid down and acted upon. In connection with this point it is of great importance to note that the standard for the analysis of milk, which has been adopted by the analysts in Canada and recognized in this Blue Book, is that fixed by the Society of Public Analysts; and that there are only one or two cases tabulated in which a milk, shewing less than 9 per cent. of solids not fat, has not been returned as adulterated, and even when this has been the case, some explanation, such as the presence of an excessive proportion of fat, is found in the report of the analyst. It may fairly be assumed, therefore, that the Canadian analysts eventually found—as our own leading analysts did—that 9 per cent. of solids not fat may fairly be taken as a percentage, which, while it does not fully protect the public, at any rate inflicts no injustice upon the vendors of milk.

The photographs of the adulterants, and some of the starches, presented to Canada by the English Inland Revenue Department, have been reproduced apparently by lithography, and with considerable care and accuracy.

We pass now to the consideration of the individual reports of the analysts. Mr. Ellis, of Toronto, appears to have examined twelve samples of tea, but unfortunately in no case were the alkaline and earthy salts present in the ash estimated. Some pains, however, were apparently taken to determine the estimation of theine present which was found to vary from .38 to 2.31 per cent. The estimations would be of greater value if the report had stated by what process their theine was determined. Three of the samples were faced, but no other adulteration was detected. In reference to coffee, adulteration with roasted wheat, peas, and beans is reported, in addition to the usual adulteration with chicory. Six samples of sugar were examined, four of which were of English make or refining, and from the figures of the analyses it is evident that they were all of extremely low quality, but no adulteration was detected. Three out of four samples of pepper were adulterated with wheat flour, while samples of cloves, allspice, and ginger were all found to contain wheat flour, Indian cornmeal, or cayenne pepper. Canned and tinned fruit and vegetables were generally reported to be of good quality, with the exception of Lima beans and French peas, both of which contained minute traces of copper. Out of eleven samples of milk, four were watered, five were deficient of cream, and only two were genuine. Twelve samples of butter were examined, but unfortunately the examination only went as far as the old process of determining the proportions of water, salt, and curds, no investigation as to the proportion of fatty acids was made. It may be of value, however, in some case in this country to point out that the maximum percentage of water found was only 10.5 per cent., and the maximum percentage of salt 5.9 per cent. The minimum proportion of butter fat in a sample marked Salt Butter was 80.80 per cent. A considerable number of the samples of Paris green, which, of course, ought to consist entirely of arsenate of copper, were adulterated with sulphate of baryta, the proportion sometimes reaching to 21 per cent.

Dr. Edwards, of Montreal, reports having examined eighty-five samples, of which fifty-eight were adulterated; he has, of course, met with the usual adulteration of skim milk, and states that the majority were so sophisticated. As to spices, he says that the husks of corn and various grains are freely mixed with them, together with such kinds of farina flour or ground rice as may best suit the texture or general appearance of the spice. At Montreal, according to Dr. Edwards, perfectly pure fresh butter is but seldom met with in the market; butterine appears to be largely sold, but not under its true name. One case of tinned vegetables had been coloured

by copper. When referring to the samples of Paris green submitted to him, he says that six out of twelve were more or less adulterated, and he draws special attention, and we think very wisely, to the dangerous results likely to occur to the water of streams used for drinking purposes, by the continued application of arsenical dressings to fields which drain into them. He concludes by pointing out that sulphur and phosphorus, carefully applied, might be more beneficial to the soil, and might be less injurious to the character of the water in the watercourses, while equally fatal to the insects it was sought to destroy.

Dr. La Rue, of Quebec, reports the analysis of twelve samples of butter, all of which were, in his opinion, pure, but, unfortunately, no determinations appear to have been made of the fatty acids or of the specific gravity; the melting point was determined, and it is stated that fusions commenced between 20 deg. and 21 deg. C., and was completed at 30 deg. and 31 deg. C. It is evident that these determinations of melting point have not been made with accuracy enough to enable them to be of any value for comparison with kindred English butters. The only adulterated samples met with in this district, were five samples of Paris green, adulterated with sulphate of baryta.

Mr. R. G. Fraser, the analyst for the Halifax division, reports the analysis of 72 samples, and says that the ground coffees were all mixed with peas or chicory in larger or smaller proportions, excepting one sample which was pure. Of six samples of pepper three were pure and three were adulterated with the husks of mustard seed and bread, the proportion of adulteration reaching in one case to 90 per cent. Perhaps the most interesting feature in Mr. Fraser's report is that having examined eight samples of milk he found that all were pure; a statement he was perfectly justified in making, for the average of the solids not fat amounted to 10.85 per cent., a pretty conclusive proof that the Canadian analysts have not erred on the side of injustice to the vendors in adopting the standard of 9 per cent. fixed by the Society of Public Analysts in this country.

A few samples were analysed of preparations of articles which appear to be included under the title of condiments, and we certainly think they deserve this title, rather than that of drugs. One sample, called Campbell's quinine wine, was found to consist of sherry wine, tincture of orange peel, citric acid, sugar, and sulphate of quinine, the proportion of the latter being half a grain per fluid ounce, and the strength 64 under proof. Another sample, marked Lyman's quinine wine, contained only one-third of a grain of sulphate of quinine per fluid ounce, and the alcoholic strength was 75 under proof, while the last sample mentioned in the list, and called Lewis's quinine port wine, is reported on as follows: "Consisting of inferior red wine (coloured with logwood), citric acid, sugar, tincture of gentian and orange, and traces of strychnia and brucia, and a small quantity of tincture of nux vomica," and it contained one third of a grain of sulphate of quinine per ounce, and the alcoholic strength was 68 under proof.

The tabulated statements at the end of the report are presented in a very valuable form, and we find there that some of the analyses have been carried to a much further extent than appears from the statements already commented upon. Thus we find that out of 49 samples of butter 10 were adulterated with foreign fats, the maximum proportion being 61 per cent. All these samples are in Dr. Edwards' district, and we may fairly presume that if the fatty acid process had been applied to the samples in the other districts the result would have been almost identical.

Mr. Ellis found one sample of cocoa coloured with venetian red, and two samples of coffee containing roasted wheat in addition to peas and chicory. Mr. Ellis also had three samples of sugar, all obtained from the same vendor, and containing common salt in proportions varying from a mere trace to 10 per cent. From the fact that the one containing the largest proportion was taken from the top of a hogshead, and the one containing the smallest proportion from the bottom of the same hogshead, it seems tolerably clear that it was merely a sample of sugar which had been wetted with sea water in transit.

From what we have written it will be seen that although we cannot congratulate Canada on having attained as great a degree of general purity with regard to articles

of food and drink as has been attained by the mother country, yet the Act so far has worked well and apparently done good service. If our own Government would follow the example set by the younger one, and publish in a blue book the names of the vendors of all those articles which were found to be adulterated, we should soon find that our percentage of adulteration would drop even lower than it has done.

APPENDIX B.

INSPECTION OF FOOD.

REPORTS OF PUBLIC ANALYSTS.

I.—TORONTO DIVISION.

TORONTO, 1st July, 1878.

To the Commissioner
of Inland R

SIR,—I beg to submit the following report of my work during the past year :

I regret that owing to illness I was unable to analyse all the samples which you directed the Inland Revenue officers to submit to me.

I have analysed 88 samples as follows :—

	Samples.	Number of samples ana- lysed.
Cocoa and Chocolate.....	16	
Pickles.....	2	
Baking Powder.....	3	
Cream of Tartar.....	3	
Pepper.....	12	
Mustard.....	12	
Spices.....	15	
Milk.....	26	
.....	88	

Cocoa and Chocolate.—The terms cocoa and chocolate are employed in a very loose way to indicate a preparation of the cocoa bean, with or without an admixture of sugar and farina ; strictly speaking “cocoa” means simply ground cocoa nibs, just as “coffee” should contain nothing but the coffee berry, while “chocolate” is professedly a mixture of cocoa with sugar and arrowroot, or some other kind of starch. Pure cocoa is, however, very rarely met with, sugar and starch being almost invariably added in large quantities. Cocoa and
Chocolate.

In many cases the fact of this admixture is stated on the label, but in no case that I have met with are the quantities of these ingredients so stated. While of the opinion that these admixtures are unnecessary, and, indeed, undesirable, as detracting from the value of the cocoa as an article of diet, I have not, as the case now stands, reported them as adulterations, but merely stated the fact of the admixture and the proportions in which the foreign ingredients have been added. Cocoa nibs contain about 50 per cent. of an oily matter, termed cocoa butter. As this large proportion of oil is unpalatable to some people, it is the practice with some manufacturers to remove a portion of it ; when this is done it should be declared on the package, and the quantity removed stated. Pure cocoa
rarely met
with.

The following table gives the result of my analysis :—

Number.	Name.	Cocoa Butter.	Sugar.	Starch.	Ash.	Remarks.
645	Epps' Cocoa.....	25·6	20	25	1·07	Arrowroot.
646	Carracas' Cocoa.....	21·0	20	60	0·54	Corn Starch.
647	Berlin Sweet Cocoa.....	31·4	40	1·7	do
648	Breakfast Chocolate.....	23·4	15	35	1·6	Flour.
649	Soluable Cocoa.....	20·3	42	1·6	Fat removed about 22p.c.
650	Chocolate.....	37·6	30	1·7
651	Chocolate.....	24·3	42	10	1·1	Corn Starch.
652	Chocolate, Meniers.....	18·6	63	1·2
653	Homœopathic Cocoa Powder.....	22·8	31	24	1·2	Arrowroot.
654	Unadulterated Chocolate..	21·2	35	23	1·1	do
655	Cadbury's Cocoa Essence	26·3	3·0	Two-thirds fat removed.
656	Rowntree's Rock Cocoa...	34·8	30	2·0
657	Epps' Cocoa Powder.....	25·6	20	25	1·07	Arrowroot.
658	Cadbury's Chocolate.....	19·5	20	20	1·7	do
659	Epps' Cocoa.....	25·6	20	25	1·07	do

Spices all more or less adulterated.

Pickles.—The pickles contained no copper or other injurious ingredient.

Baking Powder.—The samples of baking powder all contained carbonate of soda, and bitartarate of potash mixed with either flour or corn starch.

Cream of Tartar.—The samples of cream of tartar were unso-phisticated.

Pepper.—Twelve samples of pepper were examined, six black and six white. Of the white pepper three were adulterated and three pure. Of the black pepper only one was adulterated. The adul-teration in each case was flour.

Mustard.—Twelve samples were analysed; all were adulterated. The usual adulterants were flour and turmeric, but in some cases ground rice was employed.

Spices.—I have examined fifteen samples of spices; they were all adulterated.

Cinnamon.—Five samples; all mixed with flour and rice; had cassia substituted for cinnamon.

Allspice.—Five samples; all mixed with flour.

Mace.—One sample, mixed with flour.

Milk.—I analysed twelve samples of milk in December, 1877, and fourteen in June, 1878.

The twelve samples examined in December shewed a very marked improvement in the quality of the milk. For example, of twelve samples examined during the previous May, the particulars of which were stated in my last Report, only one came up to the standard of 3 per cent. of fat, and only five came up to the standard of 2.5 per cent. of fat. Of twelve analyses reported in 1876, only four shew 2.5 per cent. of fat. Of samples analyzed last December, on the other hand, only two fall below 2.5 per cent of fat, while in seven samples the percentage of fat exceeds 3. So also in 1876, the total solids reached 12 p.c. in only two samples, and in May, 1877, there were only four samples in which the total solids reached 12 p.c., whereas in December there were only two in which the total solids fell below that number.

The analysis of No. 661 shows a rather large percentage of fat, a low ash and a low specific gravity; but as the solids, not fat, were just within the mark, I have not reported it watered.

The results obtained last June were not so good. Of fourteen samples analysed, the fat fell below 2.5 per cent in eight, and only reached 3 per cent. in two, and the total solids fell below twelve in nine.

The following table will give my results.—

Date.	Number.	Specific Gravity.	Fat.	Sugar.	Caseine.	Ash.	Total Solids.	Total Solids not Fat.	Remarks.
1877.									
Dec	660	1.031	2.6	4.0	6.3	0.7	13.6	11.0	Low, specific gravity suspicious.
"	661	1.027	3.3	4.5	3.9	0.6	12.3	9.0	
"	662	1.032	2.5	4.5	5.4	0.7	13.1	10.6	Too little fat.

I have the honour to be, Sir,
Your obedient servant,

W. H. ELLIS.

II.—MONTREAL DIVISION.

MONTREAL, 1st September, 1878.

To the Commissioner of Inland Revenue,
Ottawa.

Number of
samples ana-
lysed.

SIR,—I have the honor to submit my report for the year ending July 1st, 1878, but extended to the present date, in order to include all the samples enumerated in the order of the Department received in April last, which it has not been found practicable to complete satisfactorily at an earlier date. This order comprised 277 samples of food, on which I have reported with the following results :—

No.	Nature of Samples.	Results.		
		Genuine.	Adulterated	Doubtful.
50	Milk.....	29	18	3
36	Butter	28	6	2
24	Sugar	24
24	Coffee.....	5	19
24	Tea	18	6
24	Cocoa and Chocolate	24
12	Mustard	4	8
12	Pepper.....	12
24	Spices	3	21
21	Sweets.....	20	1
6	Pickles	6
12	Potted Meats	12
8	Canned Fruit.....	6
277	Total	181	91	5

MILK.

On the important subject of milk, some useful data has been added to previous experience by the examination of milk, both from town and country, during the months of April, May, June and July, at about weekly intervals, taken by the same method, but by different officers. The results show but few doubtful samples, and the deficiency in cream, as well as dilution by water when fraudulently practised, is usually carried beyond the normal variation of rich and poor milk. The milk pipette is therefore a valuable mode of obtaining fair average samples. A similar weekly test for the rest of the year would afford valuable data for "milk standards."

BUTTER.

This subject was somewhat fully treated in the last report, and an extension of the examination of samples would show that whilst "Butterine" is sold under the name of butter in the open markets, and in some retail stores, the wholesale butter trade are quite alive to the substitution, and do not touch the article, the only instance to the contrary being one in which after giving samples for analysis, the proprietor immediately closed his store and left the city. It may be assumed that the adulteration of butter by mixed meat fats has for the time being ceased, but there are indications that it may be actively resumed in somewhat large proportions in the fall of this year under the regulations of the Act of last Session.

SUGAR.

Of the 24 samples of sugar submitted to me, five samples were "American White Refined" all practically pure; (impurities under one per cent.) Optical test equal to 99 to 100 per cent. of cane sugar.

Eight samples of Scotch Yellows, grades 15 to 21, prices 8c. to 10c. per lb., containing from 84.5 to 97.6 of cane sugar, 0.9 per cent. to 10.0 per cent of glucose, and 1.5 to 5 per cent. of moisture, containing a mere trace of chlorides, and from 0.4 to 3.5 of other impurities.

Eleven samples of raw sugars, prices 7c. to 8c., contained :

- 80.3 to 90.2 of cane sugar;
- 3.6 to 11.7 of glucose;
- 2.5 to 9.0 of moisture;
- 1.5 to 4.5 of other impurities.

No samples were submitted to me of the kind known as "American Yellows," or of "Tinted Whites." So far as the samples examined are concerned, I find no evidence of adulteration by the addition of salt, of starch, glucose, or of foreign colouring matter.

COFFEE.

The results of recent examination confirms my previous report that ground coffee is rarely to be obtained in a genuine state, and that the various admixtures are by no means confined to chicory, but comprise roasted beans, peas, wheat and other cereal corns, giving a sweet and sickly decoction, possessing but little of the stimulating and restorative effect of freshly roasted coffee beans, which are as highly valuable for aromatic oil as for their alkaloidal principal caffeine.

Coffee, rarely obtained in a genuine state.

COCOA AND CHOCOLATE.

Cocoa and chocolate.

I have only to say in regard to these preparations, that they are so essentially proprietary nostrums of a special and compounded nature, that it is scarcely possible to assume any standard of purity or of excellence. As a rule the price is a fair guide to the commercial, although not to the dietetic, value of the article manufactured. I find, however, no instance of fraudulent substitution of unwholesome ingredients, and only two samples of marked inferiority of manufacture, which are indicated by the marginal remarks.

TEA.

Tea.

The number and variety of the samples examined has not yet been sufficient to enable me to comment on the general character of the teas in the Canadian market. From the samples submitted to me I am disposed to think that the public suffer more from the sale of teas of greatly deteriorated quality and depreciated value than from any systematic mode of adulteration by foreign leaves, substituted for tea. Some samples indeed have been brought under my notice which can scarcely be called tea, and which contain no genuine tea leaves, but these have been sold at so low a price as should caution the purchaser that he cannot expect foreign tea leaves at the prices quoted, viz: 15 to 20 cents per pound. It is suggested that such commodities get into consumption only in lumber districts and under labour contracts, but as the article, like the "pea coffee," is utterly worthless, its supply should if possible, be suppressed.

CONDIMENTS AND SPICES

Condiments and spices largely adulterated.

Continue to be generally and largely adulterated, and but little effort is made to conceal the sophistication. The adulterants, however, are generally of a harmless and diluent character only.

CONFECTIONERY.

Confectionery.

The sweets I have examined have been chiefly of the better class of sugar sweets, and I have only met with one instance of adulteration with mineral ingredients; the number and class of samples does not, however, enable me at present to give any general opinion on the extent or nature of adulteration among the cheaper class of sweets.

PICKLES.

Pickles.

The pickles examined were from various manufacturers, and all free from copper.

POTTED MEATS AND FISH.

Potted meats and fish.

Some of these of old importations from Europe had suffered much in flavour from long keeping, but none of them were in any injurious state of decay or decomposition.

Those of Canadian manufacture, however, compared very favourably in this respect, and especially the fresh canned meats and boiulle were of excellent quality and condition. The canned salmon from British Columbia was of fine flavour and well preserved. The canned lobster from the east coast, was, however, unequal in quality, and some quite inferior and unwholesome.

CANNED FRUITS.

I find no adulteration practised in the preparation of these fruits, but I observe differences of excellence in the ripeness and quality of the fruit, which affects not only the flavour, but also the wholesomeness of the product as food.

In several instances where the fruit has been canned in an unripe state, the vegetable acid juices have attacked the solder of the tins, and dissolved a notable quantity, both of lead and of tin, and the syrupy liquid has thus become impregnated. Although the quantity of dissolved lead is very minute, it cannot be regarded as unimportant, its insidious and cumulative poisonous effects being so capricious and so idiosyncratic, that it should, if possible, be banished from every article of food. The absence of every trace of metallic impurity in the other samples examined shows that this source of danger may be avoided by the selection of good and ripe fruit.

Canned
in an unripe
state the acid
attacks
solder.

TEMPERANCE BEVERAGES.

The question has arisen (in connection with our public parks) whether the malt liquors sold as Lager beer and Wiess beer are intoxicating liquors. Several samples of these beers, and of the root beer called Niagara Beer, were submitted to me by the Department last summer, and I then found the percentage of alcohol in Niagara Beer to range from $1\frac{1}{2}$ to $2\frac{1}{2}$ per cent.; in Lager beer from 3 to $4\frac{1}{2}$ per cent.; in hop beer or wiess beer from $4\frac{1}{2}$ to 5 per cent. In some recent examinations of Wiess beer on behalf of the Provincial Revenue, I have found the percentage of alcohol range from 3 up to 6 per cent., the beer being still in a fermentiscible condition, and containing available glucose for the production of more alcohol. The police magistrate, in one of these cases, convicted the defendant under the Provincial Act, for selling "malt liquor, containing an intoxicating principle," without a license.

Temperance
beverages.

WATER.

The sale of water for household purposes, and as an article of food, appears to me to be a question of some considerable public importance, and one which, if not already contemplated under the Food Act, might very properly be so included.

Facts have been brought under my notice as to the sale of water in suburban districts taken from sources known to contain sewage matter, and also a case in which water was contaminated with Lead; these were cases deserving of official investigation and publicity, but unfortunately the proper authorities to undertake such enquiries could not be found. Such contaminations are undoubtedly, at least as important in a water supply as in any other article of food, and probably capable of doing more wide spread mischief, in the spread of malaria of a typhoid character.

I have the honor to be, Sir,
Your obedient servant,

J. BAKER EDWARDS,
Ph.D., D.C.L., F.C.S.,
Public Analyst.

III.—QUEBEC DIVISION.

(Translation.)

QUEBEC, 12th November, 1877.

A. BRUNEL, Esq.,
Commissioner.

SIR,—Herein enclosed you will find my "Remarks" on the last samples examined by me.

*Baking Powder.*Baking
Powder.

In the two samples which I examined, the quantity of farinaceous substance which I found mixed with tartaric acid and the carbonate of soda, was in one instance 10 per cent. and in the other 50 per cent.

Addition of
farinaceous
substances.

The object of the addition of these farinaceous substances is, without doubt, the subdivision of the two chemical ingredients in such way as to obtain a slower, and consequently a more uniform, effervescence in the sponge. How much of these farinaceous substances is it lawful to mix with the two chemical ingredients? I cannot answer the question. If, on the one hand, a too large proportion of flour may interfere with the effervescence, and consequently with the action of the powder in causing the rising of the sponge, on the other, a too large proportion of tartaric acid and carbonate of soda, might prove injurious to health by the introduction of too large a quantity of tartarate of soda into the stomach. Account must also be taken of the quantity to be used, which is mentioned in the printed directions.

Thus, of *Durkee's powder*, which contains 10 per cent. of farinaceous matter, the quantity prescribed is two tea spoonfuls; while of the *chemical yeast* or *baking powder*, which contains 50 per cent. of farinaceous matter, the quantity to be used is three table spoonfuls.

*Cocoa and Chocolate.*Cocoa and
Chocolate.

I have classed as *adulterated* the five specimens of *cocoa* which I examined, and as *not adulterated* the five samples of *chocolate*, although the composition of the latter was very nearly the same as that of the former. But, contrary to the opinion of many persons, the words *cocoa* and *chocolate* are not synonymous. In fact the word *cocoa* or *cacao*, is used to describe a tree growing in the Indies, and by extension the fruit of that tree. The word *chocolate*, on the contrary, is applied to a *compound* or *mixture*, into the formation of which a greater or less quantity of *cocoa* enters, together with a certain proportion of some description of meal, sugar, &c., the presence of meal in the *chocolate*, which is recognized in trade as an artificial mixture, does not therefore constitute an adulteration; but the presence of the same meal in *cocoa*, which is a natural product, and which does not naturally contain, it *does* constitute an *adulteration*.

The words
not synonymous

I am aware, however, that certain English manufacturers class the two articles as one and the same, and use the two words *cocoa* and *chocolate* as synonymous. It remains to be decided how far

manufacturers are to be allowed thus to exchange the value of words. In the French language the two words *cocoa* and *chocolate*, are never interpreted as synonymous.

Cod Liver Oil.

Formerly the cod liver oil offered for sale in this city, as *Cod Liver Oil* elsewhere, was considerably adulterated by the admixture of other oils. Now in view of the low price at which that product can be obtained in this district, those adulterations are no longer practised. Our apothecaries now sell only the pale oil; there is no longer any demand for the brown oil.

Bread.

I was under the impression that the bakers in Quebec added a *Bread* considerable proportion of mashed potatoes to the sponge. By microscopic examination I did not detect the presence of any of the amylaceous cells of the potato. In a conversation which I have since held on the subject, with a former baker who has now retired, I learned that the potato is only used in the preparation of the leaven, and that the quantity so used is very small. By this somewhat prolonged contact with the yeast, all the fecula, evidently, is transformed into glucose.

Milk.

Among the samples of milk examined some were found to have *Milk, skim med.* been skimmed.

I am told that certain dealers make a business of selling skimmed milk; some notify the consumer and sell such milk at a lower price; but all do not carry their scruples so far, and No. 729 was sold as pure milk and at the same price as unskimmed milk.

F. A. H. LARUE, M.A., M.D.
Inspecting Chemist.

QUEBEC, September 28th, 1878.

To the Commissioner of
Inland Revenue, Ottawa.

SIR,—I have the honour to transmit you the following remarks and observations relative to the analyses which I made under orders from the Department, dated April 4th, 1878.

Pickles.

Scarcely any but "Crosse & Blackwell's" pickles are to be *Pickles.* found at the Quebec grocers. The labels of this commercial house are somewhat varied, the colors of certain letters are not always the same. However, the Crosse & Blackwell samples which I have examined were perfectly pure.

The sample labelled "John Moir & Son" of a conspicuous green color, was found to be of excellent quality.

The samples marked with the names of "Copland" and of "Lawrence" had evidently lain for some time on the store shelves.

The sample labelled "Wyatt & Co." found by accident, must have been very old, if I judge by the proportion of sulphuric acid it contained.

No traces of arsenic.

It is often mentioned in the treatises on medicine toxicology, that arsenious acid (arsenic) is found in the pickle vinegar; query of very great importance in certain cases of poisoning. No trace of arsenic was found in any of the samples which I have examined, not even in that of "Wyatt & Co.," although contaminated with sulphuric acid.

I have the same remark to state on the subject of salts of copper, of which no trace was found in the samples examined by me.

Potted Meats.

Potted meats. All the potted meats which I have examined were found to be in a perfect state of preservation, but all were not prepared with the same skill and care; at the head of such establishments a competent cook is the first requisite. A glance at the result of my analyses will convince one that those cooks have to the present day been behind the knowledge of their task.

Nutrient extracted previous to potting.

To my surprise, I discovered that fraud is resorted to in the preparation of these potted meats, which probably accounts for the discredit into which they have fallen. For example, the roasted meats, such as beef steak, roast beef, roast veal, roast mutton, &c., are prepared in the following manner. Juice is first extracted by ebullition, and with this juice soups are made. Then these meats, thus deprived of their nutritive substance, are packed in cans and the vacuum is filled with more or less gelatine, and a kind of brown sauce which is always the same.

It is easily understood that those roasted meats have but little nutritive properties.

These preparations of potted meats could be done very cheap in Canada; and the products might become an object of great importance for exportation. But it would be necessary, in order to attain this end, that the Government should watch the manufacturing very closely.

Tea.

Tea. According to my analyses good tea can be had in Quebec for sixty (60) cents a pound. All the samples which had cost only thirty (30) cents a pound (with the exception of No. 779) contained less than 1.20 per cent. of theine. In the green teas I found no trace of copper.

Canned Fruits.

Canned Fruits. A great number of these were impaired in their appearance and flavour. This result must be attributed mostly to their old age.

Spices.

Spices. As in preceding years, spices are always strongly adulterated with sundry mealy substances.

Coffee.

Coffee. Good ground coffee can be procured in Quebec for fifty (50) cents a pound, under this price ground coffee is generally adulterated with various kinds of burnt meal, or with succory.

Tea and coffee are often used in medicine as *stimulants*. They Tea. derive their stimulant properties from the *theine and caffeine* which they contain, these being immediate principles, which succory or mealy substances do not contain. The knowledge of the cost of these two articles is therefore important for medical men; it is a first guarantee of their degree of genuineness.

Sweets.

With the exception of No. 1135, all the samples of sweets Sweets. which I examined were of excellent quality. In none of them did I find the slightest trace of mineral colouring substance. No. 1135 contained much starch in the raw state; such sweets are hard to digest.

Sugars.

Nearly all the raw sugars examined have been found of the worst Sugars. quality. They were mixtures of glutinous appearance and sticky, overloaded with glucose.

In a preceding report I have expressed the opinion that this excess of glucose was probably due to the fraudulent introduction of artificial glucose prepared with amylaceous matter. My last analyses confirm these conjectures.

Butter.

None of the samples of fresh or salt butter contained any of this Butter. artificial fatty substance named "Butterine." This kind of adulteration appears to be still unknown in my district, and, in fact, would have no reason to exist. At this present moment excellent butter can be had in the Quebec markets for the low price of twelve and fifteen cents a pound. Many of the samples had been badly prepared; this is a blame which has often been laid on our French Canadian agricultural people, blame well deserved which our agricultural papers often charge them with. They do not dry their butter sufficiently or do the salting badly.

Milk.

As in my preceding analyses, I found several samples which had Milk. been skimmed. This is a fact of great importance, when one considers that milk is the principal ingredient of food for children and sick people.

I have the honor to be, Sir,
Your most obedient servant,

(Signed) F. A. H. LARUE, M.A., M.D.

IV.—HALIFAX DIVISION.

HALIFAX, 1st October, 1877.

To the Commissioner of Inland Revenue.

SIR,—For the quarter ending 30th September, I have received :—

Number of
samples ana-
lysed.

Nine samples of cocoa and chocolate.
 Ten samples of milk.
 Two samples of baking powder.
 Two samples of cod liver oil.
 Two samples of bread.
 Three samples of cream of tartar.
 Two samples of pickles.

The chocolates are all mixed with sugar and flour or farina.

No. 578 contains 47 per cent of sugar.

No. 579 contains a small percentage of flour.

No. 580 contains 10 per cent. arrowroot and 20 per cent. sugar.

No. 582 contains 21 per cent. of sugar.

No. 583 contains a small percentage of flour.

No. 586 contains 53 per cent. of sugar, and only 9 per cent. of fat.

No. 588 contains 23 per cent. of sugar and 10 per cent. arrowroot.

No. 589 contains 50 per cent. of farina.

No. 590 contains 25 per cent. of sugar.

No. 571 contains bread from good wheat flour, with a small percentage of salt and 38 per cent. of water.

No. 576 contains bread from good wheat flour, with a small percentage of salt and 34 per cent. of water.

No. 572 contains mixed pickles, vinegar, spices and pickles only.

No. 573 contains mixed pickles, vinegar, spices and pickles only.

No. 574 contains baking powder, composed of 25 per cent. of cream of tartar, 38 per cent. of carbonate of soda, and 37 per cent. of wheaten flour.

No. 587. Baking powder, composed of 20 per cent. cream of tartar, 15 per cent. of carbonate of soda, and 65 per cent. of wheaten flour and farina.

No. 575 contains cream of tartar, nearly pure, only 0.76 tartarate of lime.

No. 577 contains cream of tartar, nearly pure, 2.76 tartarate of lime.

No. 581 contains cream of tartar, nearly pure, 2.40 tartarate of lime.

No. 584 contains cod liver oil, pure and fresh.

No. 585 contains cod liver oil, pure and fresh.

Of the ten samples of milk, Nos. 1 to 6 have a very low percentage of cream, and are evidently mixed with skimmed milk.

No. 7 gave a large percentage of cream, 5.15, but it could not have been an average sample, as the solids, not fat, were only 8.20 and the ash 0.5, so the milk must have had water added.

No.	Name of Vendor.	Residence of Producer.	Cream.	Solids not Fat.	Ash.	Specific Gravity.
1	Mrs. McDonald.....	Richmond.....	2.0	9.25	0.6	1030.
2	Mrs. Collins.....	North West Arm.	2.5	8.8	0.7	1027.
3	Mrs. Schuppe.....	Dartmouth.....	2.5	8.0	0.6	1026.
4	do	Truro.....	2.15	9.25	0.7	1021.
5	John Gould.....	Elmsdale.....	2.2	8.9	0.7	1031.
6	Mrs. Waugh.....	Halifax.....	2.4	12.0	0.7	1038.
7	Davidson.....	Shubenacadie.....	5.15	8.2	0.5	1027.
8	John Etter.....	do	3.0	12.0	0.6	1025.
9	Mrs. Cary.....	Dartmouth.....	4.5	8.8	6.6
10	Mrs. Ryan	Halifax.....	3.3	11.4	0.7	1032.

The solid matter from No. 4 had a very strong, disagreeable odour.

ROBERT G. FRASER.

HALIFAX, 9th July, 1878.

A BRUNEL, Esq.,
Commissioner of Inland Revenue.

SIR,—I have the honour to submit the following report of my analyses during the past three months, viz.:—

Twenty-five samples of milk.
Twelve samples of sugars.
Twelve samples of teas.
Six samples of mustard.
Eleven samples of ground spices.
One sample of ground ginger.
Six samples of ground peppers.
Twelve samples of ground coffees.
Eleven samples of chocolate and cocoas.
Two samples of confectionery.
Three samples of preserves, jelly and jams.
One sample of pickles.
Two samples of preserved meats.
Eighteen samples of butter.

Number of
samples ana-
lysed.

Of these 122 samples I have reported 52 adulterated and 71 genuine.

MILKS.

Two samples watered and eight deficient in cream.

MUSTARDS.

Six samples mixed with wheaten flour.

SPICES.

Nine samples mixed with corn meal, ground rice, rice husks and ground toasted peas.

PEPPERS.

Four samples mixed with corn meal, ground rice and rice husks.

COFFEES.

Twelve samples mixed with peas and chicory.

CHOCOLATE AND COCOA.

Ten samples mixed with sugar and farina. Chocolate and cocoa are usually sold mixed with these substances.

GROUND GINGER.

One sample mixed with corn meal.

SUGARS.

All genuine; no adulteration.

TEAS.

No adulteration; some samples much broken and mixed with a few foreign and withered leaves.

CONFECTIONERY.

No adulteration or injurious colouring.

PRESERVES, JAMS AND JELLIES.

No adulteration.

PICKLES.

No adulteration or injurious colouring.

PRESERVED MEATS (SAUSAGES.)

No adulteration.

BUTTERS.

No adulteration or excess of salt or water.

Your obedient servant,

ROBERT G. FRASER.

— —

The following is a Tabular Statement of my results to 30th June, '78.

Description of Sample.	Number Analyzed.	Genuine.	Adulterated.	Nature of Adulteration.	Remarks.
Milk.....	35	18	17	Water.....	13 deficient in cream ; 4 watered.
Sugars.....	12	12	No adulteration.	
Teas.....	12	12	do	No adulteration. Some samples much broken and mixed with a few foreign and withered leaves.
Mustards.....	6	6	Wheaten flour..	Mixed with wheaten flour.
Ground Spices...	12	3	9	Cornmeal, &c....	Mixed with cornmeal, ground rice, husks, and ground roasted peas.
do Ginger..	1	1	Cornmeal	
do Pepper..	5	1	4	Cornmeal, &c....	Mixed with cornmeal, ground rice and husks.
do Coffee...	12	12	Peas and chicory	Largely adulterated.
Chocolate, Cocoa and Broma	20	1	19	Sugar and farina	Chocolate and Cocoa usually contain farina and sugar. One sample old and very acid and unfit for food.
Confectionery....	2	2	No adulteration.	No adulteration or injurious coloring.
Preserves, Jams and Jellies.....	3	3	do	No adulteration.
Pickles, Mixed...	3	3	do	No adulteration or injurious coloring.
Preserved Meats.	2	2	do	No adulteration.
Butter	18	18	do	No foreign fats or excess of salt or water.
Baking Powder..	2	2	do	A mixture of farina, cream of tartar and bicarbonate of soda.
Cod Liver Oil....	2	2	do	No adulteration ; fresh and good.
Bread	2	2	do	No adulteration.
Cream of Tartar	3	3	do	No adulteration.

APPENDIX D.—INSPECTION OF FOOD.

TABULATED Statement of the Results of Analysis of Food, for the Fiscal Year ending 30th June, 1878.

CANNED FRUIT.

Date.	Name of Analyst.	Division.	No. of Analyst's Report.	Vendor.	Results of Analysis, and Remarks by Analyst.
1878.					
Aug. 29...	J. B. Edwards.....	Montreal	1417	J. Hudon & Co.....	Peaches, contains unripe fruit, the acids of which have acted on the iron of the tin ; valueless as desert fruit, and only fit for tarts.
do 29...	do	do	1418	do	Pine-apple, coarse and unripe fruit, containing nothing specially injurious to health.
do 30...	do	do	1419	D. Hutton & Co.....	Peaches, containing good ripe fruit, free from metallic impurity.
do 30...	do	do	1420	do	Pine-apple, the fruit hard and stringy, no metallic impurity.
do 30...	do	do	1421	D. C. Brosseau.....	Tomatoes, ripe fruit, and containing no metallic impurity.
do 30...	do	do	1422	W. H. Richardson.....	Tomatoes, good and ripe fruit, with no metallic impurity.
do 30...	do	do	1423	Baird & Co.....	Apricots, contains poor fruit, containing traces of iron, lead and tin.
do 30...	do	do	1424	Thos. Crathern.....	Apricots, contains good and ripe fruit, with no metallic impurity.
April 30...	F. A. H. LaRue.....	Quebec.....	745	Adam Waters.....	Tomato soup, excellent.
do 30...	do	do	780	Charles Cyprien	Blueberries, badly prepared ; no injurious substances.
do 30...	do	do	781	Adam Waters.....	Pine-apple, excellent.
do 30...	do	do	782	do	Pears, bad, not mature enough.
do 30...	do	do	783	do	Peaches, excellent.
do 30...	do	do	784	do	Strawberries, pretty good.
do 30...	do	do	785	do	Raspberries, bad.
do 30...	do	do	786	do	Gooseberries, badly preserved.
do 26...	do	do	1147	do	Portugal apricots, excellent.
do 26...	do	do	1148	do	Raspberries, middling.
do 26...	do	do	1149	do	Strawberries, pretty good.
do 26...	do	do	1150	do	Whortleberries, middling.
do 26...	do	do	1151	do	Damsons, middling.
June 30...	R. G. Fraser.....	Halifax.....	1240	Mrs. Austin.....	Strawberry and sugar, no adulteration.
do 30...	do	do	1211	Moir & Co.....	Fruit, juice and sugar do
do 30...	do	do	1242	James W. Betcher.....	do do

CASSIA.

June 21...	R. G. Fraser.....	Halifax.....	997	James Scott.....	No adulteration. } <i>Memo</i> —Cassia in this market is sold by the
do 21...	do	do	998	Brown & Webb.....	do } name of cinnamon, but at price of cassia.
do 21...	do	do	999	John P. Mott.....	Mixture of 50 per cent. ground cassia and 50 per cent. cornmeal.
do 21...	do	do	1000	Lordly & Stimpson.....	Mixture of 90 per cent. ground cassia and 10 per cent. cornmeal.

CLOVES.

July 1...	W. H. Ellis.....	Toronto.....	1506	C. Beaty.....	Mixed with flour.
do 1...	do	do	1508	James Lumsden	Largely adulterated with flour.
do 1...	do	do	1511	John Jeffs	do do
do 1...	do	do	1515	J. J. Funston.....	do do
Aug. 27...	J. B. Edwards	Montreal	1413	P. Grace	Adulterated to the extent of 20 per cent. with roasted cereal grain and pea meal.
do 27...	do	do	1414	Jas. Mullen.....	Adulterated to the extent of 20 per cent. with roasted pea meal and cereal grain.
do 27...	do	do	1415	Bryaoutte & Frères.....	Adulterated to the extent of 10 to 15 per cent. with clove bark and cereal refuse.
do 27...	do	do	1416	Ed. Elliott	Adulterated to the extent of 20 per cent. with pea meal and other cereal sweepings.
June 24...	F. A. H. LaRue.....	Quebec.....	1136	E. Paradis	Three-quarters cloves, one quarter farina.
do 24...	do	do	1137	J. B. Martel	Pure.
do 24...	do	do	1138	A. Pare	Three-quarters cloves, one quarter farina.
do 24...	do	do	1139	M. McMillan.....	do do
do 24...	do	do	1140	O. Vaucelle.....	Pure.
do 24...	do	do	1141	F. X. Gingras	Three-quarters cloves, one quarter farina.
do 30...	R. G. Fraser.....	Halifax.....	1201	Lordly & Stimpson.....	Adulterated with 35 per cent. toasted peas.
do 30...	do	do	1202	James Scott.....	Adulterated with 30 per cent. cornmeal.
do 30...	do	do	1203	Brown & Webb	No adulteration
do 30...	do	do	1204	John P. Mott.....	Mixture of 50 per cent. ground cloves, 25 per cent. stalks of cloves, and 25 per cent. ground allspice.

CINNAMON.

July 3...	W. H. Ellis.....	Toronto.....	1504	Charles Beaty	Adulterated with flour.
do ...	do	do	1507	James Lumsden	Largely adulterated with flour.
do ...	do	do	1510	John Jeffs	Adulterated with cassia and flour.
do ...	do	do	1514	J. J. Funston	do do
do ...	do	do	1517	P. Mulqueen	do do
August 27	J. B. Edwards	Montreal.....	1409	N. Daurais & Frères.....	Genuine ground cassia, sold as cinnamon.
do ...	do	do	1410	P. Grace	do do
do ...	do	do	1411	J. Hutchison	do do
do ...	do	do	1412	James Mullen.....	Ground cassia, adulterated with about 10 per cent. pea meal.

TEA.

Date.	Name of Analyst.	Division.	No. of Analyst's Report.	Vendor.	Results of Analysis.				Remarks by the Analyst.
					Extractive	Tea Leaves.	Theine.	Ash.	
1878.									
Feb. 28...	J. B. Edwards...	Montreal.....	851	Laurie, Wright & Co...	30.0	68.0	1.2	6.0	Genuine tea, probably Japan tea mixed with Hyson; volatile matter, 2 per cent. N.B.—The peculiar character of the leaves are concealed by the mode of preparation, and this is doubtless a compound of several varieties of tea. It appears, however, to be composed of tea leaves only, and is remarkable for rapid infusion, which at once extracts the whole virtue of the tea. Several qualities of this tea are in the market.
do 28...	do	do	852	do	40.3	59.7	1.80	5.90	This appears to be genuine tea and of good quality for the price at which it is sold; it, however, is exhausted at the first infusion; possesses little volatile matter. Any adulteration of other leaves would be difficult of detection under the conditions in which the tea is sold. Several qualities of this tea are sold, of which this is the lowest and unobjectionable.
April 25...	do	do	867	Stroud Bros.....	21.0	1.0	7.0	Mixed Japan and green tea, with much stalk, not adulterated.
do 25...	do	do	868	do	21.0	none.	7.0	Very poor black tea, much broken and decayed; probably mixed with exhausted tea leaves.
do 25...	do	do	869	do	30.0	2.0	5.4	Japan tea of fair quality.
do 25...	do	do	870	D. Crawford.....	34.0	1.50	6.0	Young Hyson of fair quality.
do 25...	do	do	871	do	30.0	1.30	5.2	Consists of old Congou tea, genuine.
do 25...	do	do	884	Laurie, Wright & Co...	28.0	1.6	4.0	A fine quality of black tea.
do 25...	do	do	885	do	29.1	1.8	4.2	A fine quality of black tea.
do 25...	do	do	886	do	28.0	1.6	4.8	Black tea of fine quality.
do 30...	do	do	887	do	28.3	1.8	4.1	Genuine black tea of good quality.
do 30...	do	do	888	do	34.0	1.0	3.0	Genuine Japan tea.
do 30...	do	do	889	do	38.0	2.0	3.0	Young Hyson tea of superior quality.
do 30...	do	do	890	C. Barbeau.....	18.0	none.	12.0	A mixture of leaves and stalks of various unknown shrubs, and contains no genuine tea.

APPENDIX D.—INSPECTION OF FOOD.—Tabulated Statement, &c.—Continued.

TEA.—Continued.

REPORT
OF THE
DEPARTMENT OF THE INTERIOR
FOR THE
YEAR ENDING 30TH JUNE, 1878.

*To His Excellency the Right Honorable Sir JOHN DOUGLAS SUTHERLAND CAMPBELL,
Marquis of Lorne, Governor-General of Canada, &c., &c.*

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honor to lay before Your Excellency the Report of the Department of the Interior, for the year ended 30th June, 1878.

This Report, although nominally confined to business transacted within the statutory fiscal year, will be observed to contain, in conformity with the practice which has prevailed since the organization of the Department in July, 1873, an account of everything of importance transpiring in connection with Indian Affairs, up to the close of the calendar year, and in connection with the Surveyor-General's Branch, up to the 31st October.

During the early portion of the year, owing to the death of Lieutenant-Colonel W. F. Coffin, Commissioner of Ordnance and Admiralty Lands, the branch over which that gentleman presided with so much zeal and ability, was merged in the Dominion Lands Branch, and the duties so long and satisfactorily performed by the late Commissioner accordingly devolved upon the Surveyor-General.

In the month of November last, the charge of the North-West Mounted Police was transferred to this Department, from the Department of the Secretary of State; so that the several Branches through which the operations of the Department of the Interior are conducted, now stand as follows:—

North-West Territories.
District of Keewatin.
Indians and Indian Lands.
Dominion Lands.
Geological Survey.
North-West Mounted Police.

The General Appendices accompanying this Report consist, as usual, of the Reports of the Heads of Branches at the seat of Government, with the reports of their several subordinate officers and agents in the different Provinces of the Dominion.

In consequence of the abolition of the Ordnance and Admiralty Lands Branch, and the devolution upon the Surveyor-General of the duties formerly discharged by the Commissioner, the usual account of the transactions of the year in that class of public lands is incorporated in the Report of the Dominion Lands Branch, and no longer appears separately.

The results of the investigations conducted by the staff of the Geological Survey, under the direction of Professor Selwyn, F.R.S., will be laid before Parliament, as usual, in a separate volume. A *resume* of the transactions of the Survey, however, is herewith submitted.

The North-West Mounted Police Branch having been so recently attached to this Department, the Report for the past year of Lieutenant-Colonel MacLeod, the Commissioner, has been submitted to Your Excellency by the Secretary of State.

NORTH-WEST TERRITORIES.

There has been a considerable influx of population into Manitoba and the North-West Territories during the year, the immigration being very largely directed to the flourishing settlements at Pembina Mountain, Prince Albert, and the Little Saskatchewan.

In April ast, a valuable addition was made to the North-West Council in the appointment of Mr. Pascal Breland, a half-breed native of the Territories.

That body, therefore, now consists of the Lieutenant-Governor and four Councillors,—Messrs. Ryan and Richardson, Stipendiary Magistrates, members *ex officio*; Lieutenant-Colonel MacLeod, C.M.G., Commissioner of North-West Mounted Police, and Mr. P. Breland, trader.

On the 10th July, His Honor Lieutenant-Governor Laird convened the Council for the transaction of legislative business. The session closed on the 2nd of August, on which day, all the members being present, eleven Ordinances were finally passed. These Ordinances were duly transmitted through the Secretary of State to this Department, and copies thereof were laid before both Houses of Parliament a few days ago, as required by law.

The Lieutenant-Governor, Hon. Mr. Laird, finding his duties as Indian Superintendent to conflict somewhat with those devolving upon him as head of the Executive Government of the Territories, sent in his resignation of that office some time ago. Your Excellency was pleased to accept of the same, and Mr. M. G. Dickieson, Agent for Indian Treaty No. 6, is now provisionally in charge of the North-West Superintendency.

INDIANS.

The opération of the Department during the past year in connection with Indian management in the older Provinces, as well as in the Provinces of British Columbia and Manitoba, and the North-West Territories, are fully treated of in the report of the Deputy Superintendent General, and in the reports of the various local Indian Superintendents and Agents, contained in General Appendix, Part I.

Notwithstanding that no new Indian treaties were negotiated during the year, and nothing occurred of any exceptional or special nature, there has been such an increase in the correspondence and general business of the Branch charged with the management of Indian affairs, as to tax to the utmost the energies of the Deputy Superintendent and his various officers.

INDIAN RESERVE, BRITISH COLUMBIA.

The most important of the past year's transactions was that connected with the allotment of reserves to the Indians of the interior of British Columbia.

It is gratifying to observe, from the report of Mr. G. M. Sproat, the Special Commissioner appointed to conduct this service, that satisfactory progress has been made, reserves having been set apart along the Fraser River from Yale to Lytton, and along the Thompson as far north as Hat Creek, as well as in the valleys of the Rivers Nicola and Similkameen.

The work was begun this year at a point near O'Soyoos, on the United States frontier, where it had been discontinued last year.

The Indian land question, within the territory extending 200 miles back from the coast, has been adjusted throughout the southern portion of the Province, and it may be said to have been done with much satisfaction to the Indians and with as little interference as possible with the claims of white people.

The Commissioner reports that the Indians did not express any dissatisfaction at the reduction made by the Order in Council of the 8th March, 1878, in the number of the Commissioners appointed in the first instance to allot their reserves; but on

the contrary, they seemed better satisfied to deal with one white chief than with three, the respective duties and positions of whom, on the Board, they did not understand.

Two surveying parties were employed during the past season in surveying the boundaries of the reserves allotted by the Commissioners in 1877, and satisfactory progress has been made in that work.

It is due to Mr. Sproat, the Commissioner at present employed in allotting the reserves, to state that the work connected therewith appears to be conducted by him with a proper regard to efficiency and economy.

Attendant upon the work of apportioning the reserves, the inauguration of a new system of administering Indian affairs in British Columbia will be necessary, as the existing one is found to be defective, and would be quite unsuited to the condition of affairs incident upon the transfer of the readjusted reserves to the Dominion.

INDIAN FISHING RIGHTS IN BRITISH COLUMBIA.

Intense jealousy exists in the minds of the Indians of British Columbia respecting their fishing rights, and they complain bitterly of interference on the part of white fishermen and fish canning companies with these rights at certain stations, where they have for years fished unmolested, and which they had learned to consider their own exclusive property.

Great care will be necessary in dealing with a question of so delicate a nature as is involved in fishing rights claimed by these semi-barbarous tribes.

Correspondence relative to this question has already passed between this Department and the Department of Marine and Fisheries.

INDIANS OF THE NORTH-WEST.

The rapid disappearance of the buffalo, which is the staple article of food of the Indians and half-breeds of the North-West Territories, induces the belief that these people must in a few years be fed at the expense of the country, unless they in the meantime acquire some other means of subsistence than the buffalo hunt now affords. In order to enable them to become self-supporting as soon as possible, facilities must be provided by which they may acquire some practical knowledge of agriculture and of the care of stock.

They will probably require some small supply of provisions each year while they are engaged in tilling and sowing their lands. Such assistance, however, should only be extended to those Indians who prove to be in earnest in endeavoring to become self-subsisting.

The bands in the vicinity of the Rocky Mountains appear to prefer stock raising to agriculture, and they will be encouraged to become owners of herds of cattle.

MANITOBA AND KEEWAYDIN.

The Indians of Manitoba, Keewaydin, and those whose reserves are in the vicinity of Lake Manitoba, will not be so seriously affected by the disappearance of the buffalo, inasmuch as they depend principally upon fish and game, together with root crops, for their subsistence.

REFUGEE INDIANS FROM THE UNITED STATES.

I regret to have to report that no disposition has been shown by Sitting Bull and the other Indian chiefs and warriors from the United States, who took refuge in the Dominion in 1877, to return to their own country and to their proper allegiance.

I am not without hopes, however, that the necessity for their moving southerly in order to obtain subsistence, which is not unlikely to arise at an early period in consequence, as reported, of recent extensive migrations of the buffalo from Canadian to United States Territory, may bring about an opportunity which may be successfully availed of by the Government of the United States to make peace with these Indians, who, it is only just to them to say, have behaved remarkably well ever since they crossed into Canada.

DOMINION LANDS.

The returns for the past year indicate that the transactions in these lands have increased so rapidly as nearly to equal those of the three previous years taken together, the area entered shewing a total of 682,591 acres. This is also an increase of nearly 75 per cent. over the previous year.

HALF-BREED LAND GRANT.

The allotment of the land set apart for the half-breed children in Manitoba has been effected for the parishes of Ste. Agathe and St. Charles, but five parishes remain for which allotments are yet to be made.

Scrip to half-breed heads of families and their heirs, also in commutation of hay and common right, and to original white settlers, was issued for 375 claims, amounting to \$62,538.

The number of patents issued during the year was 2,357.

ORDNANCE AND ADMIRALTY LANDS.

Owing to the continued commercial depression throughout the country, it was not deemed expedient to make any extensive sales. To this, more than to arrears of payment of land dues, is to be attributed the decrease which appears in the annual revenue from these lands. The receipts for the year amounted to \$46,255.62.

SURVEYS.

The needs of settlement hitherto having been sufficiently met by the large area that had been previously laid out into townships, but little additional township subdivision was done this year, three surveys only, in the vicinity of Prince Albert settlement, in the North-West Territory, covering ten townships, having been given out.

Satisfactory progress was made with the special survey of standard meridians and parallels, a total length of four hundred miles of line having been established and marked in the field.

Surveys of the settlements of Prince Albert and St. Laurent, on the Saskatchewan, in the North-West Territory, were made; also a small survey involving the alteration of certain lines in the settlement belt in the Parish of Ste. Agathe, in Manitoba. In that Province the survey of highways was continued during the year, 193 miles being reported as having been completed.

GEOLOGICAL SURVEY OF CANADA 1878.

The progress of the work of the geological and natural history survey has been satisfactory.

The limited amount of the annual appropriation, however, alluded to in the last report of the Department, still continued to prevent the scope and objects of the survey, as laid down in the "Act to make better provision respecting the Geological and Natural History Survey of Canada, and for the maintenance of the Museum in connection therewith," from being carried out.

PARIS EXHIBITION.

Early in February the Director left Montreal for Paris, to superintend the arrangement of the mineral and geological collections sent from the Dominion to the Universal Exhibition, and to attend the meetings of the International Geological Congress, which assembled in August. He arrived in Paris on the 25th February, and with the exception of a short absence in the latter part of August and the beginning of September, was in daily attendance at the Exhibition, or engaged on work connected with it up to the 29th of November.

The highest prizes, viz., diplomas, equal to gold medals, were awarded to the Canadian geological maps and collections.

His Royal Highness the Prince of Wales, in his capacity as President of the British Commission, requested Mr. Selwyn to act as British Juror in class XVI., maps and geographical and cosmographical apparatus, and he was elected president of this jury, involving a very considerable amount of daily arduous work from the first meeting of the jury on the 10th of June till the termination of its labors in August.

SEASON'S OPERATIONS.

Complete arrangements having been made by the director before leaving Canada for the season's operations of the survey, no trouble in the work has arisen from his prolonged absence, from the 3rd of February to the 30th of December.

Surveys and explorations have been carried on during the year in the following localities:—

1. British Columbia:—In the Queen Charlotte and Vancouver Islands.
2. The North-West Territories:—Eastern shore of Lake Winnipeg, and the Nelson River and the Hayes' River routes to Fort York, on Hudson's Bay.
3. Quebec:—In Ottawa County, the Eastern Townships, the Lower St. Lawrence and the Schickschock Mountains.
4. New Brunswick:—In Albert, Westmoreland, Kings, St. John and Charlotte Counties.
5. Nova Scotia:—In Cape Breton, Richmond, Inverness and Guysboro' Counties.

BRITISH COLUMBIA.

In British Columbia the greater part of the season was devoted by Dr. G. M. Dawson to a geological and geographical exploration and survey of a part of the Queen Charlotte Islands, with special reference to the deposits of anthracite coal which occur at Skidegate.

Attention was also paid to the climate and natural resources of the islands, including the fisheries. It was found necessary to carry a running survey along the eastern and northern coasts.

This, when laid down, will form a trustworthy map on which many harbors and inlets not previously known are represented.

An examination was also made of the coal measure rocks of Quatsino Sound, on the west coast of Vancouver Island, and also those extending from Beaver Harbor to the Nimkish River. It would appear that, besides these, there are several small basins of similiar rocks on Vancouver Island, and on the mainland adjacent which have not yet been examined, but in some of which workable coal seams may yet be formed.

VALLEY OF THE NELSON RIVER.

From Norway House to Fort York, on Hudson's Bay, a track survey has been made by Dr. R. Bell of the route *via* Oxford and Knee Lakes, and Hill, Steel and Hayes' Rivers. A similar survey with numerous soundings was also made off the mouth of the Nelson River, and up it for a distance of about ninety miles, or to the first rapids.

An instrumental survey was made of the immediate neighborhood of York Factory, and the latitude and magnetic variation determined.

Returning to Norway House a survey was carried from Lake Winnipeg down the Nelson River to a point about half-way to the sea, a distance, following the bends of the river, of about 200 miles, leaving a portion, probably of about 100 miles, unsurveyed.

On Lake Winnipeg the eastern shore was examined and a track survey made of it from the outlet at the Nelson River to the Dog's Head Narrows, a distance of about 170 miles, connecting with the previous examination from the south made in 1874. From the Narrows, the western shore was followed and similarly surveyed for a distance of about 70 miles, or to a point some distance south of that reached by the Dominion land surveys from Red River.

In addition to the ordinary general appendices, there will be found accompanying this Report a special appendix, consisting of a summary of the observations of Dr. Bell, in connection with the above service.

Dr. Bell's provisional report contains, in addition to the specific data he was commissioned to collect, much that is new, instructive, and interesting with respect to the tract of country lying between the outlet of Lake Winnipeg at Norway House, and the mouths of the Hayes, Nelson, and Churchill Rivers. The positive information he is enabled to give with respect to its climate and producing capacities is gratifying, and dispels many of the popular impressions which formerly prevailed regarding that region.

PROVINCE OF QUEBEC.

In Quebec, Mr. H. G. Vennor's attention has been devoted to carefully tracing out and mapping the distribution of the phosphate-bearing rocks. These have now been followed in a northerly direction to a point nearly 96 miles from the Ottawa River, and eastward to the Township of Grenville.

The area over which workable deposits of phosphate may probably be discovered is thus greatly extended, and the particular belt of country within which such deposits should be sought can be very closely indicated.

Neither its eastern nor western limits have, however, yet been ascertained, but there appears to be good ground for predicting that the phosphate belt will be found to recur in the region between Lake Nipissing and the Georgian Bay, as well as in portions of the country to the north and north-east of Grenville.

NEW BRUNSWICK.

In New Brunswick, the surveys have included about 930 miles of measurements of coast line, roads and streams, and large and interesting collections of rocks and fossils have been made.

NOVA SCOTIA.

In Nova Scotia, the topographical survey of Cumberland County was continued by Mr. Scott Barlow. About 75 miles of the coast line on the Bay of Fundy and the Basin of Mines were carefully measured, completing the survey of the south and west shores of Cumberland County, with the exception of about ten miles around Cape Chignecto. The principal roads and brooks were likewise measured, about 400 miles in all being thus surveyed. A number of interesting geological specimens, rocks, and fossils, were collected, but the geological structure of the district has yet to be worked out, the topographical survey being an essential preliminary operation.

In Cape Breton Island, the combined geological and topographical survey has been continued by Mr. Fletcher, the work having now embraced nearly the whole of the Counties of Cape Breton and Richmond, and a portion of Victoria and Inverness, forming a connected survey from Sydney and Louisburg to the Straits of Canso. The survey was also carried during the past season to the west side of the Straits of Canso, including the tract of country lying north of Chedabucto Bay, and eastward of a line from Guysboro' Harbour to Little Tracadie. The detailed reports of the season's work are now being prepared, and will be published as early as possible.

PALÆONTOLOGICAL RESEARCHES.

The second part of the first volume of Canadian Mesozoic Fossils has been completed, and is now in the press. It contains rather more than 100 octavo pages of text, and is illustrated by ten lithographic plates. It was hoped that this report would have been issued before the close of the year, but its publication has been delayed in consequence of the illness of the artist, Mr. A. H. Foord, before the last two plates were finished.

In compliance with a request from Mr. Alex. Murray, Director of the Geological Survey of Newfoundland, a collection of fossils from the Menevian Acadian Groups of the south-eastern extremity of that Island has been examined and reported on, and a short paper on some of the specimens has been contributed to the September number of the American Journal of Science and Arts.

As far as possible duplicates of each of the species have been retained for the museum, and the rest have been determined, labelled and returned to Mr. Murray.

During the early part of September a week was spent in collecting fossils from the limestone of the levis formation in the vicinity of Bedford, St. Armand and Phillipsburg. A large and interesting collection was also made during the summer by Mr. Weston from the same formation, in the Gaspé Peninsula.

The lower silurian fossils of Manitoba in the museum of the survey have been mounted, classified and partly studied, as have also a number of Devonian corals, shells, &c., collected by Prof. Bell, in 1877, from the neighborhood of Hudson's Bay.

A series of lower cretaceous and tertiary fossils from various parts of British Columbia have also been examined, and some notes on the species have been prepared for insertion in Dr. G. M. Dawson's report on his explorations and surveys in that Province.

A paper on the marine invertebrata, collected by Mr. Richardson in 1874-75, in the Gulf of Georgia, and off the coast of British Columbia, has been published in the last number of the Canadian Naturalist.

CHEMICAL AND MINERALOGICAL DEPARTMENT

In the Chemical and Mineralogical Department of the Survey much important work has been done, including the analysis of a number of minerals of scientific interest, and also the analysis or assay of various specimens of gold-bearing quartz, silver, copper, and iron ores, coals, &c. Among the minerals analyzed are several from the North Ottawa apatite region, which affords a field of much interest for mineralogical investigation. Collections of minerals from this region have been made by Dr. Harrington, and are now being studied by him and arranged in the museum.

During the year Mr. Hoffman has been almost exclusively occupied with the analysis of specimens of Canadian apatite. This mineral, as is well known, has of late been attracting much attention, and it was deemed very desirable that its true composition should be established by a series of complete analysis.

The catalogue of the economic minerals sent to the Paris Exposition, prepared by Dr. Harrington, includes, besides a list of the specimens exhibited, a series of articles containing a large amount of information relating to the mineral resources of the Dominion. It was translated in Paris and has been printed in French.

THE MUSEUM.

In the museum some improvements have been made during the year. The stratigraphical collection of rocks has been considerably enlarged, and ten new glass table show-cases with thirty drawers have been procured for their accommodation, and for that of the additional mineral collections.

Maps, showing the distribution of all the known economic minerals in the Dominion, have been prepared and are now exhibited in the museum.

A larger number than usual of valuable reports, maps, and memoirs have been presented to the library in exchange for the publications of the survey, of which 835 copies have been distributed.

Thirty-nine catalogued and named collections of Canadian minerals, rocks and fossils, containing over 2,000 specimens, have been presented to various educational institutions, scientific societies and individuals in the Dominion and in foreign countries.

During the year, 1899 persons visited the museum, being an increase of 247 as compared with the previous corresponding twelve months.

All of which is respectfully submitted.

JOHN A. MACDONALD

Minister of the Interior.

OTTAWA, 10th April, 1879.

REPORT
OF THE
DEPUTY SUPERINTENDENT-GENERAL
OF
INDIAN AFFAIRS.

DEPARTMENT OF THE INTERIOR,

INDIAN BRANCH,

OTTAWA, 31st December, 1878.

To the Right Honourable

Sir JOHN A. MACDONALD, K.C.B.,

Superintendent-General of Indian Affairs.

Sir,—I have the honor, in accordance with the regulations of the Department, to submit the following Report on Indian Affairs for the year, as regards the financial data contained therein, ended the 30th June, 1878, and in respect to matters of more general interest for the year ended this day.

The condition of the Indians settled on Reserves within the older Provinces is encouraging.

More inclination for, and greater progress in agriculture is observable among them.

Intemperance has become of more rare occurrence; and the physical health of the several Bands during the present year has been for the most part good.

In the newer Provinces and more remote Territories of the Dominion, Indians have not yet learned the value of agriculture. As, however, the game and fish on which they now rely for subsistence (notably the buffalo in the North-West and the salmon in British Columbia) become scarce, they must turn their attention to tilling the soil or raising stock to enable them to live.

And as there is every indication of these Indians at an early date being deprived of the staples of life above referred to, it becomes incumbent upon the Government to adopt early and energetic measures to prepare them for the change in their mode of living and sustaining themselves and families, which must inevitably take place, when they can no longer kill sufficient buffalo and fish wherewith to feed themselves and families.

Instructions in farming, or herding and raising cattle (as the character of the country inhabited by the different Tribes may indicate to be best) should be furnished to the Indians, and in such manner as will effectually accomplish, within the shortest period, the object sought for, namely, to make them self-supporting.

The Indians should be encouraged by precept, and, when necessary, by pecuniary aid to erect houses and barns.

The use of the tent and wigwam should be discouraged as much as possible, and every effort should be made to induce them to abandon their old habits of life and to adopt those of the White man.

Their Reserves should be subdivided into lots, and each head of a family should receive a location ticket, covering the land to which he is entitled (which land, of course, as stipulated under the Treaties is non-transferable.)

A school should be established on each of the Reserves, on which one has not already been established, as soon as there is a sufficient number of families settled thereon to warrant it; and competent teachers should be appointed to these schools, who should possess, besides their other attainments, a knowledge of farming, or of herding and raising cattle (as the circumstances of the country may require), and this knowledge should be utilized for the instruction of the Indians in either occupation.

The Indians of British Columbia are for the most part already self-supporting, and the work of rendering them entirely so cannot be effectually entered upon until the Reserves in that Province,—some of which have been, and the others are being allotted to the Indians by the Commissioners employed for that purpose—have been regularly transferred by the Provincial to the Dominion Government.

There is, however, nothing to prevent operations towards this much-to-be-desired end being initiated and vigorously prosecuted in the North-West Territories and in the Province of Manitoba, under the supervision of competent and reliable men, who, in turn, should have over them an Inspecting Officer, possessing the very best attainments, and of unimpeachable integrity, whose duty, among other matters, it would be to go from one Reserve to another and mark the progress being made by the Indians in their industries, and see that the men employed to instruct the Indians in farming or herding and raising stock attend to their duties.

The Inspecting Officer should also be the medium for the purchase of cattle, seed, implements, &c., for the Indians, and he should regulate the points and dates at which the payment of annuities shall be made. The dates of payment might be so arranged that the Inspecting Officer could be present at each point to hear any complaints that the Indians might have to make, see that everything was conducted properly, and, if possible, settle any differences that might arise and, if this were not possible, he could report the particulars to the Superintendent-General of Indian Affairs for decision.

The Inspecting Officer at present employed in connection with Indian matters within the territory covered by Treaties 1, 2, 3 and 5 would be quite equal to the duties thus demanded of him.

Another similar officer would be required for the territory covered by Treaties 4, 6 and 7, which fall within the North-West Superintendency; or as regards the Indians of Treaty No. 7, as well as for that portion of territory covered by Treaty No. 4, which lies west of "Old Wives Lake, the Commissioners of the North-West Mounted Police, at Fort MacLeod, or one of his subordinate officers, might act as Indian Inspector for the same.

SCHOOLS.

The erection of school houses on the four following Reserves within the Parry Sound District, Ontario, was authorized early in the present year, viz.: Parry Island, Shawanaga, Henvey's Inlet and Lake Nipissing.

Of these proposed school buildings, that at Parry Island has been built and the school is already in operation; the school house at Henvey's Inlet has been commenced, and will, it is expected, be completed early in the spring; and negotiations are being had with the Chief of the Shawanaga Band (who is an industrious and practical man) to build the school house on that reserve.

The Indians of Lake Nipissing, owing to the distance at which the different families composing the Band reside from each other, are debarred from the advantages of a school, as the Agent reports that no central point can be fixed upon in such close proximity to the various families as will admit of a sufficient number of children attending a school if established thereat.

Aid to the extent of \$100 per annum was promised by the Department to each of the schools above referred to when established; and the several Bands interested have each agreed to contribute a similar amount towards the teacher's salary.

Assistance at the rate of \$200 each per annum was promised to schools when established upon the following Reserves: at Blind River, Lacloche, and White Fish River. The same to be paid from the date at which the Department is advised that said schools are in operation (under competent teachers) with an average daily attendance of at least one quarter of the number of children of school age in the Band.

With the exception of the school on Blind River, none of these schools have yet been brought into operation.

The Ontario Government during the past year deposited to the credit of Indian funds the sum of \$1,598.45 (being the unexpended balance of the surplus municipal fund of that Province apportioned to the Wikwemikong Indians of Manitoulin Island); with the object of the sum in question being appropriated towards making repairs and additions to the school buildings at Wikwemikong; the work to be paid for on receipt of certificates of progress from the Indian Superintendent at Manitowaning.

Two new school houses were erected on the Tyendinaga Reserve, at an expense to the Mohawk Band at that place of \$350.00 and \$335.00 respectively, to replace one that was destroyed by fire, and another which had become too dilapidated through age for further use.

A new school house is being erected by the Pottawattamies on Walpole Island; the Department agreeing to advance, from the funds of that Band, the sum of \$75.00 towards the same; the Indians to pay the balance by subscriptions.

The Christian Island Band is also erecting, at a cost to their funds of \$460.00, a building containing accommodation both for school purposes and for council meetings.

The Indians of Cockburn Island, wishing to have a school for their children during the winter, the number of those of school age being however but 15, applied through the Local Superintendent for a grant of \$50 towards the teacher's salary during the winter months (the Indians agreeing to board and lodge the teacher.) The grant asked for has been promised, and will be paid upon receipt of returns showing the attendance at the school.

I am pleased to be able to report the practical interest displayed by the Six Nation Indian Council in their schools, of which there are 11 upon their Reserves. The Six Nations had until recently contributed nothing towards the support of these schools:—the same being, with the exception of a small grant to each of \$50 per annum from the general school fund of the Department, entirely sustained (9) by the New England Company, and (2) by the Wesleyan Methodist Society.

The Six Nation Indian Council, however, recently voted the sum of \$1,500 per annum towards the support of these schools; the New England Company to contribute a similar amount, and the Wesleyan Methodist Society to continue their present contribution of \$400, if they will not agree to augment it; and the Department to continue its contribution of \$550 per annum.

A new School Board was established, consisting of three representatives of the New England Company, and three of the Six Nations, with their Superintendent. And should the Wesleyan Methodist Society unite in the scheme, that body will be allowed one representative on the Board.

This arrangement having been submitted to His Excellency in Council, it was approved of by Order in Council of the 18th November last.

The Mohawk Institute near Brantford is also conducted in the interests of the Six Nation and other Indians, under the auspices and at the expense of the New England Company. It is an industrial and boarding school whereat the male pupils are taught, besides the ordinary branches of education, farming and the different trades, and the girls learn sewing, tailoring, knitting and housewifery.

I had the pleasure last spring of visiting this Institution, and gladly place on record

the gratification it afforded me, to see how efficiently the Institution was conducted, under the active supervision of Mr. Ashton, the Principal, and his assistants.

The children looked healthy, clean, well-dressed, and quite contented.

Mr. Ashton was good enough to have them examined before me in their several studies; and I have much pleasure in stating that their proficiency in the several branches of education is remarkable, and would be considered creditable even for White children.

The cleanliness and comfort which characterizes all the different departments of the Institution is exceedingly praiseworthy; and one could not but feel thankful that, outside of the Department, there should be a company having such a deep interest in the welfare of the Indian race as to found an Institution of the kind, for the benefit of the rising generation of Indians.

His Excellency was pleased, by Order in Council of the 13th December last, to direct that a grant of \$600 per annum made by Order in Council of the 5th December, 1873, for the maintenance of several aged and infirm Indians of the Chippewa Indian Band in an Infirmary, which it was proposed to establish in connection with the Shingwauk Home at Sault Ste. Marie, but which was never brought into operation, should be diverted from that object, and applied for the current year towards the building of a new industrial Institution for Indian girls, now in course of erection near Sault Ste. Marie, which is known as the Wa-wa-nosh Home; said amount to be subsequently applied annually towards the educational and industrial training of 15 pupils at that Institution at the rate of \$40 each.

The Institution is already in operation, one wing of the proposed building having been erected; and it is expected that the building will be completed, and the Institution thoroughly organized at an early date.

I referred in my report of last year to the good work being done by the other Industrial School, known as the Shingwauk Home (now devoted entirely to the training of Indian boys) near Sault Ste Marie; which Institution, as well as that for girls just referred to, is under the able management of the Rev. Mr. Wilson.

The school on the Bear River Reserve, in the County of Annapolis, Nova Scotia, which I stated in my report of last year had been closed, was, I am happy now to be able to state, re-opened last spring, and is reported by the Agent to be efficiently conducted.

The school on the Reserve at Eskasonie, in the County of Cape Breton, Nova Scotia, was closed during the interval between the discharge of one teacher and the engagement of another. The school is again, however, in operation, and is apparently conducted with efficiency.

A movement has been inaugurated towards establishing a school on the Reserve near Memramcook, in the County of Westmoreland, New Brunswick, and it is hoped that the same will be carried to a successful issue.

Application has been made through the local agent at Fort Francis to have four schools established on the following Reserves: at the Forks, Long Sault Rapids, Lac Seul, and Mattawan; which Reserves are situated within the limits covered by Treaty No. 3.

On the two first above named Reserves schools had been established by the Church Missionary Society; but owing to some disagreement between the Indians and the teachers, or in consequence of the Indians having taken offence at their not having been consulted by the Church Missionary Society before they established the schools, they objected to their being continued, and consequently they had to be abandoned.

As soon as certain information, which has been asked for, has been furnished by the Agent at Fort Francis, the question of establishing schools at the points above mentioned will be submitted for consideration.

Under authority of an Order in Council of the 17th of July last, a school was established on the Broken Head River Reserve, within the territory covered by Treaty No. 1.

In addition to his other attainments, it is required that the teacher of this school shall possess a knowledge of farming, in order that he may give instructions to the Indians in that art.

A school was also established at the Pas, in the Cumberland District, within the territory covered by Treaty No. 5.

The same additional requirements in the teacher of this school was also insisted upon, as in the case of the school just before referred to.

Under authority of an Order in Council of the 30th September, 1878, a school was authorized to be established on the Reserve near Islington, at the confluence of the White Dog and Winnipeg Rivers, within the limits of Treaty No. 3.

The teacher of this school is also required to possess, besides the usual attainments, a knowledge of farming, and to give instructions therein to the Indians.

The North St. Peters school was closed in February by the Trustees, owing, they assert, to the immoral character of the teacher.

The school was not re-opened until the month of June, when a new teacher was put in charge of it.

The closing of this school caused much dissatisfaction among the Indians; but inasmuch as it was supported jointly by the Church Missionary Society and by the Department, and was attended by White as well as Indian children, and the school house, it is understood, stands upon land owned by the Church Missionary Society, the Department could not interfere with the action of the trustees in closing it.

Since the school has been re-opened, it appears from reports received to be in a flourishing condition, and to be attended by quite a number of Indian children.

I am happy to report that some of the Indians of New Brunswick appear anxious to have schools established among them. It is, however, difficult to induce them to assist in erecting the buildings required for the schools.

Quarterly Returns have been regularly received from the various schools supported by the Indian Branch of your Department.

Ontario.

Negotiations were had with the Government of Ontario, with a view to induce that Government to assist in the construction of a road traversing the Batchewana Bay tract on Lake Superior, within which the Department has several townships containing lands well adapted for settlement; but which, owing to the want of communication with other parts of the country, have been hitherto unsaleable. I am happy to say that the negotiations were successful; the Government of Ontario agreeing to bear one half of the expense of the construction of the proposed road, on the condition that the road be made gradually, and, that a larger sum than \$2,000 be not expended annually thereon; of which amount the Ontario Government will contribute one half, and the Department the balance.

This road will connect with the Grand Northern Road, from the Bruce Mines to Sault Ste. Marie.

The work of constructing the road in question, which was commenced during the past summer, will be resumed next spring, and will be continued from year to year, until the whole road is completed.

The lands within the townships through which the road will pass, will doubtless be settled as fast as the road is made.

The Government of Ontario, by an Order in Council dated 31st December, 1877, vested in the Government of the Dominion, in trust for the Ojibibeway Band at Shawanaga, lots 34 and 35 in the 7th concession of that township; the same to be held for the use of said Indians for so long a time as they shall continue to occupy them.

An occasion for this grant arose from the fact that the Band in question had erected houses and had made gardens upon those two lots, erroneously supposing that they formed part of their Reserve; from which the said lots are, however, some miles distant; and the Ontario Government generously concluded not to disturb the Indians in their occupation of the same.

The Indian Lands Agency, which I stated in my report of last year was to be established at Wiarton, in the County of Bruce, was opened for business on the 1st of January, 1878, under the charge of Mr. B. B. Miller.

A great advantage is thus afforded the purchasers of Indian lands in the Counties of Bruce and Grey in the Saugeen Peninsula by having the Agency for the sale of those lands so conveniently situated.

The timber limits within the townships of Pennefather, Kars, Aweres, and part of Vankoughnet, composing altogether 88 square miles, having been offered to competition among several applicants, were sold to Messrs. McDonald & Sills, of Toronto; their offer being the most advantageous received, namely, a bonus of \$724 in addition to ground rent and dues, which are to be paid according to tariff.

The wharf and storehouse belonging to the Department at Manitowaning, on the Manitoulin Island, were repaired, and a lease thereof for three years was issued to a responsible person at the rate of \$150 per annum, with the understanding that his charges for storage and wharfage should not exceed the rates mentioned in a tariff submitted and approved of by the Department.

Many of the Islands in the River St. Lawrence and Lake St. Francis, belonging to the Iroquois of St. Regis, having become vacant, owing to the expiration of the leases of the same, it was considered advisable to have an inspection made of those Islands.

This service was performed by the Indian Agent stationed at Dundee, and several of those Islands have since been leased at remunerative rates.

Assistance was given to the extent of \$986, towards the improvement of roads, in the vicinity of the village of Kagawong and Kagawong Lake, on the Manitoulin Island; with a view to open up for settlement a quantity of good land in that locality, which will no doubt be soon taken up, owing to the better road accommodation now afforded.

In consequence of the increased demands for lands on Manitoulin, Cockburn and Barrie Islands, surveys were made of three townships on the first named Island; and the lands on the two last named Islands were also surveyed.

Mr. Charles B. Savage was appointed Indian Lands Agent at Gore Bay, Manitoulin Island, which is in the vicinity of the lands lately surveyed.

He has also within his Agency the lands in the town plot of Gore Bay, and also those in the adjoining township of Gordon.

Mr. Savage is remunerated for his services by the usual percentage on receipts, and a salary of \$200 per annum.

The whole amount of his income is not, however, to exceed \$600 per annum.

The Mississagua Indians of Alnwick, in the County of Northumberland, having expressed a desire that the portions of their Reserve proposed to be leased for their benefit should be surveyed, a sub-division survey of the said lands was authorized, and is now being made.

The lands in question have been hitherto leased by the Indians themselves at unremunerative rates. Leases granted by Indians being illegal, it was considered advisable to obtain a surrender of the lands from the Indians, with a view to their being regularly leased by the Department at profitable rates for their benefit.

A very important claim has been made by the Mississagua Indians of Rice, Mud and Scugog Lakes, as well as by the Chippewas of Lakes Huron and Simcoe, to a very large tract of land lying north of the 45th degree of latitude and extending between the Ottawa River on the east, and a line due south from Lake Nipissing on the west. These Indians assert that they never surrendered the land in question; and no record can be found among the archives of this Department, or among those in the Crown Lands Department of the Province of Ontario, of any surrender of the tract.

The assertion of the Indians is consequently so far borne out; and they would appear to be entitled to compensation for the lands included within the tract described.

These lands for the most part have been surveyed and comprise many townships; and much of the land was sold by the Government of the late Province of Canada, and since Confederation by the Government of Ontario to settlers, and the timber thereon to a large extent has been disposed of to lumberers.

The Ojibway Band of Indians, who, in the year 1859 surrendered the Reserve which belonged to them, and which is situated on the Thessalon River, on the north shore of Lake Huron, on the understanding that they would remove to the Garden River Reserve near Sault Ste. Marie, and that the land covered by the surrender was to be sold for their benefit—having failed to take up land on the Garden River Reserve, as proposed, and the tract surrendered by them on the Thessalon River having been surveyed as stated in my Report of last year, and the lands brought into market—petitioned the Government to be allowed to re-occupy a portion of their former Reserve; and His Excellency was pleased, by Order in Council of the 8th October last, to direct that they should be allowed to re-occupy 2,327 acres of the same.

Dr. Tye, of Thamesville, was appointed medical attendant to the Moravians of the Thames, at a salary of \$150 per annum, payable from the funds of the Band; and Dr. Sinclair, of Longwood, was appointed medical attendant to the Chippewas and the Munceys of the Thames, at a salary of \$200 per annum, payable from the funds of those Bands.

On the 19th of May, 1878, the Mississaguas of Scugog surrendered 400 acres of their Reserve, consisting of lots 6 and 7 in the 11th Concession of Scugog, to be leased for their benefit. The land in question had been for a length of time previously leased in several small parcels in an irregular and illegal manner to White people, by the individual Indian claimants; and the object of the surrender was, that the Department might lease the same on the most advantageous terms, and the rents received might be paid to the individual Indians to whom the land had been allotted. A subdivision survey of the lands has been ordered to be made, in order to prevent difficulties and contentions between the lessees. The lowest rate obtainable for the cleared portion of the land is \$3 per acre.

A change was made in the Western Superintendency of this Province, by the resignation of Mr. Robert McKenzie, the former Superintendent, and the appointment of Mr. Ebenezer Watson to that position, Mr. Watson's salary being placed at \$1,300 per annum, with \$100 per annum for travelling expenses.

QUEBEC.

Instructions were sent from this office in October, to the Department of Crown Lands of Quebec, to have the boundaries of the Reserve at LaTuke, on the St. Maurice, which consists of five miles square, surveyed.

This Reserve was directed, by Order in Council of the 8th June, 1854, to be made for the Algonquins and Tetes de Boule Indians who frequent the shore of the St. Maurice and its tributaries, and for the Abenakis of Becancour and St. Francois du Lac, who reside respectively in the Counties of Nicolet and Yamaska.

It was one of the Reserves instituted by said Order in Council for the Indians of Lower Canada, under authority of the Act 14 and 15 Vic., Cap. 106, but no instructions were given until recently for a survey of the boundaries of the Reserve in question.

Owing to the distance at which Dr. H. A. Martin, Medical Attendant to the Micmacs of Restigouche resided from their Reserve, His Excellency was pleased, by Order in Council of the 6th June, 1878, to dispense with Dr. Martin's services, and to appoint Dr. Vennor of Campbelltown, on the opposite side of the Restigouche River his successor, at the same salary, namely, \$100 per annum.

In view of the low price of furs, scarcity of game, difficulty on the part of the Indians to conform to the new mode of fishing under the existing laws, and from other causes, the Department found it necessary to furnish more relief than usual to the Indians of the Lower St. Lawrence and elsewhere in the Province of Quebec this Fall.

And inasmuch as the fund at the disposal of the Department, for relief purposes in the Province of Quebec, was insufficient to admit of any augmentation to the usual grants, His Excellency was pleased, by Order in Council of the 21st November last, to sanction additional relief to the extent of \$2,000, being contributed, under a special warrant of His Excellency, in anticipation of the Supplementary Estimates for 1878-9, to be submitted to Parliament at its next Session.

Additional relief has accordingly been extended to the Indians at points where it was most needed.

A number of the Indians at Caughnawaga have applied for enfranchisement. It is desirable to afford every facility to Indians to enable them to take advantage of the clauses of the Indian Act which provide for their enfranchisement under certain conditions; and as a necessary preliminary in the case in point, the Reserve must be surveyed, and a fair proportion of land allotted to each individual applicant, who may be considered by the Band worth of enfranchisement, the Act requiring as a first step towards the carrying out of its provisions, that the Band shall allot a fair proportion of land within the Reserve to each applicant; said allotment to be approved by the Superintendent-General of Indian Affairs.

It having become necessary, in consequence of changes made in the proprietorship of many of the lots leased to the White people within the Seigniorship of Sault Ste. Louis, which belongs to the Iroquois of Caughnawaga, to rectify the various holdings as shewn on the cadastre of that Seigniorship, instructions were given in September last to the Agent to have this service done. No report however respecting the work has as yet been received.

Small-pox having made its appearance at Caughnawaga and at the Lake of Two Mountains early in the season, the spread of that loathsome disease was promptly checked by the general vaccination of the Indians at each of those places.

NOVA SCOTIA.

The two Reserves in the County of Cape Breton, near Sydney, containing respectively 24 and 536 acres of land, and which are referred to in my report of last year, were surveyed during the past season, and steps have been taken to have the same regularly transferred by the Provincial to the Dominion Government for the use of the Indians.

It was considered advisable, in the interests of the Indians of this Province, to subdivide the former Agencies, each of which included several counties, into smaller districts, with a view to closer supervision being exercised over the Indians in each county.

The following appointments to Agencies were accordingly made by Order in Council of the 23rd May last:—Mr. G. E. Beckwith, of Cornwallis, was appointed Agent for Kings County, at a salary of \$25.00 per annum; the Rev. Thomas Butler of Caledonia, for Queens County, at \$37.50 per annum; the Rev. E. I. McCarthy, of Chester, for Lunenburg County, at \$37.50 per annum; the Rev. D. O'Connor, of Bedford, for Halifax County, at \$33.33 per annum; Dr. McLean of Shubenacadie, for Hants and Colchester Counties, at \$33.33 per annum; Dr. A. F. Clarke of Parsboro, for Cumberland County, at \$33.33 per annum; Rev. Mr. McKenzie, of Christmas Islands, for Cape Breton County, at \$100 per annum; Rev. Donald McIsaac, of River Inhabitants, for the County of Inverness, at \$50 per annum; Rev. A. F. McGillivray, of Grand Narrows, for Victoria County, at a salary of \$50 per annum.

NEW BRUNSWICK.

The timber which I stated in my Report of last year it was proposed to sell on certain Reserves in this Province, was brought into the market and sold fairly, considering the state of the timber trade.

The distance of the Reserves on the Tobique River, in the County of Victoria, and at the confluence of the Rivers Iroquois and St. John, in the County of

Madawaska, from Fredericton, the place of residence of the Indian Superintendent for these and other Reserves on the same side of the Province, being found a serious impediment to the proper administration of the business connected with these Reserves, a local agent was appointed by Order in Council of the 23rd December, 1878, at a salary of \$100 per annum, to reside near the Tobique Reserve, and to supervise the affairs of the Bands on both Reserves; the salary of the Superintendent at Fredericton being proportionately reduced.

PRINCE EDWARD ISLAND.

A new road was opened upon the Reserve on Lennox Island.

A number of good lots of land front on this road, and offer opportunities to the young men of the Band who have not already taken up land for farming purposes to do so, with the advantage of road accommodation in connection with their farms.

It was considered advisable, in view of the distance at which the late Indian Superintendent, Mr. T. Stewart, of Charlottetown, resided from Lennox Island, which is the principal Reserve in that Province, and in view of that gentleman's advanced age, to relieve him of the duties devolving upon him as Superintendent, and to appoint a resident Superintendent on Lennox Island, who should also perform the duties of school teacher to the Indian children and instructor in farming to the Indians.

Mr. John O. Arsenault, of Egmont Bay, was accordingly appointed, by Order in Council of the 2nd July, 1878, at a salary of \$500 per annum, being the amount of the combined emoluments enjoyed by the former Superintendent and the late school teacher.

Mr. Stewart's services, while acting as Indian Superintendent for Prince Edward Island, deserve to be mentioned in terms of commendation. He always proved himself the friend of the Red man, and by his untiring care for them he contributed greatly towards their welfare, and discharged the duties entrusted to him with zeal.

MANITOBA AND NORTH-WEST TERRITORIES.

By Order in Council of the 17th June, 1878, Mr. William Palmer Clarke was provisionally appointed Indian Agent for Treaty No. 5, and stationed at Norway House.

Mr. Clark was not however confirmed in the appointment, Mr. Angus McKay having been appointed to the position by Order in Council of the 7th October, 1878.

Mr. Lawrence W. Herchmer was appointed by Order in Council of the 5th October last, Indian Agent and Instructor, in farming to the Sioux Indians settled on the two Reserves allotted to them on the Assiniboine; and subsequently by Order in Council of the 5th November, 1878, the Sioux, to whom a Reserve at Oak Lake, in the vicinity of the Turtle Mountains was assigned, were included in Mr. Herchmer's Agency, and his salary was consequently increased from \$600 to \$1,000 per annum.

By Order in Council of the 20th October, 1878, Mr. Ebenezer McColl, who had been provisionally appointed Inspector of Indian Agencies in the Manitoba Superintendency, was confirmed in that position, at a salary of \$1,800, with travelling expenses.

By Order in Council of the 17th October, 1878, Dr. Hagarty, Medical Superintendent to the Indians within the North-West Superintendency, was appointed also Medical Superintendent to the Indians within the Manitoba Superintendency, with an addition to his salary of \$400 per annum, thus making the total emolument of his office \$1,800 per annum, with travelling expenses.

Dr. Hagarty was directed to reside, until further orders, at Winnipeg, and to perform the operation of vaccinating all the Indians within the Manitoba Superintendency who have not already been vaccinated. Vaccine matter was recently sent to him for that purpose.

Mr. Agent Young, of North St. Peter's, reports that the crops on that Reserve have turned out well; that the Indians on the Broken Head River Reserve have signified an intention to settle on their farms and cultivate the same.

They at present make their living chiefly by hunting and fishing.

The Indians on the Fort Alexander Reserve, Dr. Young reports, are rapidly settling, building comfortable houses, and turning their attention to farming.

The Indians procure the greater portion of their subsistence for the winter from fall fishing in Lake Winnipeg.

The Indians of Black River Reserve have all settled upon parcels of land therein and are cultivating the same satisfactorily. These Indians lay in their stock of fish for the winter in the Fall of the year. The health of the Indians within Dr. Young's Agency has, he states, been generally good during the past year.

The Agent for the Indians interested in Treaty No. 2 reports, that the condition of the several bands within the territory covered by that Treaty is satisfactory.

Mr. Pither, the Agent at Fort Francis to the several Bands interested in Treaty No. 3, whose Reserves are situated in the vicinity and to the north of Rainy Lake, reports that those Indians have had fair returns from the hunt, and that rabbits being numerous and wild rice plentiful in that country, the Indians have not suffered from want of food, and the general health of the several Bands has been good.

I regret however to state that the Agent reports that very little land has been broken up by these Indians, although they have received cattle and ploughs, and the land on of the five reserves is cleared ready for tillage.

The Agent to the Indians of the easterly portion of the territory covered by Treaty No. 3, reports that these Indians are anxious to have schools among them, and a person to teach them to farm and build houses.

The payment of the annuities to the Indians within the North-West Indian Superintendency were, I am happy to say, made at the dates previously fixed upon at the several points of meeting, and the supplies of food, implements and cattle were delivered for the most part on time.

I regret to report, however, that complaints have been made of the bad quality of the flour and beef furnished at some of the points of payment, and also that the cattle purchased for these Indians were too wild to be handled.

The arrangements made and carried out by Col. McLeod and the other officers of the North-West Mounted Police, in connection with the payments of annuities, and the furnishing of implements and cattle to the Indians interested in Treaty No. 7, were, I am happy to say, most satisfactory, as will be seen on referring to an extract from Lieutenant-Colonel McLeod's report (placed herewith.)

The Assiniboine Indians of Cypress Hills, who reside near that locality, within the territory covered by Treaty No. 4, and some of the Cree and Saulteaux, who hunt to the south of Fort Walsh, were paid at that post by Inspector Walsh, of the North-West Mounted Police Force.

The other Bands interested in that Treaty were paid as usual by Mr. Agent McDonald at the points most convenient for them.

The Indians of Treaty No. 6 were paid by Mr. Agent Dickieson, and by the officers of the North-West Mounted Police.

An extract from a despatch of the 11th November last, received from His Honor Lieutenant Governor Laird, who is also Indian Superintendent, at Battleford, replying to certain questions asked of him with regard to the condition of the different Tribes and Bands within the North-West Superintendency, and making valuable suggestions in relation to the management of Indian affairs in the North-West, will also be found herewith. It may be remarked in connection with His Honor's suggestion, that the Indians should be furnished with food while engaged in sowing their lands in the spring, that this had already been acted upon in a measure; and the proposition to employ instructors in farming, to teach the Indians, is receiving consideration at your hands.

The Agent to the Indians interested in Treaty No. 4 reports that of the 24 Bands within the territory covered by that treaty, 11 are gradually turning their attention

to farming; one of these bands, that of Chief Coté at Fort Pelly, raised during the past year 280 bushels of barley, and over, 3,000 bushels of potatoes, and a large quantity of other vegetables, all of excellent quality.

The increase from four cows which were given to this Chief two years ago has been large, namely, eleven head.

Several of the other Bands interested in Treaty No. 4 are reported to have also made considerable advancement in their farming operations.

His Honor Lieutenant Governor and Indian Superintendent Laird reports that of the number of Indians paid in Treaty No. 6 this year, 1,636 received payment for the first time, and being entitled to their gratuity of \$12 each, besides one year's annuity of \$5 or \$17 in all per head, a much larger sum was expended in the payment of annuities to the Indians within the territory covered by this treaty than was anticipated.

The Indians interested in this treaty received this year farming implements for the first time. A distribution thereof having been made to the different Bands at the dates they were paid their annuities.

Out of the Bands within this treaty, to whom seed grain was given, Mr. Laird reports that he has reason to believe seven made good use of the seed. Most of the Band, however, he fears did not devote all the seed to the purpose for which it was intended.

The Lieutenant Governor also expresses his belief, that were it possible to employ men to instruct and assist the Indians at seed time, most of the Bands of the Saskatchewan would soon be able to raise sufficient crops to meet their most pressing wants.

BRITISH COLUMBIA.

By Order in Council of the 8th March, 1871, the Board of Indian Reserve Commissioners, which was constituted in the year 1876, for the settlement of the Indian Land difficulty in this Province, was reconstructed in compliance with a strongly expressed desire on the part of the Government of British Columbia, that the commission should be organized upon a more economical basis.

The Dominion Government, while acknowledging the great judgment, tact, firmness, and patience, displayed by the late Board in the many complicated questions upon which it was obliged to adjudicate, and which may be stated to have given satisfaction to all parties interested, felt constrained, in the interests of economy, to accede to the representations of the Local Government. This was done in what appears to have been the most judicious manner possible under the circumstances.

The Board of Commissioners, which before had consisted of three, namely: Mr. A. C. Anderson, Commissioner on behalf of the Dominion Government, Mr. A. McKinlay, Commissioner on behalf of the Province, and Mr. G. M. Sproat, Joint Commissioner, was dissolved, and it being considered judicious, in view of the discontent it would probably occasion among the Indians, were an entire change in the *personnel* of the Commission to be made, the last named gentlemen was appointed sole Commissioner, his decision to be subject to the approval of the Commissioner of Lands and Works in British Columbia. And in the event of differences between Mr Sproat and the Commissioner of Lands and Works on any question it is to be referred to one of the judges of the Supreme Court.

In this way the continuity of the Commission, as formerly constituted, is in a measure preserved, and the Indians have a guarantee that the same policy which had previously guided the Commission in dealing with the Reserve question will still prevail.

The expenses of the Commission as now constituted are paid by the Dominion Government; but in case of its being necessary for a referee to visit any place, for the purpose of deciding any point of difference between the Indian Reserve Commissioner and the Commissioner of Lands and Works, each Government is to pay one half of the Referee's expenses.

Mr. Sproat, in his report of the work of the Commission during the past year, states that up to the date of that report (26th October), in all the districts visited by him, the Indians appeared to appreciate the just policy and kind intentions of the two Governments, and did not ask any questions respecting the reduction in the number of Commissioners.

Mr. Sproat further states, that dealing with one white chief is more in accordance with the ideas of the Indians, than dealing with three white chiefs, whose respective duties and positions on the Commission the Indians did not quite understand.

While doing justice to the Indians in the matter of the lands assigned to them, Mr. Sproat seems to have a proper sense of what is due to the White settlers in the adjustment of reserve lands for the former; and he reports that he cannot see that he has been otherwise than well received by the White settlers in the different districts visited; and he thinks that he may venture to say, that the large majority of settlers with whom he has had to deal, recognize that he has done his best to avoid any needless interference with existing interests.

The work of the Commission, during the past year was along the Fraser River, from Yale to above Lytton, along the Thompson up to Hat Creek, and in the long valleys of the Rivers Nicola and Similkameen.

The work was commenced at the point where it was discontinued last year, being near Osoyoos, on the United States Frontier.

The Indian land question has thus been adjusted (with the exception of a few open questions) throughout the whole southern interior of the mainland of the Province, for about 200 miles back from the frontier.

The average quantity of land assigned last year to the Shuswaps and Okanagan Indians, was 18½ acres of arable land to each adult, and 22 acres of grazing land for each horse or head of cattle.

Mr. Sproat, in an earlier report, strongly advocates the non-interference by Government with any of the fishing rights or habits of the Indians. He says that the Indian Reserve question and the buffalo question are trifles compared with the fishery question to the Indians in British Columbia.

The whole Indian population of between 30,000 and 40,000 are fish eaters. It is their staple article of food. The Indians, especially in the interior, subsist on the salmon.

In the instructions given by both Governments to the Commissioners, great stress was laid upon the necessity of not disturbing the Indians in their possessions *inter alia* of fishing stations, and on the impolicy of attempting to make any violent or sudden change in the habits of the Indians engaged, among other pursuits, in fishing.

The attention of the Department charged with the management of Fisheries has been called to this subject, and several communications have been exchanged between this Department and the Department of Marine and Fisheries relative thereto.

In the early part of the season two surveying parties were employed to survey, under the instructions of Mr. E. Mohun, C.E., the boundaries of the Reserves allotted by the Commissioners in 1877. The work on the mainland was entrusted to Captain Jemmett, P.L.S., of New Westminster, and that on the coast to Mr. A. Green, P.L.S., of Victoria.

The field work was still in progress when the latest advices were received; but it has probably by this time terminated for the winter season.

Mr. Sproat having reported that the services of Mr. Mohun, as attending Surveyor on the Reserve commission, might, in his opinion, be dispensed with and made available during the winter season, in plotting the field notes of the two Surveyors engaged in running the boundary lines of the Reserves, and next season in assuming personal charge of the field work of one of the surveying parties, as well as superintending the work of the other party, this arrangement was concurred in and instructions were sent to Mr. Mohun.

Mr. Sproat's dispensing with the services of the attending surveyor, and employing a non-professional, and consequently a cheaper man, to examine the lands to be

set apart as Reserves (and which arrangement Mr. Sproat states will work satisfactorily, in view of the fact that his experience will enable him to give sufficiently accurate instructions to the person employed for all practical purposes) effects a saving of about \$6 per diem or \$180 per month in the expenses of the Commission. On the other hand, Mr. Mohun's knowledge of the locations already assigned by the Commissioner for Reserve purposes, eminently fit him both for conducting the field work, which it is proposed to entrust to him in the spring, and for directing the work of the other surveying party.

So soon as the work of allotting Reserves and surveying the boundaries of the same is completed, and the Reserves are regularly transferred to the Dominion by the Provincial Government, an entire change in the administration of Indian Affairs in British Columbia should be inaugurated, as the present system is defective, and will be quite unsuited to the new and varied responsibilities which the transfer of the Reserves will entail upon the Department. This change of management need not involve much (if any) more expense than the present system does, and should, if the organization is judicious, be much more effective and give better value for the money expended.

I am of opinion that the principal administrative officer in the Indian Service of this Province should be a Visiting Superintendent or Inspector, and that he should be constantly on the move. Under this officer there should be sub-agents, each of whom should be stationed at the most central point to the Reserves and Bands for which he acts, and should be subject to the direction of the Visiting Superintendent or Inspector.

The headquarters of the Inspecting Officer should be at such central point as will be most convenient for the Indians and sub-agents, and where he can be readily communicated with by post and telegraph from this office.

In view of the dissatisfaction which exists among many of the coast tribes, on account of alleged encroachments by White people on their fishing rights, and of the illicit manufacturing and immoderate use of spirituous liquors by some of the Indians of Queen Charlotte's Islands, where it is stated liquor is both manufactured and smuggled in large quantities from Washington Territory in the United States, and in view of the consequent insecurity of life and property in that locality, it would appear highly desirable that a steamer having Government officers on it connected with this Department and the Departments of Marine and Fisheries, Inland Revenue and the Customs, should visit that locality, and the other places on the coast where it is suspected liquor is manufactured or smuggled, and where there is dissatisfaction among the Indians relative to encroachments on their fisheries. Enquiry should be made by the officers into the several causes of complaint in which their Department are respectively interested, and effective measures should be adopted to remove the same.

The system of giving presents to the Indians of British Columbia was this year, very greatly curtailed. The expenditure in the Fraser Superintendency in the purchase of implements, tools, harness, seed, &c., for the Indians had been previously very heavy: and the policy of thus teaching Indians who had before been able to subsist by their own efforts, and who were entirely self-supporting, to become dependent upon the Government for the supply of articles which they evidently either did without in former times, or purchased for themselves, was, to say the least, very questionable. No such presents are now given, unless the sanction of the Superintendent-General has been previously obtained, and the expenditure in both the Victoria and the Fraser Superintendencies is now limited to what is absolutely unavoidable.

Cases of distress meet with prompt aid, and medicines and medical attendance are supplied to the sick when required.

GENERAL BUSINESS.

The following is a statement of the work done at this office, not including, however, the numerous reports and memoranda prepared (whereof no record has been

kept) or copies made of documents, searches for records, translations from French into English, and *vice versa*, &c., &c.

Letters received, docketed and registered.....	4,627
Memoranda, containing instructions for letters to be drafted..	3,856
Letters drafted, transcribed, entered, docketed and registered, covering 5,043 pages.....	3,856
Accounts kept and balanced quarterly.....	170
Pay-checks issued	3,100
Number of new land sales entered.....	957
Payments on leases checked and entered.....	420
Payments account sales checked and entered.....	1,558
Agents' returns examined and docketed.....	162
Assignment of land examined and registered under 39 Vic., cap. 18, sec. 32, certified and entered in sales books.....	186
Descriptions for patents prepared in duplicate, examined, entered and issued.....	172
Patents examined, entered and mailed.....	172
Cancellations of sales of land prepared and entered.....	25
Certificates for Heir and Devisee Commission.....	1

MONEYS.

The gross amount of principal at the credit of the sundry Trust Funds administered by this Branch in the interest of the various Bands of Indians owing the same, was on the 30th June, 1878, \$2,943,533.54, being an increase of \$24,165.47 over the amount standing at the credit of the capital account of the Trust Funds on the 30th June, 1877; and the amount of interest which had accrued on the 30th June last was \$160,568.69, being an increase of \$1,502.37 over the accrued interest for 1876-77.

Statement B and the subsidiary statements thereto, which, accompany this Report, contain full details of the revenue and expenditure in connection with each of the Trust accounts.

Complete information relative to the expenditure of the several Parliamentary appropriations for Indian purposes will be found on reference to statements C 1, 2, 3, 4, 5, also placed herewith.

LAND SALES AND LEASES.

The quantity of land in Ontario sold for the benefit of the Indians during the year ended the 30th June, 1878, was 73,363 $\frac{37}{100}$ acres, being 29,550.36 acres over the quantity of land sold last year. The amount for which the lands were sold was \$54,555.11.

The amount collected on account of old and new sales and leases was \$68,077.93.

The area of surrendered and surveyed land in the Provinces of Ontario and Quebec still unsold is 480,171 $\frac{3}{100}$ acres.

Return D prepared by the Clerk in charge of land sales, and which is attached hereto, gives the area of the lands sold in each Township during the year as well as the quantity still disposable.

CONCLUDING REMARKS.

The usual statistical statements showing the population of the Indian Tribes and Bands, the condition of the various schools conducted in the interests of the Indians, and the agricultural and industrial resources of the Indians of the different Provinces are placed herewith. The reports received from the Indian Superintendents and Agents also accompany this report. I regret, however, to be again obliged to

notice the absence of reports from several Agents, although the Department repeatedly called upon them for the same.

In conclusion, I have much pleasure in testifying to the general efficiency and zeal displayed by the officers of this Branch in the discharge of their duties.

I have the honor to be, Sir,

Your obedient servant,

L VANKOUGHNET,

Deputy Superintendent-General of Indian Affairs.

No. 1.

ONTARIO,

GRAND RIVER SUPERINTENDENCY,

20th September, 1878.

The Honorable

The Superintendent General of Indian Affairs,

Ottawa.

SIR,—I have the honor to transmit the accompanying tabular statements, for the year ending 30th June last, but which, from unavoidable cause, is defective in those of implements, crops, and other industries ; but judging from personal observation and inquiries, they would not vary much with those of the year previous.

The results of the harvest, were on the whole, an increase, and of better qualities, arising no doubt, from the distribution of seed under your authority.

In horses, cattle, and other stock, as also farming implements, an improvement is perceptible.

Some more land in " Commons " has been brought into cultivation, with consequent fencing.

The public health has been good, no epidemic. Ague fevers prevail, arising from stagnant swamps and creeks, but a probable remedy appears in the removal of quantities of drift and dead wood from the principal creeks, and so allow the waters to run freely, draining the smaller creeks, and with ditching, stagnant pools ; to all of which, the Indian Council and people are sensible, and will take the necessary action.

Temperance Societies are active in their organisation, but a few evil disposed Indians defy the law, by taking liquor on the Reserve, cause trouble, prosecutions, and punishment.

The census show a continued natural increase.

The Six Nations number.....	3,152
Births.....	132
Deaths.....	111
Increase.....	21
The Mississaguas, number.....	211
Births	8
Deaths	7
Increase.....	1
Population of the Reserve.....	3,363

One hundred and forty Licenses have been issued to Indians only, for the removal, and sale of firewood, and for some logs for building purposes, such licenses being granted upon recommendation of committees of the Council.

As it has become necessary to preserve the woods for the wants of the Indian people, and succeeding generations, it is in contemplation to prohibit the removal of wood from the Reserve, while, it may be observed, traffic in wood has a tendency to withdraw attention from farming and other industries.

Roads and bridges are cared for, money expended, and the statute labour is well, and zealously applied, indeed, the Indians rival and excel their white neighbours in that respect.

The Agricultural Society, and ploughing matches of the Six Nations, continue to prosper and flourish; the show last fall, being most excellent, and the ploughing matches, with useful prizes attract numerous competitors, and excite a lively interest.

It is gratifying to announce, and welcome the Acts of the Six Nations Council, to cooperate with the New England Company, (London, England) in voting their first annual grant of \$1,500 towards education, and the maintenance of schools in their Reserve. Upon the suggestion of that Company, a new Board of Education for the Reserve, has been formed, to which the Council have named three Indian representatives; your Visiting Superintendent being also a member of the board.

It is pleasing to again allude to the admirable Mohawk Institute, supported by the New England Company; about ninety children are there; its doors being open to, and availed of, by children from Indian Bands throughout Ontario and Quebec.

Upon the request of the Council of the Six Nations, and under your instructions, an arduous work was undertaken, and carried into effect, in an audit of claims,—extending over the period of 16 years—against the great majority of the Six Nations, the Council, in the most generous spirit, voting for the full payment of such claims, which you caused to be done.

It is imperative, however, that some course be adopted, to prevent a recurrence of the injurious credits indulged in, and the Council appear anxious to secure that end.

The Six Nations evince their high sense of the constant good faith of the Crown, by showing their loyalty upon all fitting occasions, and each anniversary of Her Majesty's Birth Day, is duly celebrated with a programme of proceedings pleasing to witness.

The Superintendent, by their request, presides on all such occasions.

On the last 24th May, a loyal farewell address was adopted, to Her Majesty's representative, the Governor General, who with the Countess of Dufferin, so kindly visited the Reserve and the Council House, in August 1874, an historical event, remembered by the Six Nations.

This report, with those of the four previous years, convey very full information, respecting the largest body of civilized Indians in the Dominion of Canada.

I have the honor to be, Sir,

Your most obedient servant,

J. T. GILKISON,

Visiting Superintendent and Commissioner.

No. 2.

ONTARIO.

WESTERN SUPERINTENDENCY.

INDIAN OFFICE,

SARNIA, December 12, 1878.

The Honorable

The Superintendent General of Indian Affairs,
Ottawa.

SIR,—I have the honor to transmit, herewith tabular statement shewing census, progress in agriculture &c., of the several Tribes of Indians within this Superintendency. I have taken a good deal of pains, and been at very considerable expense, to have it as nearly correct as possible; yet in several cases I had to make an approximation to the best of my judgment.

CHIPPEWAS OF SARNIA AND KETTLE POINT

The larger number of these Indians are settled along the River St. Clair, immediately south of the town of Sarnia; the remainder are at Kettle Point and Stoney Point on Lake Huron. The soil of the Sarnia Reserve is good, and a considerable portion of it is beautifully situated. A part of it, however, is very low land, and requires a good deal of drainage to make it fit for cultivation. Nearly all the timber on this Reserve that was of any value has been removed; so that, in many places, there is not sufficient timber left to fence the land. The two reserves on Lake Huron, Kettle Point, and Stoney Point, embracing between them probably between 4,000 and 5,000 acres, contain some of the very choicest land; and there are a few farms tolerably well cultivated. A large portion of these Reserves, however, is of very little value, being composed alternately of mounds of pure sand and deep swamps.

The condition of the Indians is very much better than it was thirty or forty years ago, yet the greater number are very poor, and always anticipate their annuities by obtaining credit, often to more than they amount to. In spite of the stringent provisions of the law, there is still a good deal of drinking among them, which, of course, adds to their poverty and debasement.

CHIPPEWAS OF WALPOLE ISLAND.

These Indians occupy the larger portion of Walpole Island. Many of the farms are pretty well cultivated, and a large quantity of the different varieties of farm produce was raised during the past season. The Island is very fertile, and if thoroughly tilled would support a large population. The Chippewas on the Island number about 612, and, on the whole, are industrious and well behaved. They have an annual Exhibition of animals and agricultural produce, at which prizes are offered in the usual manner. This was established a few years ago by the Revd. A. Jamieson (the Church of England Missionary on the Island), and by leading to competition among themselves, has produced good results. On this part of the Island there is a good chapel (Church of England) in which service is held regularly by the veteran Missionary Mr. Jamieson, who preaches to the Indians in their own language.

There is also a school house, in which a school is maintained throughout the year, though I am sorry to say that the attendance, especially for the last quarter, has been very small. The larger portion of the salary of the teacher of this school is paid by the Church Mission.

POTTOWATTOMIES OF WALPOLE ISLAND.

These Indians number about 157. They occupy a fine portion of the Island, and a number of them have their farms in a tolerable state of cultivation. Their crops the past season were very good. They have a school supported by the Methodist Society, which is well attended, and apparently efficiently taught by an Indian Teacher. They are much in want of a new school house, and have one now in course of erection. They have also a resident Methodist Missionary among them.

MORAVIANS OF THE THAMES.

These Indians number about 275. Their Reserve comprises upwards of 3,000 acres beautifully situated south of the River Thames, in the Township of Orford. The land, for the most part, is of good quality, some of it is particularly so. It is divided, for the most part, into 40 acre lots. These in some cases are very fairly cultivated. In many cases, however, these lots remain in their natural condition or nearly so. A very considerable quantity of farm produce was raised on this Reserve during the past season. Many of these Indians are deeply involved in debt; though with moderate care and industry, they might, in a very short time, be in very comfortable circumstances. A Mission of the *Moravian Brethren* has been established here for upwards of 100 years. In connection with this Mission, there is a very efficient school. There is also a very good school supported from the Indian funds. These two schools, I think, are the best within this superintendency.

WYANDOTTS OF ANDERDON.

These number only 73 souls. They occupy a splendid Reserve situated on the Detroit River. They have large farms, and some of them are pretty fairly cultivated. They are in better circumstances than any of the Tribes in this superintendency. They have applied for enfranchisement, and about one-half of the time of their probation has already expired.

I have the honor to be, Sir,

Your obedient servant,

EBENEZER WATSON,

Indian Superintendent.

No. 3.

ONTARIO.

WESTERN SUPERINTENDENCY,—2nd DIVISION,

INDIAN AGENCY,

STRATHROY, September 27, 1878.

The Honorable

The Superintendent General of Indian Affairs,

Ottawa.

SIR,—I beg to submit the following Annual Report, on Indian Affairs within my Agency, for the year ending 30th June 1878, in accordance with instructions received in your circular of the 14th August last.

ONEIDAS OF THE THAMES.

This Band numbers 590, an increase of 5 since last Census. They have built a very good frame school house, and partly finished a second house during the last Spring and Summer, are a very quiet and industrious band of Indians.

MUNSEES OF THE THAMES.

This Band numbers 129, a decrease of 2 since last census. Their condition otherwise has changed so little since my last report, that I have no new information to offer of any service to the Department.

CHIPPEWAS OF THE THAMES.

This Band numbers 455 an increase of 9 since last Census. They have during the year for the most part been orderly and well conducted, have three good schools on the Reserve taught by native teachers, who give general satisfaction.

The majority of the three bands, are sober and industrious, and enjoy the comforts of civilized life.

The moral status with few exceptions is decidedly good.

I have the honor to be, Sir,

Your most obedient servant,

THOMAS GORDON,

Indian Agent.

— — —
No. 4.

ONTARIO,

CENTRAL SUPERINTENDENCY.

TORONTO, 10th October, 1878.

The Honorable

The Superintendent General of Indian Affairs,

Ottawa.

SIR,—In accordance with instructions contained in your circular of the 14th August last, I have the honor to submit the following report, on the condition of the Indians in this superintendency, together with a tabular statement showing progress in agriculture &c., for the year ended on the 30th June last.

I am much pleased to be able to report a general healthy condition of the Indians in this superintendency, the natural increase for the past year being eighty-six, which is greater than for many years previously. This no doubt is in a great measure due to the extreme mildness of the past winter.

The number of Indians as shown on the last census is 2,808, who received during the year as annuities, pensions, salaries, and for other purposes, about \$48,500.00. There are also upwards of 300 Indians in this division who have no fund and do not participate in these payments, making a total of over 3,100 people.

I find great difficulty in obtaining any thing like satisfactory information of the quantity of land under cultivation, and the produce therefrom, arising in some cases from carelessness and in others from inability to give the desired information. The returns show a considerable increase in the amount of produce raised, over that of previous years. I am quite satisfied that the Indians in this superintendency are generally improving in habits of industry and more especially as regards farming, the great drawback to further progress is the want of suitable agricultural implements, and if any means could be adopted to supply this want it would materially improve their condition.

As regards educational matters, I can only repeat what I have heretofore stated, that the Indians do not place sufficient value on the education of their children, they exercise no control over them and apparently take no interest in sending them to school regularly.

If compulsory education should be adopted with any class, it certainly should be with Indians, but one of the greatest drawbacks, however, to the education of Indian children is the want of proper teachers, the great majority of the teachers employed are totally unqualified for the position, and the only remedy for this evil is to pay higher salaries and demand a higher state of proficiency, and in all cases the appointment of teachers should be in the hands of the Department.

As regards intemperance I am pleased to say that there is a gradual but decided improvement.

I have the honor to be, Sir,

Your obedient servant,

WM. PLUMMER,

Superintendent and Commissioner of Indian Affairs.

No. 5.

ONTARIO,

NORTHERN SUPERINTENDENCY, —DIVISION No. 1.

INDIAN OFFICE, MANITOWANING, October 14, 1878.

The Honorable

The Superintendent General of Indian Affairs,

Ottawa.

SIR,—I have the honor to transmit my report on Indian Affairs within this superintendency for the year ended 30th June last, with tabular statement.

There is no material change to report in the condition of the Indians,—the past year has been one of abundance,—the crops having been above the average, and as the open fall season allowed of fishing operations being carried on much later than usual, the Indians generally had an ample supply of food for winter use, and many had a considerable surplus to dispose of last spring.

A gradual increase in grain and root crops raised by many of the bands may be noted, also a slight addition to the number of agricultural implements such as ploughs, &c., but the principal part of the cultivation continues to be done with the hoe as heretofore.

The immunity hitherto enjoyed by the Indians from the ravages of the potato bug will, I fear, soon come to an end, the much dreaded visitant having made its appearance at several points upon this island and also upon the north shore, and it is feared that next season it will become general, in which case, should the Indians follow their usual custom of leaving their crops to take care of themselves, while they employ themselves picking berries, the total destruction of their potato crops may be apprehended.

Increased attention is being devoted to stock raising by some of the Indians, many of whom are fairly successful; the almost unlimited stretch of excellent pasture they possess affords great facilities for this branch of enterprise which seems likely to become more general amongst them. It is hoped that some bands will ere long be in a position to establish Agricultural Exhibitions which will not only stimulate them to raise a better class of stock, but also to adopt improved methods of husbandry.

In education there is not much progress to note:—With the exception of the schools of Wikwemikong and Sheguiandah the teachers with few exceptions are generally not equal to the duties they have undertaken. At present great difficulty is experienced in obtaining properly qualified teachers, the salary paid being very low. I have remarked with pleasure that both at Wikwemikong and Sheguiandah much greater efforts are being now made to instruct the children in the English language than heretofore.

The Indians occupying the unceded part of this Island have greatly improved the highways on their Reserve, a very creditable road, one chain in width and ditched has been made from Manitowaning Bay to Wikweminkong, and improvements in the roads in other directions have also been made, and more are contemplated.

The ill-feeling which has for sometime existed between the two parties of Indians occupying the unceded part of this island has been greatly lessened, and will I trust shortly be entirely removed. At the request of both parties, I have made application to the Department that a day may be appointed for the elections of additional chiefs, under section sixty-two of the Indian Act 1876, after which I trust unanimity will be again restored to their councils.

The health of the various Bands has been generally good, but few serious cases of illness having occurred amongst them.

The general conduct of the Indian has been good, but few cases of transgressing the law having taken a place when the large number of Indians in this superintendency is considered;—one case of loss of life by indulgence in intoxicating liquor occurred near Little Current, two persons who supplied liquor to Indians were fined, and one sent to jail, an Indian for keeping a house for the sale of liquor on an Indian Reserve was sent to jail for two months and two Indians for stealing liquor were sent to jail for three months. I regret to say that the impossibility of getting Indians to testify truthfully in liquor cases renders it exceedingly difficult to obtain convictions.

The settlement of this Island has made great progress and the demand for land has been in excess of any previous year, the new surveys being made will render available for settlement a large quantity of excellent land, and the proceeds will tend to augment the funds belonging to the Ojibeways and Ottawas of Manitoulin Island, some of whom have been dissatisfied at the small amount of their half yearly payment.

The total amount distributed during the year among the Indians of the superintendency has been \$8,375.16.

I have the honor to be, Sir,

Your obedient servant,

JAS. C. PHIPPS,

Visiting Superintendent.

No. 6.

PARRY SOUND, 1st August, 1878

The Honorable

The Superintendent General of Indian Affairs,

Ottawa.

SIR,—I have the honor, along with the tabular statement, to forward my report upon Indian affairs in this Superintendency.

Wishing to be able to speak from personal observation about the quantity of land under cultivation and the state of the crops, I devoted several days during my late visits to the different reserves to seeing as many of the gardens as I could find time for; but on some reserves the gardens are so far from each other that it was impossible to see a great many. As a rule the patches under cultivation are small, and few could well be called farms; but the crops upon them were generally good. In many cases, however, the potatoe beetle was doing much damage. Upon the whole, however, the Indians in this Superintendency do not go in much for farming, but depend more upon fishing and hunting.

I fear I cannot report any decided advance in their industrial habits. Yet some

of them see that they cannot now depend upon fishing and hunting but must take more to farming, and I trust that the schools which are in the way of being established will do something towards promoting this change.

In reference to the different bands, I would say that on Parry Island the crops are good; and besides corn and potatoes, a little wheat, oats and peas have been grown.

At Shawanaga much the same may be said about the crops. Heretofore their gardens were mostly beside each other at one place and the soil there was a poor one, but the ravages of the potato bug have led the band to clear patches in different places.

At present the Indian village at Shawanaga is situated on the Lake shore upon two lots lately granted them by the Crown Lands. The Band, however, inform me that they are now convinced that they can no longer trust to hunting and fishing, but must take more to farming, and therefore they are to build cottages at the different places they have selected, are to clear more land, and depend more upon their farms.

At Henry's Inlet the crops are good and of the same variety; but the Band still depends chiefly upon fishing and hunting, but every year they find these getting worse and so they too must take more to farming. In this respect the Forest Bailiff—Moses Meshegogan—sets them an example, as he is the most steady hard working Indian I know. He has about 10 acres now cleared, with good crops of various kinds, and has built himself a large good house. Upon this Reserve there is some good land, but not much of it compared to the extent of rock.

On the French River chief Mishacongai's Band does not inhabit their Reserve, but live upon Manitoulin Island. Upon this Reserve there is a good deal of good land and upon it live 3 families of the Henry's Inlet Band. They have good houses where they have lived for some years; have cleared some land and have good crops. One of them is also a trader in a small way.

On Doki's Reserve, also upon French River, no one now resides, and as far as I know the only land under cultivation upon it is a piece of about 5 acres cultivated by chief Doki's, but he lives in an excellent house he built some years ago, upon the Reserve of the Lake Nipissing Indians. He and his sons are largely engaged in trade, and some of his Band also trade in a small way.

On the Lake Nipissing Reserve I found the crops generally good. The chief Cochai has a large clearing at the east end of the Reserve, and I saw some good peas and fair wheat on his farm; but his other crops are not so good. About 6 miles from Cochai's farm 8 of the Band have a pretty large clearing, and I saw good crops of corn and potatoes upon it and some wheat and oats. Near the west boundary of the Reserve several families live near each other and have good crops of potatoes and corn and some wheat and oats. But this Band depends very much upon fishing and hunting.

As to the schools I am glad to say that a start has been made. On Parry Island I inspected the work of the Contractor the other day and found it satisfactory. According to the contract the school house will be finished by the 15th August, and will be a good substantial building and quite large enough for the number of children.

At Shawanaga about one half of the necessary quantity of logs has been cut and flatted, but the want of snow last winter prevented them being drawn to the site of the school which is at a considerable distance. They will, however, be drawn as soon as there is snow.

At Henry's Inlet about one half of the logs had been flatted and drawn to the school site, when I was at the Reserve, and I saw a large proportion of the remainder in the bush ready for drawing, and the distance there being short I expect that by this time they have been hauled. As to the two latter schools, by instructions from the Department I am to call for tenders as soon as I know that the logs are drawn.

Another school was proposed at Lake Nipissing, and when I was there I held a council with the Band on the subject. The Band admitted the advantage for their children to be educated, but at the same time pointed out that they are so scattered over the Reserve which has an area of 100 square miles and they are so often away hunting that it would be impossible to locate a school so that many of the children could attend, and consequently they declined going in for a school.

I found it impossible to get any reliable information as to the returns of the crops. Some of the Bands could give none, and in the others it was very much guess-work.

In the returns of live stock also I find it difficult to get at the exact numbers, but I believe my returns are very near the mark. In general the Indians cannot understand why the Department wishes for information about that—still they give information as far as they can. To this, however, Chief Dokis was an exception. He gave particulars in two instances and then declined giving further information. Some of the Band, principally sons of Dokis were present at the time, but it seems to me that Dokis himself is pretty much the Band. At all events all is managed by him and no one gainsays him.

As for the honesty of the Indians—that virtue still remains with them—but it is indeed rare to find an Indian who will go in for steady work. For a day or two for some definite purpose they will work hard, but they have yet to learn the value of time.

Inebriety no doubt prevails too much, although I confess I have seen but little of it. Still no doubt the Indians continue to get whiskey in one way or another at almost all the taverns, and I believe that most of those wandering traders have whiskey with them, but although I know all this I find it impossible to get such evidence as will lead to conviction, and unless that were certain, moving in the matter would only make it worse.

Upon the whole I cannot say that I see any material change in the habits of the Indians, but as the hunting and fishing fails they must take to farming, and as they take to that no doubt they will see that to do any good they must stick closer to work. By this time too next year I trust to be able to return a certain number of children as attending school, and I think that will be the first step towards permanent improvement. Old habits are too strong in the older Indians, but the young may be taught the value of time and steady work.

I have the honor to be, Sir,

Your obedient servant,

C. SKENE,

Visiting Superintendent.

Parry Sound.

No. 7.

ONTARIO.

NORTHERN SUPERINTENDENCY,—3RD DIVISION.

SAULT STE. MARIE, 18th September, 1878.

The Honorable

The Superintendent General of Indian Affairs,

Ottawa.

SIR,—I have the honor to forward you my report of the 3rd Northern Superintendency under my charge, as required by your circular.

I have pleasure in informing you that a considerably larger portion of land has been put under cultivation during the past year than heretofore, and crops generally were very good. This Spring the Indians have been sowing wheat and the prospect promises very well. Owing to the dryness of the season, the potatoe crop will fall short.

The health of the Indians during the past winter was better than for the two previous seasons. Several deaths have occurred, but these have been from old age and chronic complaints.

The roadway surrendered by the Indians, last fall, has been cut out and improved by the Victoria Mining Company. This gave a large amount of employment to those living on the Reserve, and proved a great boon to all. Should the above mine continue to be successful, there will be a plentiful supply of work for all who wish to engage in it.

I have further to inform you that the 1200 acre location surrendered by the Indians in November 1874 is now being opened up by an American Mining Company, with every prospect of being profitable. The expenditure of this Company is also a great advantage to the Bands residing on the Reserve.

There was but a small quantity of timber cut on the Reserve last winter, and most of this had to be left in the woods on account of the want of snow.

During the past year quite a number of settlers have taken up land in the Township of Laird. This Township has every probability of rapidly filling up. The great complaint against it is the want of roads. Settlers have also commenced taking land in the Township of Fenwick, and the saw mill erected at the mouth of Goulin's River will tend greatly to increase settlement in that Township. A road has been commenced through the Township of Pinnefather; this when completed will open up that Township, which from its close proximity to the Sault will no doubt be rapidly settled.

Taking all things into consideration, I consider the position of the Indians in my superintendency to be most decidedly improving.

I have the honour to be, Sir,

Your most obedient servant,

WM. VAN ABBOTT,

Indian Lands Agent.

No. 8.

PRINCE ARTHUR'S LANDING, 21st September, 1878.

The Honorable

The Superintendent General of Indian Affairs,

Ottawa, Ontario.

SIR.—I have the honor to transmit, Tabular Statement Indian return for the year 1878.

The four Bands under Treaty No. 3, are chiefly pagans, and, have not as yet been influenced by civilization to any great extent, they are anxious, however, to have a school established among them, and have a teacher employed, who would be competent to instruct them in farming, as well as in the construction of buildings generally; they live chiefly by fishing and hunting.

The circumstance of the establishment of the Northern and Western boundary of Ontario, placing this large extent of country under the control of our Courts, will enable us to carry out the provisions of the law, especially that with respect to the liquor question, with greater efficiency.

The Indians under the Robinson Treaty, who are located at Fort William, have not been benefited, by coming in contact with civilization, to the extent that would be desirable, however, they have made some considerable advancement in the right direction, having two schools established. A number of the younger members of Pic Band, are able to read and write, and to speak the English language, reasonably

well; on the north shore of Lake Superior, they live chiefly by fishing and hunting, and, having reasonable good hunting grounds, have no difficulty in providing the necessary supplies.

They are anxious to be provided with locations for settlement. This seems to be the more reasonable, as they have quite a large sum to expend in the construction of roads, the erection of school houses, &c.

A large number have been vaccinated, which seems to have given general satisfaction. Generally speaking they are healthy. Consumption seems to be the prevailing disease; this circumstance arises, I suppose, from their exposure to the inclemency of the weather, on their hunting excursions.

In matters of religion they are mostly Roman Catholic, except those at Michipicoten, who are connected with the Canada Methodist Church, and, are one of the most prosperous Bands under my supervision.

I have the honor to be,

Sir,

Your obedient servant,

AMOS WRIGHT.

No. 9.

(Translation.)

CAUGHNAWAGA, 27th September, 1878.

The Honorable

Superintendent General of Indian Affairs,

Ottawa.

SIR,—I have the honor to submit the following report in reference to the affairs of the Indians of Caughnawaga as required by your circular of the 14th August last. I send you a Tabular Statement as complete as it has been possible for me to fill it.

There are many good agriculturalists, in this village, and it is remarked that the lands are as well cultivated as in no matter what Canadian Country. The harvest of Indian Corn which is never wanting here, is in abundance this year, but as every where else they have harvested much less hay and potatoes than of late years. I believe that I ought to remark that the work of the quarries, which, however, has been very little this summer, has deterred and disgusted some few of the Indians from farming, and in waiting from day to day to be employed at the quarries, they have lost considerable time which they could have employed either in farming or in the shanties of the Province of Ontario.

The Village is not in as flourishing a state as it ought to be.

In conformity with your orders all persons resident without permission upon the Reserve have been notified to leave, and I think that it would be advantageous to the Tribe that the law should take its course in many of these cases, for there are strong and robust Indians who are better pleased to take tenants than to farm themselves, to spare themselves labor and to live in indolence. Dissentions exist in this Village which cause me to anticipate great misfortune; we have already witnessed the death of the unfortunate Meloche whose barns were burned the 11th May last and who perished in the flames; he was without contradiction the model of the farmers, and many Indians followed his example. There are still certain troubles which exist concerning the leasing of lands of this Reserve to whites; quite lately, near Ste. Marguerite, the barn of a poor Iroquois was burned with all his crop.

There are many Indians who desire enfranchisement and the division of their lands.

I am proud to tell you that the sale of wood to whites is completely stopped; drunkenness has greatly decreased in the village; there are still drinkers but very few drinking places, for out of twenty-two cantines which were here, I cannot count more than one, and I have this cause pending before the Court. They buy liquor at Lachine in spite of the watchfulness of Mr. Caisse, special constable, who I have strictly notified to watch the sellers so as to punish them. There are also many places at Montreal where the Indians procure whiskey, but it has been impossible for me to obtain sufficient proof to institute proceedings.

The children rarely go to school, consequently they scarcely know how to read and write, and strange thing, the parents do not appear anxious to send them there. The population is all Catholic.

I have the honor to be, Sir,

Your obedient servant,

G. E. CHERRIER.

Indian Agent.

No. 10.

QUEBEC,

LAKE OF TWO MOUNTAINS AGENCY,

OTTAWA, 16th September, 1878.

Honorable Superintendent General of Indian Affairs,

Ottawa.

Sir,—In compliance with instructions received in your circular of the 14th August last, I have the honor to transmit for the information of the Department, along with the Tabular Statement, the following report on Indian Affairs, within this Agency for the year ended the 30th June last.

As this is my first annual report since my appointment to this office here, it would be somewhat difficult for me to furnish the Department with full information on all matters of interest relating to the Agency. I will, therefore, confine myself to the narrative of a few leading facts connected with the Band under my supervision.

The men are principally occupied in shantying and farming, especially the latter, in which they appear to take great pleasure and delight. Some of them engage also in hunting and fishing at certain periods of the year, but to a limited extent. During the winter and spring seasons, a number of them are likewise employed in manufacturing snowshoes, moccasins, axe-handles, and lacrosses, which, particularly the last, they ship in large quantities to purchasers in the Cities of Quebec, Montreal and Toronto.

The women spend the greater portion of their time in making all kinds of fancy baskets, bead-work, bark-work and other small wares which they dispose of in Montreal and the surrounding villages, receiving in exchange therefor either money, clothing or provisions, and in this way render valuable assistance in maintaining themselves and their families.

I have found upon frequent enquiries, that the Indians here prefer agricultural pursuits to almost any other, and I am led to believe that they are quite sincere in what they affirm in this respect, from the fact that those of the Tribe who occupy and cultivate lands on the Reserve are most industrious and hard working men, and many of whom would rank as first class farmers among their more enlightened white brethren, while those who do not as yet possess any lands are extremely anxious to have such provided for them in order that they may be enabled thereby to make better provision for their families:

They are laboring under a great many serious disadvantages and have been for a number of years, owing to the exceedingly unpleasant difficulties which have so long existed between them, and the gentlemen of the Seminary of St. Sulpice of Montreal in regard to the respective rights of each to the lands of the Seigniori of the Lake of Two Mountains.

It is gratifying, however, to notice that a good deal of that ill feeling and bitter strife which has heretofore existed between the two parties to the dispute has apparently disappeared, while both entertain sanguine hopes that an amicable settlement of their difficulties will be finally accomplished by the Dominion Government at an early day.

Regarding educational matters, I am happy to record that the different schools in operation on the Reserve are in a progressive and commendable condition. Being under the management of qualifial and efficient teachers, every facility for acquiring a good elementary training is afforded the pupils in attendance, more especially is this the case in the Protestant school, which is purely Indian, where the children are instructed in the English language as well in their own, and it is pleasing to remark that there seems to be an increasing desire on the part of parents to send their children regularly to school that they may there gain such useful knowledge as will better qualify them for the duties and avocations of after-life.

As nearly the entire Indian population is Protestant, there are very few Indian children attending the Roman Catholic schools. Those taught in these schools are chiefly French Canadians.

Since the demolition and destruction, by order of the Gentlemen of the Seminary of the Protestant church in the year 1876, the French Missionary has been obliged to conduct his services in the school house which has been found entirely too small to accommodate all who attend.

The moral and social *status* of the Band is good, and I find them well behaved, honest and trustworthy.

The use of intoxicating liquors is almost entirely unknown among them. During the year only two cases of drunkenness came under my notice, and in both these, a fact I learned afterwards, the liquor was procured and given to them by French Canadians.

There is only one hotel in the village of Oka and the proprietor thereof, aware no doubt of the stringency of the existing law, prohibiting, under a heavy penalty, the sale or gift of intoxicants to Indians, is careful not to furnish them with it. The general health of the Indians is also very fair and there has been no sickness of any serious nature among them during the past year, and only some seven or eight deaths have occurred in that time.

That contagious and often fatal disease, the small-pox, broke out among them in the early part of last winter and proved fatal in two cases. Acting upon instructions from the Department, I had vaccinations promptly performed which had the desired effect of preventing the disease from spreading, and it eventually disappeared.

The various sums of money transmitted by the Department during the year for the relief of the aged, infirm and most indigent of the band were disbursed satisfactorily among the proper parties.

Apart from the assistance rendered them by the Department, they are, pending the settlement of their present difficulties with the Seminary, largely helped in many ways by the people of the Dominion and also the United States.

Their dwelling houses, which are chiefly log, are in a very delapidated condition. I have personally examined a large number of them, and find that they are so old, (some of them 100 years and over), and so out of repairs as to render them unfit for occupation. I understand, however, that it is the present intention of many of the Indians to erect new ones in their stead when the cold weather comes.

The French population on this reserve is much larger than the Indian, and the Indians are constantly complaining to me that these French squatters are a source of much trouble and annoyance to them.

They consider that these French people have no right whatever to settle on lands which are held in trust for their maintenance and support, and they express

the hope that the time will soon come when all these squatters will be removed from the reservation.

In the month of June, 1877, the Roman Catholic Church, with the buildings thereto attached, was totally destroyed by fire. The Indians, as you are aware, were charged, by the Gentlemen of the Seminary, with being guilty of incendiarism in this case, and fourteen (14) of them were arrested and incarcerated at St. Scholastique to stand their trial for arson.

It is now over a year since they were imprisoned, and during that time they have been tried twice before the Courts at St. Scholastique, and at both trials the jury disagreed as to their verdict and were discharged. Among the accused is chief Joseph Onesakenrat, who is a very active and intelligent man, and one who, with the other chiefs, is always endeavoring to ameliorate the condition of his tribe. They have had to remain in jail a great part of the time, as bail was refused. They are out now, however, on bail, and it is thought that the Gentlemen of the Seminary will abandon any further proceedings against them as the evidence of the prosecution thus far, has failed to convict them, while the evidence for their defence has shown pretty conclusively that they are innocent of the charge preferred against them.

I cannot conclude this report without referring to the great difficulty the Indians have in procuring wood for fire and building purposes.

The Gentlemen of the Seminary have in their employ four (4) policemen, two of whom were members of the late Provincial Police Force and hail from the City of Quebec, the other two are local men whose principal business I understand it has been for the last nine or ten years to keep a strict watch on the Indians to prevent them from cutting wood on the Reserve, and in a great many instances where they have been discovered chopping a few small trees for fuel they have been arrested, abused and dragged off to prison by these policemen. In this manner are the Indians deprived of even firewood to keep themselves and their families from perishing with the cold in winter, while the Gentlemen of the Seminary are shipping annually thousands of cords of the best maple, beech and birch from the Seigniorship to the Montreal markets.

The accompanying Tabular Statement contains all the information on statistical matters that it was possible for me to obtain.

You will observe that there is a decrease of eighty-nine (89) in the population of the Band since the year 1874. This is owing chiefly to the fact that some twenty-eight (28) families left here since that year on account of the unsettled state of affairs at Oka, and also because they had no lands here for settlement.

I have the honor to be, Sir,

Your obedient servant,

JOHN MCGIRR,

Indian Agent.

No. 11.

PROVINCE OF QUEBEC.

ST. REGIS AGENCY,

DUNDEE, 12th October, 1878.

The Honorable,

The Superintendent General of Indian Affairs,
Ottawa.

SIR—I have the honor to forward you the Tabular Statement, in connection with the Iroquois Indians of St. Regis.

The condition of the Indians is in no wise changed since my last report, and with the exception of the trouble with the Rev. F. Marcoux, about the removal of a

shed, which the majority of the chiefs and Indians claimed to be an obstruction of a near road-way, leading to the river, such peace and quietness has prevailed as is to be found in an Indian Village or Reserve.

In the name of one of the chiefs, three other chiefs and the father of one of the three, were arrested, for riotously demolishing said shed, which trial came off at Beauharnois on the 7th inst., but the prosecution failed to prove enough of riotous behaviour, or destruction of property, to convict, and they were released.

Such suits are to be regretted, if for nothing more, on account of the large amount of costs, which amount could be put to a much better use than paying it out for law expenses.

During the year some parties have been summoned to Court at Dundee for selling liquor to Indians, and one conviction rendered, but the person left for parts unknown, and has not returned to pay the penalty.

Since my last report school was opened on Cornwall Island, taught by a female teacher from Oka and was very well attended, but some slanderous reports being circulated about the teacher, she left and the school is now vacant.* The Indians to their credit are very anxious that it should be opened again as soon as practicable.

I am sorry to say that the curé does not seem to interest himself very much in the cause of education. No doubt it would have a very good effect were he to instruct parents to send their children to school, and visit the school occasionally.

I have met Indians from other Reserves, that seem to be more intelligent, and can speak the English language better than the St. Regis Indians do, and I cannot see but what these Indians have as many advantages as any of the Bands, that I have seen representation from, if they would use them.

The trouble I speak of between the Priest and Indians, is not through any religious difference, as they are all Roman Catholics.

I have the honor to be, Sir,

Your obedient servant,

JOHN DAVIDSON,

Indian Agent.

(Translation.)

No. 12.

QUEBEC,

AGENCY OF ST. FRANCIS DU LAC,

28th September, 1878.

To the Honorable

The Superintendent General of Indian Affairs.

Sir,—I have the honor to transmit herewith a Tabular Statement with my report upon Indian Affairs under my Agency, for the year ended 30th June last.

The number of the population has visibly increased; this is due to the fact that a large number of families, as well as individual members of the tribe, who have been absent many years, have returned.

20 families consisting of 61 souls, who still remain absent, with 300 residents, make up the total population of the Abenakis tribe.

This people has made some progress in its industries; agriculture has also slightly increased, in spite of which hard times are felt with them this year more than in the past. They evidently experience the effects of the commercial crisis, which has occasioned a considerable decline in the price of the articles composing their trade.

(*) This school has been reopened since the date of this report.

On the subject of schools I have ascertained that a certain number of parents are very remiss in sending their children to school; a good many others are punctual enough. Those who fail in this duty say they are too poor to dress their children properly and conformable to the severity of the seasons. This is perhaps true of several of them; there are, nevertheless, those who are altogether careless on the subject of the education of their children.

The books that your Department provided several years ago have considerably decreased, and those that remain are far from new.

The teachers are two Indians of this tribe, who instruct the pupils in French and English with explanation in the Abenakis language. These two teachers are very zealous in the performance of the duties of their office. The Government of the Province of Quebec has withdrawn the grant of \$140 which they had allowed up to a late date, to the Catholic teachers of this tribe, and the Protestant instructor has also lost a grant of \$100, which was paid him annually to assist in the work of instruction.

The chiefs await with impatience the final settlement of the indemnities, at the rates fixed by a certain report dated at Ottawa the 19th July, 1869, for the lands occupied by whites, within the limits of their reserve, and they hope that the Agent whose duty it is to take the necessary steps to bring this matter to a successful termination, will soon receive all the titles establishing the rights of these Indians to this property. They also hope that according to the request made by them, the bounds of the lands which they possess in the St. Maurice, at the point called La Tuque, will be defined with as little delay as possible, so as to allow them to reap the greatest benefit, and to prevent in time the establishment of whites on their reserve.

Your humble servant,

L. A. DEBLOIS,

Indian Agent.

(Translation.)

QUEBEC.

AGENCY OF LAKE ST. JOHN,

26th October, 1878.

To the Honorable

Superintendent of Indian Affairs,

Ottawa.

SIR,—In reply to your circular of the 17th instant, I have the honor to submit for the information of the Government, my report for the year 1877. I regret not having received your circular of the 30th ultimo, as well as the tabular statement forms sooner; this explains my delay.

Some Montagnais families, absent for many years, returned this spring to their Reserve at Lake St. John to settle there.

The census of this year is 289 souls, shewing an increase of 43 souls.

The harvest has been excellent. Wheat and other grains have given a good investment. Those who farm are much encouraged by the good results, they increase

their farming a little each year by new clearings. They have only one yoke of oxen for their farm work; this is not enough for the present, we are obliged to hire horses at a high price in the precious season of seed time and harvest; it would be an encouragement for them and at the same time a great economy as well if the Government would give them a pair of horses.

These Indians are submissive enough, many among them shew much aptitude for the cultivation of fields. What they want is the means, I am persuaded that the money granted them for this purpose would be well employed.

The lands of their Reserve are favourable for the culture of all kinds of grain, the climate is excellent, pasture abundant for raising stock. Hunting becoming more and more rare, it will become absolutely a necessity for them in a few years to make agriculture their sole means of subsistence.

A good number of them have comfortable houses, and each year they build new ones.

There are many kinds of industry, useless at present, on account of their distance from large towns. These Indians are gentle and polite, the Montagnais above all are honest; they are honorable in paying their debts and are very temperate.

Apart from some deaths (from natural causes), there has been no contagious disease amongst them.

The amount of money received from the Department to be distributed to the most necessitous Indians was \$299.92, and that for the purchase of seed grain, agricultural implements, &c., was \$187.76; the whole has been distributed and dispensed with the approval of the chiefs.

What I regret to report is the negligence of parents in sending their children to school. A small number attend regularly. I believe that a means of encouraging these children would be to distribute each week, to those only who attend regularly, some small article of little value but of a great price for them, such as a little shawl, a cap, &c. A small sum annually would be sufficient.

For the other information, such as the value of their goods, hunting, fishing, crop, &c., I refer you to the statement of 1876; there has been very slight change.

I have the honor to be, Sir,

Your obedient servant,

L. E. OTIS,

Agent.

No. 15.

RIVER DESERT, 2nd November 1878.

To the Honorable

Superintendent General of Indian Affairs,

Ottawa.

HONOURABLE SIR,—I have the honour to inclose herein the Tabular Statement of River Desert Indians for the year ended on the 30th June, 1878.

And I am happy to state that the Indians here are very healthy. Except some of them that are subject to consumption.

I have also to state that they are very poor which is owing to the hunting grounds being scarce of game, and the pieces low for what they kill, and to the fact that they are not the best of farmers.

I am, Sir,

Your obedient servant,

PATRICK MOORE,

Indian Agent.

No. 17.

NOVA SCOTIA,
INDIAN DISTRICT No. 2.
CORNWALLIS, K.C., September 5, 1878.

The Honorable

The Superintendent General of Indian Affairs,
Ottawa.

SIR,—I have the honor to submit, for the information of the Indian Department, the following Report with the Tabular Statement to the 30th of June last.

There are no reserves set apart for Indians in this county, and although they live mostly in slight framed houses, and have many of the comforts of civilized life, yet in the summer, they are somewhat migratory, following up the fishery on the Bay of Fundy shore, simply to obtain a daily existence.

One or two of them also engage in porpoise shooting, but the oil they obtain is sold to keen traders at half price, and does not amount to much.

I do not consider them improvident originally, but from the force of circumstances, which becomes a second nature.

Many of them are anxious to obtain lands for settlement, and would, no doubt, improve them to a certain extent, which would add, materially, to their comfort, and prevent that decrease in their number which is steadily, but slowly and surely taking place from the very nature of things.

I have received, from the Department, for the purpose of assistance to the sick, the aged and infirm within the year, and also for seed, when required, to the amount of \$79.75. Of this sum, there remains on hand—June 30, 1878—\$13.22; these sums are exclusive of \$9.22 received for medical aid.

There are no schools for Indians here particularly, but all schools are free, and one family, in South Keswick, send three constantly to the school there.

I have the honor to be, Sir,

Your obedient servant,

J. E. BECKWITH,
Indian Agent.

NOVA SCOTIA, INDIAN DISTRICT No. 2,
CALEDONIA, 22rd September, 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to submit for your information the following Report, with accompanying Tabular Statement.

Previous to my assuming the Agency of this District, I found matters in a very unsatisfactory state, owing to the encroachment by White men on the Reserve grounds. I hope to have this grievance removed in a short time.

The Indians of this District live principally by fishing and basket-making. A few of them live comfortably by farming. They are very much in want of a few ploughs, &c.

Very few of them live on the Reserve, owing principally to the want above mentioned. I must confess, however, they are the most comfortable who reside permanently on the Reserve.

I have not succeeded as yet in obtaining a purchase from the Indians of the island in Keyemkegoeh Lake, owing to the temporary absence of a few of the leading Indians.

The Indians of this District are a quiet, inoffensive class of people, attending very regularly to their religious duties.

There are no schools nor teachers for the Indians of this District.

I have the honor to be, Sir,

Your obedient servant,

THOMAS J. BUTLER,

Indian Agent.

NOVA SCOTIA, INDIAN DISTRICT NO.

CHESTER, 23rd September. 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR,—I have the honor to submit, for the information of the Indian Department, the following Report:—

Ever since my appointment to the Agency, which has been within the last few months, I have had much satisfaction in observing a marked change in the habits of the Indians of my District. They are beginning to evince, every day, a much stronger desire for agricultural pursuits than heretofore. Many of them have purchased small pieces of land, especially in Bridgewater, where they are replacing the old wigwams with comfortable houses. Those living on the Reserve have been favored with good crops of wheat, barley, potatoes and oats, and are now preparing the land to sow more extensively next spring. I do not know of any Indians engaged in shore fishing, but the river, on which they depend principally for a livelihood, have rewarded their labors this spring with bountiful results. Owing to the Indians being very much scattered, living in groups of three and four families, at a distance of twenty and thirty miles apart, I regret it is impossible for them to have a school. The Nictaux and Atlantic Railway, now in course of construction, has given employment to a great many during the past few months, and should the work continue, I feel encouraged that there will be but little suffering from indigence the coming winter. As a rule, the Indians here are a temperate people, and attend strictly to their religious duties. They are all Roman Catholics. The money I received in the spring for the relief of destitute Indians, I have distributed as my judgment best directed me, and I hope to the satisfaction of the Department. I also received \$30 for grain seed, a part of which I expended in purchasing potatoes, barley, oats, &c. I will forward immediately receipted accounts for the money received.

Owing to my recent appointment I regret I cannot send a true tabular statement this year.

I have the honor to be, Sir,

Your obedient servant,

E. J. McCARTHY.

PARRSBORO', 28th Sept., 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to submit, for the information of the Indian Department, the following report, with tabular statement, to the 30th June last.

Having received my appointment so recently my report will of necessity be brief. I have been unable to obtain all the information required in the tabular statement; but so far as it goes, what I have filled in may be relied upon as accurate.

I find there are from sixty to seventy resident Indians in this county, and about as many more who come from adjoining counties to spend the summer here.

The principal Indian settlements are at Half-way River Lake, Athol, Spring Hill and Amherst. There are no Indians living on the Reserve. I cannot precisely state whether there has been an increase or decrease in the population, but incline to the opinion that they are gradually growing less.

Our Indians here are poor, and are at times reduced to extreme want.

Hunting is carried on to a limited extent, during the fall and winter months. During the summer they make firkins, tubs and baskets, from which they derive the greater part of their support. As a rule, the Indians here are temperate, cases of drunkenness being extremely rare.

The Reserve was formerly well wooded, but has been plundered till but a little valuable timber remains.

I have the honor to be, Sir,

A. S. CLARKE,

Indian Agent.

NOVA SCOTIA, INDIAN DISTRICT No. 11,

INVERNESS, RIVER INHABITANTS,

24th September, 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR,—In compliance with the request of the Department of the Interior, Indian Branch, of date 14th ultimo., I beg to transmit my report of the Indians (Mic-mac Tribe) of Indian Reserves at Whycocomagh and Malagawatch, for the year ending 30th June, 1878.

The tabular statement accompanying this report will, I hope, furnish the Department with all the statistical information required.

Some of the Indians under my Agency are unjustly used and trespassed upon by some of their White neighbours by fencing and improving, ploughing and sowing on the Indian Reserve at Whycocomaga against the will and consent of the Indians occupying the same, and driving away the poor Indians when they begin to plant on parts of said Reserve. On one occasion the White people took from them their hoes (planting implements), spilt and scattered their potatoe seed on the ground, and sent them away by force and threats. These *white* trespassers maintain that they will not give up these fenced in fields until they will be paid for the trespassed improvements. They are also yearly cutting and carrying away wood for fuel, fence poles, &c., for their own use and selling it against the will and consent of the Indians and not paying them for either wood or poles. The Indians on these Reserves are a law abiding people, and they are in hopes, from year to year and from time to time, the Indian Department will take such measures as will stop these trespassers from intruding on them. Some are unable to keep a cow or a sheep on account of their White neighbours fencing and keeping from them their meadow and pasture land.

In my tabular report I have included the prices of Indian Reserves fenced in by the trespassers on the lots laid out for the Indians and occupied by them.

I understand that the \$120 aid money annually given by the Department (the one-half for seed-grain and potatoes in the spring) has always been semi-annually divided equally among heads of families, is not alone used for seed; but also in paying to plough and manure the land to put the seed in.

Many of them are poor, yet not all from idleness. The chief causes are improvidence, the high price of provisions and dry goods, and the fact that they get much less for their work at the Reserves, such as butter-tubs, keellers, churns, washing-tubs, baskets, &c, &c., than they get some distance from home in other parts of the county and Province, and also, the advantage their White neighbours take of them in driving their cattle on the Reserves in summer, which for want of good fences eat and destroy their grass, crops and pasture.

Fishing is not followed by them as a business; yet the Indians occasionally spear eels and cod fish, and a few salmon when they can get them and some other kinds of fish for their own use, but do not sell much.

The Indian school on the Whycocomagh Reserve is taught by a John McEachen, well qualified and of many years experience, is well conducted and giving general satisfaction, but the average attendance is not all that I would expect or desire.

About one-half the children attending school are orphans, some of them brought up by their grand parents; the concomitant difficulties that naturally attend the want of warm clothing, shoes and moccasins, in conjunction with the want of school apparatus, account very materially for the non-attendance of the children. Notwithstanding these difficulties, so much calculated to impede the progress of education, some of the Mic-mac school-going children can read, write and cipher with astonishing facility, and their knowledge of geography is truly surprising.

The Indians are not the best of farmers, yet I am happy to report a decided improvement in such of them as devote the most of their time to agricultural pursuits, and the rising generation with the advantage of the school for which they feel grateful, will have a better opportunity.

The timber mentioned in the tabular statement accompanying this report was timber made by the Indians, with a few others to assist them, and sold by them, and for their benefit.

The quantity of wood for fuel and fence poles taken by the trespassers I am not yet in a position to ascertain.

The Indians, both male and female, coming under my Agency, are with very few exceptions industrious and of very sober habits; many of them are teetotallers.

The resident Presbyterian Minister at Whycocomagh, Rev. Mr. Stewart, and some other gentleman, there are very charitable and kind to the "Aborigines" in relieving them in extreme want and indigence, which is quite at variance with the doings of some of their other white neighbors. During the year there have been four marriages, ten births and seven deaths, viz: four grown up persons and three children.

I have not heard of any contentions among them worth notice. Cases of gross immoralities are of rare occurrence among them, owing, I presume, to the salutary instructions of their missionary priests attending on them.

There has been no contagious disease amongst them during the past year.

I have no funds at my disposal for occasional relief of the aged and infirm members of the Band, who are depending on their friends who are in very limited circumstances themselves.

The Indians complain that a main public road was laid out and finished through their meadow land last year without any compensation being allowed them for soil or fencing, but I do not know from what funds they can get compensation.

All which I most respectfully submit.

I have the honor to be, Sir,

Your obedient servant,

DONALD McISAAC, P.P.,

Indian Agent.

NOVA SCOTIA, DISTRICT No. 12.

No Report from Mr. MCGILLIVRAY.

No. 28.GRAND NARROWS, CAPE BRETON,
24th September, 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

DEAR SIR,—I beg to submit the accompanying Return of Indian Affairs in the County of Cape Breton. As I have only received my appointment in May last, I cannot report progress in any particular branch.

School is in operation at Escamoni since the 1st of May, and giving general satisfaction.

Respectfully yours,

M. McKENZIE,

Indian Agent.

No. 29.CHATHAM HEAD, N.B.,
3rd October, 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to submit, in accordance with instructions, the Annual Report on Indian matters for the year ended 30th June, 1878.

I am pleased to report an improvement in many of them having given rather more attention to farming, and in other places more attention to fishing.

There is an apparent increase in the population, but I may not have been able to get them all last year, they are so migratory. They are very anxious to have schools amongst them, but it is a difficult matter to get them to assist in any way towards preparing for the same.

I have, however, had one school opened for three months, taught by an Indian, and you will observe by tabular statement, that the attendance was fair, and I think with better arrangements, &c., the schools would work to good advantage to the Bands.

As regards habits, &c., there is not much difference, the majority of them are still heedless of the future.

It is difficult to prevent them from procuring intoxicants, as many White people will purchase it from the liquor dealers for them, and in those cases it is almost impossible to bring the proof home.

I enclose statement which will furnish the Department with all the statistical information.

I have the honor to be, Sir,

Your obedient servant,

CHAS. SARGEANT,

Visiting Superintendent.

No. 30.

FREDERICTON, N.B.,

19th December, 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to enclose tabular statement for the year ending the 30th June, 1878, connected with Indian Reserves within my superintendence.

I have made it up with great care, and where I have not been able to give exact figures, have approximated as nearly as possible.

I find the Indians in some of the localities very unwilling to give me information, from the fact of my not distributing more among them, which is certainly not my fault; although I know they believe that I am to blame and could easily give them more. It is certainly an unfortunate state of things, and I do think that they have been hardly dealt with, and if a reasonable amount were supplied them I should have very much less trouble.

I will communicate more fully again regarding aid.

Report will be sent very soon.

I have the honor to be, Sir,

Your obedient servant,

WILLIAM FISHER.

NEW BRUNSWICK,

WESTERN SUPERINTENDENCY,

FREDERICTON, 27th Dec., 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to inform you that, in accordance with your circular of the 14th August last, I herewith enclose a report upon Indian Affairs connected with my Superintendency for the year ending the 30th June, 1878.

The tabular statement forwarded by me a few days since to your Department is as complete as I could possibly make it, under all the circumstances, and you will no doubt find the information therein contained useful for your general annual report.

Having reported so fully formerly there does not appear at present much to report upon, except in some particular points, to which I shall now call your attention.

The concurrence given by the Indians to the Tobique Indian Reserve some time since has been the means of enabling me to sell at public auction, in the same manner as that pursued by the Government of New Brunswick, and the result so far for the winter of 1877 and 1878 has been exceedingly satisfactory, a certain sum having been derived from stampage and placed to the credit of the Hon. Receiver-General of Canada, on account of Indian Funds, thereby preventing the lawless trespasser from appropriating to his own use improperly, which has unfortunately been too much the case for a long period, more or less annually, and particularly in consequence of the carelessness, negligence and very great indifference of the Indian people belonging to that Reserve, in not looking after their own special interests in that respect; and also preserving from danger of forest fires the value of at

least a certain portion of the timber on the Reserve, with a prospect of adding something more to Indian Funds from the same source, during the winter of 1878 and 1879.

The Indians belonging to the Reserve at Woodstock, in the County of Carleton, although often requested to assent to permit the Indian Department to dispose of the few hundred sawlogs, and probably other timber in that Reserve, in the same manner as that of the Tobique Reserve, still adhere to their former determination not to do so, which for many reasons is to be regretted.

Regarding schools, in my last annual report, among other things, I called the attention of the Indian Department to the fact that the Indians of the Tobique Indian Reserve had at last agreed among themselves, and come to the conclusion to have a school established upon the Reserve, and would like to know how much money the Department would allow a teacher annually, provided they selected a suitable person; and they also wished to ascertain whether the Department would grant them a certain amount for the repairing of a building which could be used as a school house, and would give in addition something for furniture, books, etc., etc., for the purpose of enabling them to carry on the school for the benefit of those connected with the Reserve. The reason they give for requiring additional aid for furniture, books, etc., etc., is that they are too poor to purchase the articles enumerated; and unless they are assisted in this manner they would very likely not be able to carry on the school. I do not apprehend that the cost of the articles mentioned would amount to much, and should like to see a beginning somewhere; and if a school was once established at Tobique it might lead to a similar one being established at Kingsclear, in the County of York, the Indians of which Reserve feel anxious to have a school among them upon a similar basis, and the result would be advantageous.

During the spring, when I visited the Indians of Little Falls Reserve, in the County of Madawaska, I met John Costigan, Esq., M.P., John J. Hodgson and John Hartt, Esquires, of that County, and an arrangement was entered into by which several Indian children of that Reserve were admitted into the common school of that district, and I had the great pleasure of visiting this school and seeing the little Indian boys and girls, looking clean and neatly dressed, in their respective seats, together, quiet, orderly, and conducting themselves as well as need be, presided over by a young lady, apparently well qualified and also accomplished, with whom I had some conversation regarding the care and attention I should like to see bestowed upon the Indian children, and have no doubt that in due time, if they are permitted by their Indian parents to continue their attendance, will shew the fruits of their assiduity and the teacher's training.

The Indians of the Tobique Reserve, in the County of Victoria, as well as the Indians of the Woodstock Reserve, in the County of Carleton, and the Indians of the Kingsclear Reserve, in the County of York, would like to have their several Reserves surveyed, and I think it would be prudent to have the same done, because the boundaries in all these Reserves require defining, particularly so regarding the Kingsclear Reserve, for to my certain knowledge there have been slight disputes among the adjoining farmers and some of the Indians, each party claiming the land the line fences on which appear uneven; and it might be the means of preventing fiercer disputes, and lead to a better understanding between the Indians and their White neighbors; and, in addition to the defining of the boundaries, it would be well at the same time to divide a portion of each Reserve into lots, so that any Indian who might desire to occupy and farm could do so, and know exactly what part of the Reserve is really appropriated for his own purposes, and might be a means of causing them to become more ambitious, and ultimately lead to an improvement in their condition, which is very desirable.

During the early part of the current year I had a great deal of trouble with the Indians, in consequence of the too free use of intoxicants among them. Having called the attention of the Department to this matter so fully, previously, it is needless to say anything more than to state that the chief difficulty lies in being

unable to get some of the magistrates and police authorities to perform their duty. There has not appeared to be as much intoxication among the Indians latterly, but I attribute it somewhat to the scarcity of money among them, although the existence of the very strict laws regarding the sale and giving of intoxicants, with the additional threatening on my part, has been the means of doing some service, but a more efficient remedy is, I am happy to state, near at hand in some of the districts at least, and that is the removal of the cause of the terrible temptation from amongst them, through the operation of the Temperance Permissive Act, so called.

Having called the attention of the Department long since to the small amount of pecuniary aid and seed money distributed among the Indians within my Superintendency, for some years past, and more particularly during the current year, it appears to me to be necessary to go more into detail than formerly; but if you will examine and compare the amount bestowed upon the Indians of New Brunswick, with that of Nova Scotia and Prince Edward Island, of the Maritime Provinces, not speaking of Ontario, Quebec, and other Provinces in the upper part of the Dominion, you will find that the medical treatment of the Indians of New Brunswick has been sadly and unjustly neglected, and with the exception of some small amounts paid to medical men for services and medicines in some parts of my District (I do not allude to the extraordinary expenditure made for small-pox and vaccination during one or two of these years, but I am speaking of ordinary annual expenditure among the Indians), I do assure you that, with the exception above, I have had to pay medical men and for medicines solely out of the small amount sent to me for pecuniary aid, and have at times been constrained from necessity to withhold medical aid in consequence of being compelled to take from the pecuniary aid funds, and even then having for that purpose a sum quite inadequate to the wants of the Indians. You have hardly any idea of the difficulty experienced in meeting their pressing wants at particular periods. The fact of the matter is that, generally speaking, all the blame falls upon the agents thus placed, the Indians in some cases believing that the agents appropriated the funds to his own uses, and in others could very easily obtain all the money required.

I sincerely trust that your review of the whole question of funds sent to me for years past, that you will see the absolute necessity of increasing the amount for pecuniary aid, seed and for medical purposes. A small additional sum in each case would probably meet the difficulty, and place me in a position not so humiliating as at present. I know that the demands upon the Dominion Exchequer are large, but justice ought to be done to the Indians of New Brunswick notwithstanding.

I cannot note any progress in agriculture, and certainly much cannot be expected when the small amount of money appropriated for that purpose is taken into consideration.

In some cases, owing to the great poverty of the Indians, and want of appliances to put the land in order, some of the money specially appropriated for seed is used for the purchase of food. Although I have strongly remonstrated against this course, and believe that the difficulty could be overcome partially, at least, if the Department could bring itself to believe that the Indians rightly deserved and required more assistance.

I have the honor to be, Sir,

Your obedient servant,

WILLIAM FISHER,

Visiting Superintendent.

No. 32.

MANITOBA SUPERINTENDENCY,
WINNIPEG, 31st October, 1878.

The Honourable,
The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to acknowledge the receipt of your circular letter dated the 14th of August last, together with your circular letter of the 17th inst., No. 9,570, requesting me to send you a report, with statistics, &c. with regard to the Indians in this Superintendency.

I beg to answer that, under the new organization of this office, no report of this kind can be sent unless the necessary information is supplied by the Agents or by the Inspector of Agencies.

The Agents, I believe, have been instructed to report direct to your Department, and the Inspector of Agencies has never communicated to this office any information or report that would enable me to answer your above-mentioned circular as it is expected they should be.

Under these circumstances I have the honor to represent that there is no information in this office that could afford me the means of sending you the information or the report asked for.

I have the honor to be, Sir

Your obedient servant,

JAS. F. GRAHAM,
Acting Indian Superintendent.

No. 33.

COUCHICING AGENCY,
RAINY LAKE, 25th September, 1878.

The Honorable
The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to transmit tabular statement, with Report on Indian Affairs within this Agency for the past year.

On the 23rd July, 1878, I made the payments to eleven Bands at this Agency, although the time named for the supplies to be delivered at this place was the 12th July, only part of them reached on the 2nd July, the gilling twine did not arrive till the 19th September.

On 25th July, I started to pay the Lac Seus and Mattawan Bands, the former I paid on the 31st July and the latter on the 4th of August. The Indians of Wabiyon and Eagle Lakes I paid *en route*.

Reserve No. 18.- Mickiseese and Gabay, Rainy Lake.

These Chiefs have their Reserve in common but they do not agree, they wish their several Reserves to be separate. The Half-breeds are paid their annuities with Mickisees, and although both the Indians and Half-breeds have excellent land on their several Reserves, they hardly raise enough potatoes to pass the winter. A

small quantity of wheat and barley was given to them last spring, but on visiting the Reserve I found that they were too indolent to put up fencing, and the cattle destroyed the grain.

They have six houses and one stable. They have only received one ox; a requisition has been sent for the remainder. The Half-breeds who are with this Band have also four horses.

Reserve No. 26.—Naitawee Comickinung, Rainy Lake East.

This Band planted sixty bushels of potatoes, and also sowed one bushel each of wheat and barley, but the Chief informed me that it did not ripen. They have requested part of their cattle this season, and they appear anxious to improve their condition. They have three horses and one stable.

Reserve No. 17.—Whashesconce, Rainy Lake N. W.

This Band planted 20 bushels of potatoes and also a small quantity of wheat and barley, but I am sorry to say did not succeed. They are not prepared to receive their cattle, they are making preparations for next season. They have only one house.

Several of this Band still plant on their old gardens, which are principally on Islands.

Reserve No. 27.—Kakkeewayash, Wabegon and Eagle Lakes.

This Band have their Reserves on Wabegon and Eagle Lakes only part of this Reserve was surveyed, as the surveyor was recalled; they are anxious that the remainder should be surveyed. They planted seventy bushels of potatoes last spring. They have ten houses. They are not prepared to receive their cattle.

Reserve No. 14.—Keetcheeingahcehung, Rainy River.

This Band plant corn and potatoes; they have not made much advance as only the Chief and few of his followers reside on the Reserve; they have three houses. They have received all their cattle, but lost four head last spring partly by accident and want of proper care.

Reserve No. 15.—Guscongin, Rainy River.

This Band still plant on the American side, as they had their gardens on that side before the treaty. They plant corn and potatoes.

This Band have received all their cattle, but have lost three head by accident and want of proper care. They have three houses.

Reserve No. 13.—Mawintoobinese, Rainy River.

This Band plant corn and potatoes, they also sowed some wheat and barley. They have three houses and have received all their cattle; they lost one cow last winter by being hurt on driving from Winnipeg to the Reserve. Only the Chief and three of his followers reside on the Reserve, the remainder of the Band are wanderers.

Reserve No. 12.—Neeshotai, Rainy River.

This Band plant corn and potatoes, they also sowed some wheat and barley. They have four houses. They have received all their cattle.

Reserve No. 11.—Keetchekaikake and Maskeekeenenie, Rainy River.

These Bands have their Reserves in common; they plant corn and potatoes. The latter Chief has only three families who reside on the Reserve, the remainder of the Band reside at N. W. Angle. They have been notified that they must reside on the Reserve and cultivate the soil. Baitcekipenesse, the Chief of one these Bands, died spring 1878, and his son was elected as per Sect. 61 of Indian Act. They have three houses, and Keetchekaikake has received all his cattle.

The other Bands are not prepared to receive their cattle.

Reserve No. 10.—Reejickookai, Rainy River.

This Band plant corn and potatoes. They sowed some wheat and barley, but owing to the Chief and part of his followers leaving the Reserve to visit the Sioux Indians at Devil's Lake their gardens were destroyed by their cattle. They have three houses and one stable. They lost an ox by falling on the ice in driving from North-West Angle to the Reserve.

Reserve No. 28.—John Cromastie, Lac Seul.

This Band only plant potatoes, they planted 157 bushels last spring. Seed grain will be sent to them for next season, as they are anxious to plant and sow corn and wheat. They have 17 houses and one stable. The Reserves of this Band, as you are aware, have not been surveyed, and the Chief is anxious that the three several Reserves which they have chosen should be surveyed. Two are on Lac Seul and one on Shoal Lake, and as the distance from one of the Reserves to Shoal Lake is fifty miles, they have requested cattle for this part of the Band, and also tools and saws. They have lost four head of cattle partly by accident and partly by want of proper care. This Band have requested a teacher.

Reserve No. 21.—Saeketcheway, Mattawan, English River.

This Band have small gardens of potatoes, they planted 118 bushels of potatoes last spring. They are anxious that their Reserves should be surveyed as they still plant in their old gardens. They have choosen a place on English River named Assuhescousewecah for one of their Reserves and the other at entrance of Mattawan River. They have also applied for a teacher. Only part of the cattle have been received by this Band. They have requested the remainder this season. This Band have 12 houses, four at Mattawan and eight on the other location.

Liquor.

As there are no police in this section liquor is brought in both from Thunder Bay and Winnipeg, and in two instances given to Indians: the first was a raid the River Indians made on a whiskey dealer and seized his liquor, the second was a present given by one of the dealers to several Indians, and they could not resist the temptation. The dealers always camp on the American side and neither the Whites or Indians will inform.

Teachers.

There is a general desire amongst these Indians to have schools established; not only to teach their children reading and writing, but also the young men to plough and the use of tools.

I am sorry to say that notwithstanding the River Indians have received cattle and ploughs, very little land has been broken up, although on five of the Reserves the land has been cleared, as they have been sites of ancient villages.

Notwithstanding the low price of furs, the Indians have had fair returns for their hunts, as the Hudson Bay Company only slightly reduced the price of furs, and as rabbits were numerous they did not suffer for want of food, and this season the wild rice has been abundant.

The general health of the several Bands has been good. The diseases most common are scrofula and those brought on by exposure to cold, and I am sorry to report several cases of venereal. Dr. Robinson has administered to these Indians since his residence here.

I have the honor to be, Sir,

Your obedient servant,

R. J. N. PITHER,

Indian Agent.

No. 34.

ASSABASKASSING AGENCY, 16th December, 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR,—I have the honor to acknowledge the receipt of your letter No. 9,570, dated 17th October last, here on the 11th, and in reply.

The circular with the enclosed tabular statement, dated 14th August last, addressed to me by the Superintendent General of Indian Affairs, I only received here on the 26th October last, brought by chance opportunity from Rat Portage one day before the lake where I am closed with ice, and from that date to within a few days back the ice has kept weak, unfit to travel on, caused by the long continuation of mild weather, and another thing, at the time I received the circular I was laid up with sickness which kept me from attending to my work to within a few days ago; having no person within reach that I could call upon to assist me, I had to wait until I recovered to attend to the tabular and report, which I have sent off, though imperfectly, alone to Rat Portage on the 9th inst., hoping from thence to be sent to Winnipeg.

One great draw back I have where I am, no mail ever passed here with the exception of the one that brought your present circular since I have been appointed Agent, and instructed to have my residence here. I have had to hunt up letters sent to me at my own expense, and in many instances letters have been brought to me by chance persons passing my place, and in such cases often I have to pay them dearly for their trouble; often occur that letters of business from Winnipeg are one to two months old before I receive them, in consequence it is impossible for me to do my work to satisfy my employers.

Another thing, I am expected to send a monthly return of statements of the distribution of provisions to destitute Indians; to fulfil this duty I have to send monthly either to North-West Angle or to Rat Portage to get them forwarded from thence to Winnipeg, which I do at my own expense, and it is not every time when I have to send that I can find a person at hand to do the work.

If nothing is done for the better in sending off and getting in my letters of business, I cannot be expected to be able to satisfy my employers.

I have the honor to be, Sir,

Your obedient servant,

G. McPHERSON,

Indian Agent.

No. 35.

MANITOBA, DISTRICT No. 2,

MANITOBA HOUSE, 14th September, 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—Herewith I have the honor to transmit tabular statement with report on Indian Affairs within this Agency for the past year.

I beg however to premise that I have not succeeded in getting a correct tabular statement.

The affairs pertaining to the Bands under my care, I am happy to say have gone on satisfactorily during the time they have been under my supervision.

Lake Manitoba.

This Band numbers 171, showing a decrease of 47 since last year.

This Reserve has been surveyed last winter. They beg to ask that their Reserve be extended beyond Dog Creek, so as to include farms which were under cultivation before the Reserve was laid out. Should their request be granted it would extend the Reserve a mile or so to the west.

Ebb and Flow.

This Band numbers 176, showing an increase of 84 since last year.

The experience has shown that the land for farming in parts of this Reserve is not suitable for that purpose, being subject to inundation in wet seasons, causing great losses in consequence thereof.

They beg to ask that a certain ridge situated about one mile and a half to the west side of the present Reserve be granted to them for the purpose of farming.

Water Hen.

This Band numbers 117, showing an increase of 3 since last year.

These Indians want their plan of the Reserve altered as follows:—

The west part to be extended as far as a small river running about one mile west. The reason for their wanting this is that fish are plentiful in this river as well as that several farms have already been cultivated here.

Fairford.

This Band numbers 204, showing an increase of 26 since last year.

The Indians of this Reserve are divided into two distinct villages, one at the "upper" and the other at the "lower" end of the Reserve, making a distance of five miles apart.

Great confusion is caused here in consequence of their being only one school; the distance being too great for children living in the upper village to walk to the lower village.

The Indians of the upper village beg that a school and teacher be given to them, having a sufficient number of children to form a school of their own.

Lake St. Martin.

This Band numbers 104, showing a decrease of 17 since last year.

Contentment generally prevails among the Indians of this Tribe.

Little Saskatchewan.

This Band numbers 91, showing an increase of 10 since last year.

The Reserve has not yet been surveyed for this Tribe, causing great dissatisfaction amongst them.

They are desirous of having the survey completed this year if possible.

Riding Mountain.

This Band numbers 108, showing a decrease of 43 since last year.

There is no timber suitable for building purposes.

The Indians beg permission to cut pine on Government land.

I have the honor to be, Sir,

Your most obedient servant,

H. MARTINEAU,

Indian Agent.

No. 36.

PROVINCE MANITOBA, ST. PETERS' AGENCY,

TOWN FORT GARRY, 30th September, 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR.—I have the honor to submit the following report on Indian Affairs in this Agency.

I have, however, to regret that I have been unable to procure the necessary statistics with which to fill up the tabular statement.

This Agency includes the St. Peters, Brokenhead River, Fort Alexander and Black River Bands.

Each of these bands received seed grain and potatoes in the spring, and there is every appearance that they will reap a good return, although in some places the carrots, onions, and even potatoes were cut down by a kind of grub.

The St. Peter's Band is the largest one in my Agency, numbering 1,601 persons, and, being situated in the settlement belt, is the most advanced in agriculture.

About two-thirds of the number are living in good log houses in the Reserve, along the banks of the Red River and Netty Creek, and doing more or less farming, some having as much as twenty or thirty bushels sowed this year.

In the fall the most of them go to the lake for white fish, which forms a very important item in the winter stock of food. Except for two or three months in the year, there is generally a plentiful supply of fish in the river and creeks.

In the spring of the year they turn their attention to hunting musk rats, of which large numbers are taken annually. The balance of the band live in huts, either on the Reserve, in different parts of the settlement, or winter out on the lake, hunting and fishing,

A few are very comfortably settled outside of the Reserve, on lots which they held before the treaty was made.

The greatest difficulty here, and the one that has caused much dissatisfaction and trouble, is in regard to that portion of the Reserve forming the inner two miles on each side of the Red River, which at the time of the treaty was owned and occupied by individual Indians, they having either bought or received it from the Chief; they have since that time sold their claims to white men, who now insist on their right to occupy the lots; this the Indians resist, and claim that no purchase of land in the

Reserve, subsequent to the treaty of 1871, is valid, and that all trespassers should be turned off the Reserve with as little delay as possible.

There have heretofore been two schools on the Reserve, attended by both Indian and White children; but on account of a disagreement about a teacher, the school was in February last closed by the trustees, against the Indians, as already reported; and although since reopened by the trustees, who employed a teacher without consulting either the wishes or interests of the Indians, very few of the Band children attend it.

Brokenhead River.

This Reserve is occupied by two Bands—the Heathen, or Fort Garry, and the Christians; the former has about 426 members, the latter only 73. These were formerly included in the St. Peter's Band, but having established themselves at Brokenhead River, they have been paid there and otherwise looked upon as a separate Band, although their Chief and Councillors have not yet been fully recognized by the Department. They have settled down on the Reserve and have built houses, but so far have made very little progress in agriculture.

The Heathen or Fort Garry Band, has not, with the exception of the Chief and a few followers, yet settled down on the Reserve, being scattered all over the country from Pembina to the Portage; a great many have however signified their intention this year of settling down and learning to farm.

There has been no school on this Reserve for the last three years.

They make their living almost entirely by hunting and fishing.

Fort Alexander.

This Band has about 445 members English and French, but under one Chief. They have two schools, one in connection with the English Church Missionary Society, the other with the Roman Catholic Mission. The latter has been regularly kept up by Mr. Tabouret, who is one of the best teachers in my Agency, although his whole salary from both the Department and the Mission only amounts to \$250 a year. I was very much pleased to notice the improvement during the year in the pupils on my last visit.

The English School has now been closed for several months, as I have found it impossible to secure the services of a suitable teacher for the Departmental allowance of \$150 per annum.

The members of this Band are rapidly settling down on the Reserve, building comfortable houses and turning their attention to farming, although the land along the River is wooded and a great deal of labour is required before any return can be obtained.

They procure the greater part of their winter food from the fall fishing—the most of them hunt during the winter and spring.

Their supply of grain and potatoes has been well cultivated and promises a good crop.

Black River.

This Band has only 51 members, all of whom, with the exception of a few who are in the Hudson Bay Company's service, are settled down on the Reserve and have houses with small plots of land under cultivation.

They have a school which is very fairly attended, and the teacher, Mrs. Hope, a member of the Band, apparently takes great interest in it; but they labour under the disadvantage of having no school house, the school being kept in the dwelling of the teacher—and are very anxious to have one. Already they have timber and logs on the lot they have laid aside for school purposes, but want assistance in putting it up and finishing it.

In the fall they lay in their stock of white-fish and through the winter occupy themselves in hunting.

They are very much disappointed that their Chief and Councillors have not yet been recognized by the Department, and are anxiously expecting that it will soon be done.

In conclusion, I beg to say that the health of the Indians in my Agency during the past year has been fairly good, with the exception of an epidemic of scarlet fever in the St. Peter's Reserve, in which, owing to the kind and humane attentions of several ladies and gentlemen connected with the Church Mission Society, the disease was not more fatal than in other parts of the Settlement which it visited.

There has only been one conviction for selling liquor to Indians. This is not due to the want of cases but to the lack of proof.

I have the honour to be, Sir,

Your obedient servant,

DAVID YOUNG,

Indian Agent.

— — —
No. 37.

PORTAGE LA PRAIRIE AGENCY,

26th September, 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR,—I have the honor of transmitting to you tabular statement of census of the several Bands of Indians under my charge for the year ending 30th June, 1878. The Band of Indians acknowledging Yellow Quill as Chief, have their Reserve in Township five, in Range 11 west, in the Province bounded on the south by the Swan Lake or Pembina River, and comprising about 11,200 acres of first quality farming land with a considerable portion of wood. The members of this Band are not satisfied with their Reserve, and will not settle down on it, as they claim their Reserve should extend from the Assiniboine River on the north to the Pembina River on the south. This Reserve was set apart after the renewal of the Treaty by Ex-Governor Morris in 1876, and surveyed by J. L. Reid, Esq., Dominion Land Surveyor. I had no means of obtaining accurate information with regard to the amount of fees taken during the year, as most of the Indians leave for the hunting grounds as soon as the payments of their annuities are made in July, and what little farming is done by them is done on pieces of land which they had under cultivation previous to the Reserve being set apart.

The Band of Indians acknowledging Short Bear as Chief, have their Reserve on the north side of the Assiniboine River, in Townships 9 and 10, in Range 8 west, in this Province, comprising about 10,780 acres of mostly timbered land, soil of a light sandy loam except in River Valley, where it is rich clay loam, and well adapted for all kinds of grain and vegetables. The potatoes and other root crops look well. A number of this Band remain about the settlement and find considerable employment during haying and harvesting, and attending to cattle and cutting wood during the winter months, by which they make a livelihood. They too are quite dissatisfied as they say the Government is not carrying out the promises which were made at the time the treaty was made in 1871.

The Band of Indians acknowledging Nahweecheewaykapow as Chief, have their Reserve at the west end of Lake Manitoba, in Township 18, in Range 9 west, comprising about 12,000 acres of land, of which by far the largest portion is unfit for

cultivation, but is well adapted for grazing purposes. The members of this Band show a disposition for farming, but owing to the succession of wet seasons for the past three years their efforts have been in vain, as their crops were nearly all drowned out in 1877. They have 24 comfortable log houses and nine stables, and have increased their live stock considerably within the past 18 months, having now 57 head of horses, 15 oxen in their own right and one Government ox, 22 cows, 46 head of young cattle and four pigs all in their own right. This Band will soon require a school as they have 44 children of school age, and I was told when I was paying them their annuity that they were preparing a school house so that they could demand a teacher. I was unable to ascertain the amount of furs they sold during the season, as they sell or trade to private parties for provision and other things; they catch but few fish beyond what they require for their own use. The members of this Band seem quite well satisfied with their Reserve and the manner in which the terms of the treaties are generally carried out, still expecting to receive seed, grain and oxen to enable them to till the soil.

I have the honour to be, Sir,

Your obedient servant,

FRANCIS OGLETREE,

Indian Agent.

No. 40.

MANITOBA SUPERINTENDENCY,

WINNIPEG, 31st December, 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR,—I have the honor to inform you that in accordance with instructions received from the Department of the Interior, dated the 19th of November, 1877, I visited during the last summer nearly all the Indian Bands in the Manitoba Superintendency, with the exception of those under the Agency of Mr. Amos Wright, of Prince Arthur's Landing. During my tour of inspection I travelled a distance of about 3,000 miles, and had ample opportunities of becoming acquainted with the character of the Indians comprising the different Bands that I visited. I was gratified to find that wherever I went there was manifested such a feeling of loyalty and devotion to the Crown, and reverence for the name of Her Majesty, which fully convinced me that nothing short of the most unjust treatment will ever alienate their affections from the land of their birth, and destroy their confidence in those institutions which are the safeguard of every British subject irrespective of creed, race or color; and to such extent is this sentiment indulged in by them, that the waving of the Union Jack not unfrequently marks the spot where the buried Chief lies.

The condition of the Indian in his nomadic state, where he lives in his wigwam and subsists on the fruits of the chase, is much inferior to that of his more provident brother who has profited by the example of the missionary, the trader or the half-breed, and has settled on his Reserve, where he is being gradually inducted into the arts of husbandry, and where his children are having the advantages of education. The superior condition of the one over the other is manifested by the appearance and construction of his comfortable log cabin, neatly thatched with grass, and floored deftly with lumber of his own manufacture, and also by the well cultivated garden patches of wheat, barley, maize, potatoes, turnips, carrots and onions, which surround his cosy dwelling. I am strongly of the opinion, from the importunities of Indians throughout this Superintendency, for cattle, seed grain, farming implements and schools, as well as from their urgent solicitations for farmers to teach them how to cultivate the soil, that under judicious supervision and instruction they would soon develop into successful agriculturists and skilful tradesmen. The establishment of an Industrial School in some central place, where the Indian youth of both sexes could be taught the various industries, so as to enable them to impart the knowledge thus acquired to their less favoured kindred, would, in my judgment, be the most efficient and practical system to adopt for the amelioration of the present dependent condition of the red man, and for enabling him to become self sustaining and independent.

There are comparatively few Government schools in operation in this Superintendency, and I regret to say that the majority of them are of a very inferior grade, on account of the incompetency of many of the teachers in charge. In numerous instances, where no schools have been established, the Chiefs and councillors expressed the desire that their children might be educated, and requested me to ask the Government not only to send them teachers, but also to build them school houses. I attribute the low standard of the schools to the small amount allowed by the Government for the salary of teachers in each Reserve, for only the most inefficient ones can be obtained at such a consideration. I would, therefore, beg leave, to suggest that a larger allowance be granted for that purpose, and that only efficient teachers be engaged.

The general progress of the Indians in agriculture throughout this Superintendency is extremely gratifying. Their appreciation of the necessity of depending more upon the products of the soil and less upon those of the chase is evinced by the eagerness with which they turn the agricultural implements they possess to good account. Numerous instances can be cited where the members of Bands with ploughs and harrows, but without cattle or horses, have actually harnessed themselves and ploughed and harrowed their fields—ingenious use of ropes and portage straps. In other cases they have made train dogs do the work of the ox and the horse rather than make no use of the implements provided. They use the grub hoe very successfully in the absence of more suitable implements in the cultivation of their garden patches, from a fraction to six or seven acres in extent. Excellent crops of wheat and other grain have been raised on some of the Reserves by the use of no other implement. These brief references will serve to indicate that the Indians of the North-West appreciate to a gratifying extent the advantages of looking to the soil for subsistence in the future. The stern "logic of facts" has forced upon them the conviction that dependence upon the products of the chase is becoming every year more uncertain. I have been careful to impress upon the Agents the necessity of using their best efforts to stimulate the Indians to greater perseverance in the direction of agriculture, and I am sanguine as to the future advantages to them and to the Government, if reasonable and proper encouragement be afforded them to cultivate their lands. It is unfortunate that many of the Reserves are not well adapted for agricultural purposes, the land being either marshy or rocky and often both. The expressed desire for a change of limit in such cases upon the part of the Bands is but reasonable and deserving of consideration.

In listening to the complaints of the Chiefs and headmen of the several Bands, I found that considerable dissatisfaction is created by the encroachment of White

settlers upon their Reserves. I would therefore suggest the expediency of surveying, at as early a date as practicable, the locations they had pointed out as reserved. I think also it would be advisable to instruct the Dominion Lands Agent, or the Timber Inspectors in connection with the Lands Department, to protect the Indian Reserves as they protect Dominion and School Lands from illegal timber cuttings.

To say that the Indians are entirely satisfied with the manner in which the terms of the several treaties have been carried out, would be saying what is inconsistent with their character. To complain is a chronic feature of their nature. I am forced however to admit, from personal intercourse with them, and from abundant data at hand, that the manner treaty stipulations have been observed in this Superintendency in the past has given them just ground for complaint. They have been furnished—by no fault of the Government which paid the price of prime supplies and implements—with inferior and old worn out cattle, or cattle too wild for working or dairy purposes, and with supplies of all kinds of the most inferior quality, which would not be accepted at any price by the ordinary consumer.

Their complaints on this head have been very much less during 1877 and 1878 than in former years, and they confidently believe that their complaints have been heard at last. To confirm them in this belief ought to be the watchful care of the Department in future.

The present Acting Superintendent and his staff of Agents are discharging their often delicate and onerous duties with zeal, prudence and integrity, as far as I have been able to observe. I am glad to bear this testimony in their favor, inasmuch as the late Acting Superintendent and some of his late officials transacted the business of the Superintendency in a manner that resulted in financial loss and embarrassment to the Government, dissatisfaction to the Indians, and I may add public scandal. It is not always easy for an Agent, in dealing with Indians in remote districts, to follow the letter of his instructions; but I submit that an Agent is not justifiable, under any circumstances, in creating a Chief and councillors, paying them as such, giving them suits of clothing and purchasing cattle for them without authority, as the late Agent of Treaty No. 5 did; but otherwise I believe that he discharged his duties faithfully and satisfactorily.

A uniform system of keeping books of accounts, &c., at the Indian Office in Winnipeg, and at the several agencies has been initiated, the effect of which is to enable the Department to trace readily the quantities of supplies, &c., shipped and received by the different agents, and also the distributions of the same. The necessity of this is apparent, inasmuch as no vouchers of distributions had been taken prior to 1876, and but very imperfectly in that year, so that in order to obtain a statement of cattle, seed grain, agricultural implements, &c., supplied, since the date of treaties to Indians, I was obliged to visit the different Agents and Bands, and make the most searching enquiries regarding the same. I am confident the information thus obtained is as perfect as could be ascertained under the circumstances.

The question of temperance is one of paramount importance in connection with the successful management of the Indian in this Superintendency. Considering his proverbial weakness for alcoholic stimulants, and the readiness with which he can obtain them from unprincipled and unscrupulous dealers within the Province, I am glad to be able to represent that the Bands I have visited are as free from the vice as the same number of whites in many localities in this Province. With the exception of the Bands about Portage la Prairie, Selkirk, North-West Angle and Rat Portage, where liquor is freely obtained by Indians in defiance of law, I may say intemperance among the Indians is unknown. In some of the localities named the local magistrates during the past year have made earnest efforts to put the machinery of the law in motion against liquor vendors and Indians with the most beneficial results.

The Indians complain that seed grain, potatoes, &c., are received too late in spring for sowing and planting in time to mature. This might be considerably obviated by the purchase of these articles in the neighborhood of many of the Reserves. Thus securing their early delivery, as well as the saving of expensive freightage to distant points.

The only Agencies that were supplied with any office furniture, &c., are those of Mr. Martineau and Dr. Young, each having received an office desk. I consider that each Agency should have an office and a storage room, one desk, two chairs and a stove.

I have the honor to be, Sir,

Your obedient servant,

(Signed) E. McCALL.

— — —
No. 41.

NORTH-WEST SUPERINTENDENCY,
BATTLEFORD, N.W., Territories, 5th Dec. 1878.

The Honorable

The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—The circular from your Department of 14th August last, covering form of tabular statement, was received at this office on the 18th September.

I have delayed replying thereto in the hope that ere this date, I would have received reports of the annuity payments under Treaties Nos. 4 and 7. But I have been disappointed, and am consequently unable to furnish any satisfactory information respecting the number of Indians in this Superintendency who have accepted treaty allowances.

Under Treaty No. 6 some 1,636 were paid this year for the first time, besides any that may have been paid at Bow River, and as all these were entitled to their gratuity and one year's annuity, namely \$17 per head, a much larger sum was required for this Treaty than I anticipated.

Having already reported the proceedings connected with the annuity payments in 1877, I will confine my remarks to other operations within the past financial year. However desirable it may be to report on the operations during the past season, it is impossible in this country, where communication is so unfrequent and irregular, to give a general report for the Superintendency up to a later date than the 30th June.

I deeply regret that in this comparatively unorganized Superintendency, I have as yet been unable to obtain sufficient information to warrant me in attempting to give any statistics respecting the property of the Indians, and the crops raised by them. Besides paying the annuities, the great work at present in this Superintendency is distributing the agricultural implements, cattle and seed promised in the several treaties, and attending to those Indians who call to represent real or imaginary grievances and to seek relief in their distitution. The column for "other distributions" in the form of tabular statement being far too circumscribed to give a satisfactory synopsis of the articles distributed in this Superintendency, I have caused statements to be prepared and placed herewith to which I refer you for details in regard to these articles.

IMPLEMENTS, CATTLE, &C.

Statements (A) and (B) shew the number of agricultural implements, cattle, seed and provisions at seed time distributed to the Indians of Treaties Nos. 4 and 7 during the past financial year. Only 2 ploughs, 2 harrows, 13 spades, 18 axes, 41 hoes, 4 oxen, 1 bull and 1 cow were distributed in Treaty No. 4 in 1877-8. This is partly owing to the fact that a number of implements were distributed in previous years; but it must be admitted that most of the Indians connected with that Treaty are very backward about engaging in agriculture. The quantity of seed that was distributed last spring to the Bands that have settled on their reserves, was 32 bushels of barley, 616½ of potatoes and 4 of oats.

Of all the Chiefs under Treaty No. 4, Côte, of Fort Pelly, appears to have made the greatest progress in agriculture. He has used his seed to good advantage; so also, I believe, has Pesqwa at Qu'Appelle and Gordon at Touchwood Hills.

Statement (C) shews that there was distributed to the Indians of Treaty No. 6, during the past financial year, 28 ploughs, 25 harrows, 147 scythes and 149 snaths, 149 hay forks, 316 axes, 339 hoes, 148 spades, 178 saws, 13 grindstones, 14 crosscut saws, 12 pit saws, 18 tool chests, 75 handsaws, 18 sets harness, 20 horses, 17 wagons, 94 augurs, 50 oxen, 7 carts and 11 sets cart harness. This distribution may appear large, but it must be remembered that it was the first under the Treaty. The same statement also shews that the seed grain distributed last spring was, 287 bushels wheat, 658½ bushels bailey, 1,164 bushels potatoes and 1 of oats.

You will observe that the larger quantity of this seed was given to 14 or 15 Bands. Of these, Chief Seenum's Band at White Fish Lake, John Smith's at the South Saskatchewan, James Smith's at Fort Lacorne, Ahtahacoop's and Mistamisis near Carlton, Red Pheasants at Eagle Hills, and Little Hunter's at Victoria, I believe made a good use of their seed. Most of the others, from want of provisions and some one to instruct them, I fear, did not get as much land broken up as they expected, and consequently did not appropriate all the seed to the purpose for which it was intended. Were it possible to employ a few good practical men to aid and instruct the Indians at seed time, I am of opinion that most of the Bands on the Saskatchewan would soon be able to raise sufficient crops to meet their most pressing wants.

DESTITUTE INDIANS.

Statement (D) shews approximately the quantity of provisions distributed at different posts to destitute Indians. Towards the spring a number in several of the Bands on the Saskatchewan became very short of food, and had to be supplied to a small extent.

About forty delegations on one pretence or another visited this office during the winter, and as they all arrived completely out of provisions, they had to be supplied and induced to leave as soon and as quietly as possible. Over fifteen chiefs, some of them coming from as far west as Lac la Biche, White Fish Lake and Victoria, paid their respects to the Superintendent since his arrival here, and during March, April and May, he had calls almost daily from individual Indians. Though these visits have entailed a little expense on the Government, yet I trust the results will be beneficial, as it has afforded an opportunity to explain the provisions of the Treaty, and possibly thereby to remove some causes of dissatisfaction.

SCHOOLS.

Only a few schools in this Superintendency as yet received aid from the Government. All of these are Mission schools. The schools connected with the Roman Catholic Mission at St. Albert, Lac la Biche and Isle à la Crosse Reserve receive aid for the Indian children instructed there. I have not been able to visit any of these institutions, but I hear them highly spoken of. The Church of England mission school at Touchwood Hills, near Chief Gordon's Reserve, also received aid, and an application has been made on behalf of a similar school at Asissippi on Ahtahacoop's Reserve, near Carlton, and of one at Eagle Hills Reserve, near Battleford, which I trust will receive favorable consideration. The Canadian Methodists have also some good Indian schools, but if they are now in receipt of Government aid it is not forwarded through this office.

THE SIOUX.

Early last winter the Sioux Chiefs at Qu'Appelle, namely White Cap and Standing Buffalo, applied that agricultural implements and seed might be given to them in

the following spring. You will see by Statements (A) and (B) that 3 ploughs, 2 harrows, 12 spades, and a number of hoes and axes were supplied them, as also 62 bushels of seed potatoes. Not having any oxen to work their ploughs, and having had a dispute about their reserve, both Chiefs desiring to have the same locality, I hear that they did very little planting. During the early summer both these Chiefs visited me at different times and complained that Qu'Appelle was not a suitable place to have their Reserve; and asked to be allowed to settle on the South Saskatchewan. I communicated this desire to the Department. White Cap passed most of the summer and autumn in the neighbourhood of Duck Lake; and he and his Band, as well as some other Sioux, are wintering at Prince Albert.

A deputation of seven Sioux, from the Bands which have recently crossed the boundary from the United States, visited me early in July. They appeared to be influential men, but were very reticent about themselves, and also about Sitting Bull, and would scarcely acknowledge that they knew him. They expressed a wish that traders might be allowed to go amongst them, and professed to be sincerely desirous of living at peace with the Queen's subjects.

I have the honor to be, Sir,

Your obedient servant,

DAVID LAIRD,

*Lieutenant Governor and Indian Superintendent
of the North-West Territories.*

The numbers given as having been forwarded from Winnipeg by Mr. Nixon do not correspond with were delivered at Fort Pitt. At the latter place also there seems to be a deficiency in the number of

The ploughs were sent with "whipple-trees, &c., complete," and, in some cases the H.E.Co. Officers gave the full complement.

No. 42.

EXTRACT of a *Letter dated 11th November, 1878, from His Honour Lieut.-Governor and Indian Superintendent.*

BATTLEFORD, N.W.T., 11th November, 1878.

3. To your general questions I may give an approximate answer. In Treaty No. 4 about twenty Bands have selected their Reserves; in Treaty No. 6, about twenty-four Bands; in Treaty No. 7, the Reserves are located by the terms of the Treaty. Some ten of the selections in Treaty No. 6 have not yet been approved by the Agents of the Government. The number of Bands that are settling upon their Reserves and adopting agricultural pursuits, are, for Treaty No. 4, thirteen; Treaty No. 6, about 22; Treaty No. 7, three Bands. A majority of the Bands have, I believe, made a tolerably fair use of the agricultural implements and cattle given them; and, with two or three exceptions, have taken good care of both the cattle and implements.

4. In regard to your enquiries respecting the method of teaching the Indians farming, I am decidedly of opinion that the best plan is to have a permanent agricultural instructor with the Bands. Where Reserves are grouped together, one instructor might take charge of say three or four Bands. The number which would be necessary might be, for Treaty No. 4, five instructors; for Treaty No. 6, eight; Treaty No. 7, two. Each instructor, for salary and perquisites, would cost at least \$1,000 or \$1,500 in all per annum, for say ten years. If such instructors were appointed, I would advise dispensing with ordinary Indian sub-Agents. Agents to go round and make the annual payments, and oversee the instructors to some extent, would still be required, as, in my opinion, it is injudicious to let money get into many hands. If the Indians were instructed in farming, I think most of the Bands would soon save their seed from their own crops. But, for a few years it would be of little avail to give them instructions, unless they were allowed seed and provisions for two or three weeks while planting. In the spring they are generally absolutely destitute of food, and can do but little at farming unless provisions are supplied to them.

5. Respecting the area each Band is cultivating, and the quantity of produce they have succeeded in raising, it is impossible for me to give you the information you desire. Only one Reserve is near this place; that one I have visited, and another at Duck Lake. Red Pheasant's Band, which have chosen their Reserve at Eagle Hills, about fifteen miles from Battleford, commenced farming only last spring. For plain hunters they made a fair beginning, and had about twenty acres under crop. Their return may be estimated at 200 bushels of potatoes and 75 bushels of grain. They, however, had the advice and example of a zealous young missionary of the Church Mission Society, namely, Rev. Mr. Clarke, who went to the Reserve with them, and cultivated a garden which was a credit to him, and has now established a school on the Reserve, for which he is about to apply to the Government for support. The other Band which I visited—"Beardy's," at Duck Lake—had put in very little crop, and as the soil there is generally light, the yield would be trifling. The Bands north-west of Carlton had about the following areas under crop: "Ahtahacrops," 40 acres; "Mistawasis," 20, and "Keetoowoyhow's," 10. John Smith's Band, on the South Saskatchewan, had about 120 acres under cultivation. The Band at White Fish Lake had a considerable area under crop, probably 200 acres; but the season being dry in that locality, the yield was light. I fear they will have no produce to dispose of next spring. The same, I fear, may be said of every other Band in the Territories.

6. You enquire respecting the influence of the missionaries who have established themselves among the Indians. It is difficult for me to give any definite information under this head. Quite a number of Crees have been taught by the Missionaries to read and write syllabic characters. This method of writing is useful

in enabling them to correspond with each other in their own language and with the missionaries; but as there are very few books printed in Cree or syllabic characters, they can gain very little general information by a knowledge of these characters. Some of the missionaries have undoubtedly contributed to the moral improvement of the Indians among whom they labour, and in most cases where Bands have settled on agricultural lands, and have become in some measure industrious, they have been under missionary influence.

7. You ask whether it is desirable to perpetuate the authority of the Chiefs and headmen, and whether when a Band has once been located upon a reservation the Reserve should be divided into lots, giving to each Indian his individual property? I may say I have serious doubts as to the wisdom of the Canadian policy in perpetuating the tribal system among the Indians, and likewise as to the practice of granting reservations in large blocks of land. The great aim of the Government should be to give each Indian his individual property as soon as possible.

In most Bands there is a large proportion of indolent and thriftless members, who may be said to pray upon their more industrious and provident neighbors to the great discouragement of the latter. The Indian who makes a laudable effort to provide for the support of his family, seeing that his stores often have to go to feed his starving brethren, then loses heart himself, and drops down to the level of the precarious hand-to-mouth system of the Band generally. I am of opinion that instead of large Reserves, each Indian head of a family should receive non-transferable script, or the right to locate on a certain quantity of land in any tract open for settlement. They would thus be able to settle down in two's and threes by the side of fishing lakes, or amid some settlement of Whites where they could get work, and also enjoy the fruits of their industry on their own holdings. The municipal system on Reserves, in my opinion, would not work in the Territories for many years to come. They are not sufficiently intelligent to manage such institutions; but if settled hither and thither among the other population of the country, they might, with the aid of their neighbours' example and experience, be able in a generation or two to rise to the full stature of perfect politicians.

No 43.

NORTH WEST TERRITORIES, TREATY NO. 4,

SWAN RIVER BARRACKS, 24th Nov., 1878.

The Honorable

The Superintendent-General of Indian Affairs,

Ottawa.

SIR,—In compliance with instructions received in printed circular, dated August 14th, 1878, requesting me to fill up a tabular statement, I have the honor to state that I did not receive it until my return from completing the payments of annuities, viz., 14th October, and therefore was unable to forward my report so as to reach Ottawa before the 30th of September.

I have seen several of the Chiefs since, but I regret to say they were unable to give me the information asked them, so it is impossible for me to fill up the tabular statement.

I have never been furnished with returns from the Department of the Indian Reserves surveyed. I am therefore unable to give the quantity of acres included in each Reserve.

Of the twenty-four Bands in this Treaty, eleven are gradually turning their attention to farming, ten of which have their Reserves surveyed.

During the spring, I distributed 678½ bushels of potatoes, 32 of barley, and a small quantity of turnip, carrot and onion seeds, most of which was sown.

Chief Côté, of Fort Pelly, is the most advanced, having harvested this year 280 bushels of barley, a little over 3,000 bushels of potatoes, and a large quantity of other vegetables, all of very good quality. The increase from the four cows he received two years since is 11 head; this may appear large, but such is the fact.

Kushe-kouse and the Key, who have their Reserves on the west side of Swan River, have done considerable work during the year. The latter moved to his Reserve in the spring, and has already built his dwelling, storehouse and stables. A few of his followers have broken up land, and are fully determined on making the Reserve their home.

These three Bands are very desirous of having missions and schools established. Côtés' and the Keys' have embraced the Protestant faith, the other the Roman Catholic.

The Duck Bay Band, which is part of Kishekouse's, have a Reserve only suited for a fishery; they however raised 1,000 bushels of potatoes this year.

The Fort Ellice Bands, viz, Way-way-see-cappo and White Bear have their Reserves, the former on Bird Tail Creek, the other at the Moose Mountain. They planted a few bushels of potatoes this year.

At Touchwood Hills are Gordon's, Day Star's and Cawacatoose Reserves. The former Band has had the advantages of a mission and school for some years, sustained by the Church Missionary Society. On my last visit to the mission I was informed the teacher is now paid by the Dominion Government.

I am unable to state the quantity of potatoes raised by this Band this year; it must be considerable, as I supplied them with 80 bushels of seed, and I was informed that the prospect of the crop was very good.

Day Star and Cawacatoose have made a commencement, but I regret to say under very great difficulties, as there are no Indians in either of these Bands who understand the use of ploughs or the management of oxen.

Cawacatoose last winter, through want, killed an ox, a bull, a cow and two calves, which had been supplied to the Band according to the terms of the Treaty.

Yellow Quill's Band is the one alluded to who has commenced tilling the soil, but their Reserve has not yet been surveyed. They intend taking it at or near Nut Lake.

At Qu'Appelle, Chief Pasquah and 30 families have begun work. Through the neglect of putting up proper fences their crop this year was destroyed.

I have the honor to be, Sir,

Your obedient servant,

ALLAN MACDONALD,

Indian Agent.

No. 44.

No Report from M. G. DICKIESON, Agent for Treaty No. 6.

No. 45.

EXTRACT of Letter from Lieut.-Col. MacLeod, Commissioner North-West Mounted Police.

Messrs. J. G. Baker & Co, furnished the supplies contracted for at the different places of payment according to their contract, and I gave them a receipt for the same. The rations were divided in proportion to the number present at each place and delivered to the Indians in two issues.

At Fort Kipp a council of the "Blood" Tribe was held, at which one Head Chief and two minor Chiefs in the place of "Rainy Chie" "Weazle Bull" and "Heavily

Whipped," who had died since the making of the Treaty, were elected. I enclose a statement of the proceedings. At both this payment, and that of the North Peigans, everything passed off in the most satisfactory manner, and all expressed their contentment at the manner in which the terms of the Treaty were being carried out.

At the Blackfoot Crossing things were at first different, the Indians expressing their dissatisfaction at only receiving \$5 per head this year, instead of \$12 as they did last year. I had a long talk with "Crow Foot" the head Chief and his Band the morning after my arrival; enclosed I send a copy of the proceedings.

It is very evident to my mind that they were instigated to express their discontent by interested persons who had been visiting them, and who should have known better; however, when they found that I had come there to carry out the terms of the Treaty, and not to alter the old one, or make a new one, they all came forward and received what the Government had promised them by the Treaty of last year. Several of the Chiefs came and apologized for what "Crow Foot" had said on the first day of our meeting, and they all sent a message to say that they were perfectly satisfied with everything. The evening before I left I paid a visit to the Head Chiefs, and I was very much gratified to hear them express the contentment which prevailed throughout the camp. Early in the morning, as I was leaving the camp "Crow Foot" and several other Chiefs came to say "good-bye." "Crow Foot" taking me by the hand said, "We have come to shake hands with our old friend, and hope he will forget the words I spoke the other day."

I entrusted Sub-Inspector Denny with the payment of the Stony Indians, and enclose his report from which it will be seen that the duty was most satisfactorily performed.

I have enclosed the memorandum of the Rev. Mr. McDougall, with reference to the farming implements, &c., to His Honor the Lieutenant Governor.

The cattle did not arrive in time to be distributed at the different payments, and perhaps it is as well that they did not, as all the different tribes of Blackfeet show a decided disinclination to receive them at present, fearing that on account of their wandering habits they would not be able to take care of them. I do not think they are as yet ready to undertake their charge, and it would be very unfortunate if such a valuable herd of cattle should be lost to them. I continually try to impress upon them that their true interest lay in their undertaking the herding of them at as early a date as possible; but they begged of me to make any arrangement I could to have them taken care of at any rate till next spring. I determined, both in the interest of the Government and the Indians, it was better to do so. Mr. Conrad, of the firm of J. G. Baker & Co., offered to herd them till next summer for this year's increase and next, a proposition which I of course at once rejected. He then offered for the calves at present in the Band, but this proposition I also rejected, as there are some 400 calves in the Band.

I therefore determined to hire men to herd them, and have engaged four good men at \$250 a month to do the work.

The herd has been taken to one of the best pasturages at the foot of the Porcupine Hills, in the North-West, where the men in charge will put up hay and erect sheds for any weak cattle or calves requiring them. In order to get these men to do the work for the amount above stated, I was obliged to promise them rations on re-payment out of the Police stores.

The men employed will be under the supervision and control of Sub-Inspector Shurtliff, who is well acquainted with the management of stock.

A credit to meet the above expenditure, with the firm of J. G. Baker & Co., in favor of Inspector W. Winder, commanding at Fort MacLeod, will be required.

I sincerely trust that the arrangements which I have made will meet with your approval. The care of these cattle has caused me a great deal of anxiety, and I feel confident that I have made the best arrangements possible for all parties concerned. I had them inspected by Mr. Shurtliff, who reported very favorably upon them; and, riding through them myself, I found them much more quiet than I expected they would be, and was much pleased with the appearance of the majority of them.

As will be seen by the enclosed books, Inspector Winder, with Constables Storman and Stone, carried out the work of payment, and Inspector Crozier, with constable Calvin, attended to the issuing operations and other supplies. They all performed their duties in a most satisfactory manner.

I have the honor to be, Sir,

Your obedient servant,

JAMES F. MACLEOD,

Commissioner N. W. M. P

No. 46.

BRITISH COLUMBIA.

INDIAN OFFICE, VICTORIA,

20th, October 1878.

The Honorable

The Superintendent-General of Indian Affairs.

Ottawa.

SIR,—I have the honor to submit the following Report of Indian affairs in the Victoria Superintendency for the year ended 30th June, 1878.

I have visited the various Tribes within the reach of the ordinary means of communication as occasion required, but no distant official visitations have been made during the past year.

I regret that I am therefore unable, at present, to add anything of interest to the reports already furnished you in respect to the comparatively large native population of this Superintendency.

It is, however, exceedingly satisfactory to state, for your information, contentment and apparent good feeling prevail among the Indians, and with few exceptions reciprocal harmonious relations exist between them and their white fellow-citizens.

There are some instances of dispute and consequent dissatisfaction between North-West Coast Indians and the Whites engaged in canning and salting fish, in regard to alleged fishery encroachments, which I greatly trust will be disposed of and settled during the ensuing year.

Coast Indians attach as much value and importance to their customary fishing grounds as interior Tribes do to their grazing and agricultural lands, and look with much jealousy upon the approach of white settlers to these places so necessary to their prosperity and existence.

On the Northern coast there are certain salmon streams to which for ages their rights have never been questioned, and I have no doubt that extreme care will have to be taken in considering their claims and adjusting their differences if a friendly feeling is to be perpetuated.

I do not think the difficulties of arranging these matters are by any means insuperable, but I feel quite certain that the hereditary rights to which they are so devotedly attached ought not to be longer left in abeyance.

Our Coast Indians do not lack in intelligence, shrewdness or industry; naturally they are well and peaceably disposed, and will give a favourable consideration to any proposition which is based upon fairness and justice. No officer of the Government, supposed to act for and with them, has so far visited their portion of the Province; and it is scarcely to be wondered at that the supposed encroachments of those whom they instinctively regard with suspicion should be attended with their opposition and distrust.

In the early history of the Colony, little attention was paid to them by the Government; and so long as they were not guilty of some flagrant infraction of the law, they were allowed free exercise and liberty in the habits and customs peculiar to their race.

The annual visit of one of Her Majesty's ships of war promoted obedience and respect, gave prestige to the Queen's law, and secured safety and protection to the new settlers and traders who ventured in their midst.

The extraordinary impetus, however, which, within the last two years, has been given to the canning and salting of fish, has attracted a large number of eager people to their choice fishing grounds, and in some instances excited their fears and grave apprehensions.

The late fishery regulations would, if enforced among our Indians, cause much distress, and be carried out with great difficulty and expense.

On the other hand, however, the Coast Indians generally appreciate the efforts of the Government to prevent the exhaustion of salmon streams, and will be easily persuaded to join in the adoption of some precautionary measures for the preservation of their favourite and necessary staple of life.

The north-west coast of British Columbia is rocky in character, densely wooded, and presents great difficulties to agricultural pursuits; hence, the natives are well aware of the future value and importance of locations, the possession of which, in former times, was often a source of war and bloodshed among themselves.

Once they are certain that their rights will be respected, none will be more amenable to the requirements of the Fishery Department, or more respectful of its necessary regulations.

Again, the Indians so far, have the greatest confidence in the most friendly feeling for, and the highest appreciation of the protecting and paternal care of the Dominion Government; and there exists little difficulty in securing their active co-operation and assistance in carrying out any object for their own and the general good.

SCHOOLS.

There are five schools in the Province which have participated in the Government grant, viz: Metlakahla, Massett (Anglican), Fort Simpson, Mass, and Kitlahmacks (Wesleyan.)

The Roman Catholics have several Indian missionaries in the District, but no applications have been made to me for school grants.

I regret that I have not had an opportunity of visiting any of the Mission Posts on the north-west Coast, and reporting to you the results of a personal inspection.

Although thoroughly aware of the earnest and untiring efforts of Missionaries in the general work of civilizing the Indians, there are so many obstacles to the success of ordinary day schools, that the real results appear to my mind very doubtful.

Your late instructions authorizing per capita payments of the grant, instead of limiting them to those schools showing an average attendance of thirty, have enabled two or three schools to open in addition to those on the list last year, and I have been informed of others which will probably apply for the grant under the new regulations during the coming season.

The short hours, however, irregular attendance, and the greater, though opposing attractions of camp life, prevent, in my opinion, the realization of much material benefit to either children or parents from the present system of day schools.

Among the schools worthy of special remark, I may refer particularly to that at Metlakahla, which being of an industrial character, has been attended with the most gratifying and satisfactory results.

There is a prolific field in the Province, inhabited as it is by such a large Indian population, for the establishment of other schools upon the plan of that at Metlakahla, and as to the real and permanent good which would thus be conferred upon neighboring and distant Tribes there cannot be a doubt.

I am not aware of the annual cost to the Church Missionary Society of the Metlakahla School, but the grant allowed by the Government is small compared with its effective worth as a most valuable civilizing and christianizing centre.

M^r. Duncan's, plan in the first place, of isolating the Indians, founding a sort of municipal government among themselves, and then, being empowered to prevent contamination with evil disposed Whites was, I think, more the result of good judgment than pecuniary expenditure.

He has been in a position ever since to teach them with much success, the various industries without hindrance or interruption, and a co-operative establish-

ment has enabled him to make, as compared with other Industrial Schools, an expensive institution well worthy of example in other parts of the Province quite as favorably situated for the purpose as Metlakahtla.

During the past year the following schools have received Government aid, in accordance with the instructions regulating the same.

Metlakahtla,	Anglican.....	\$ 350
Masset,	do	75
Fort Simpson,	Wesleyan.....	300
Nass,	do	225
Kitlatahmacks,	do	150

Total..... 1,100

Additional amounts have been authorized these schools to close their grants for the year ending 30th June, but as the School Returns had not reached me up to the date of this Report, the sums to make up the full allowance for the year referred to have not been paid.

I have been informed that the schools at Comox and Quamichan will be re-opened, and application has already been made for a renewal of the grant for the Kincolth School.

Quarterly Reports of those named above as having received Government aid have been forwarded to you from time to time in accordance with your instructions.

MEDICAL ATTENDANCE AND MEDICINES.

Owing to the prevalence of phthisis, syphilis, and all kinds of strumous diseases among the Indians of Vancouver and the Coast, professional advice and medicines are always in urgent request.

Medicines have been furnished to the Missions at Metlakahtla, Fort Simpson, Nass, Barclay Sound, Hesquiaht, Comox Fort Rupert, Massett and Nanaimo; and the missionaries at these posts are deserving of especial commendation for the earnest efforts made by them in dispensing medical comforts to the large number constantly asking for relief.

Many sick Indians now come from various parts of the Suprintendency to Victoria, and the urgent need of hospital accommodation is daily experienced. No better or more humane appropriation could be made for them, nor one that would be more generally felt and appreciated.

Medicines are freely prescribed and given to both Reserve and other Indians here, and any cases of real destitution brought to my notice have been promptly relieved by proper food and clothing.

The houses however erected in the City for rental to Indians are mere shanties, wretched and unhealthy from the fact that a large number of them are put up within a limited space, and so badly and cheaply constructed that little or no protection from the elements is afforded the miserable occupants.

If some steps were taken by the City authorities to prevent the residence of all Indians who come regularly to sojourn in the place for immoral purposes, much of the misery now entailed upon a large class of them would be averted, the sanitary condition of the City greatly improved, and a real and humane service would be rendered to the natives particularly.

Quite a large number of Indian traders, who now drive a profitable trade from the present arrangements, would be at once affected by such reform, and their influence so far has been sufficient to prevent the desired movement.

The subject however is one, in respect to which practical action will have to be taken sooner or later, and a very prolific cause of much sickness and distress among the unfortunate Indians will then have been removed.

The (almost) usual visitation of small-pox, I am glad to state, the Indians have escaped this year, and the steps taken to provide general and regular vaccination from time to time will, I trust, be effective in securing some comparative safety from this fatal scourge hereafter.

PRESENTS.

Owing to the unsettled condition of Indian Reserves, and pending the allotment of lands by the Reserve Commissioner, presents of agricultural and garden implements have purposely been limited.

Innumerable applications for (potlaches) assistance have been almost of daily occurrence.

My disbursements, however, as will be seen by the vouchers, for expenditure, from time to time forwarded to you, have been mostly confined to relief to the very poor and destitute.

Indeed a considerable experience now confirms my previous conviction that presents not only beget a desire for future gifts, but encourages an unmanly dependence among a large class of Her Majesty's subjects who are generally quite able to support themselves.

Implements and seeds to the value of \$421.66 have been presented by me during the year to those Tribes giving me proof of the urgent need of assistance and unmistakable evidence of their ability and intention to utilize them.

Difficulty in obtaining tools, etc., have made these gifts much more appreciated, and secured increased care in their preservation and use.

ILLICIT LIQUOR TRAFFIC.

A wholesome, and I trust a permanent check has been given to the Indian whiskey traffic throughout the Superintendency, by the operation of the Federal Liquor Act.

Drunkenness, if not rare among the natives, is certainly very much curtailed, and improvement among the Coast Tribes is especially remarked.

In Victoria the disreputable whiskey trade is not by any means a lucrative one, and I think the very stringent enactments of the law have been honestly enforced wherever practicable by the local authorities.

Some two years ago I had the honor of calling your attention to the manufacture of spirits in the most primitive manner by the northern Indians, in American Territory, and to the fact that their knowledge had been communicated to the natives of Queen Charlotte's Island and neighboring Tribes. Since that period urgent complaints have been made to me that considerable quantities of Indian liquor are now being manufactured and bartered among coast Indians in the locality alluded to. No doubt an occasional cruise of the Government steamer would soon put a stop to it, and I greatly trust some steps may be taken either in connection with the Inland Revenue Department, or otherwise, which will have this desired effect.

FISH, FURS, ETC.

I may be permitted to remark, in respect to the tabular statement, that it would seem admirably framed to supply definite information relative to the agricultural and industrial statistics of a Band, over which a local agent can ascertain with facility, and give annually, the particulars required.

It might be noted, however, in regard to the Superintendency in British Columbia, that there are at least 10,000 Indians, composing 100 Bands or more, whom no officer of the Department has ever yet visited; and any attempt therefore to fill up the various columns giving actual statistics of their wealth and important industries, could only be, at the present time, the result of mere conjecture, and quite unreliable as a guide to accurate data.

As previously stated, the Coast Indians never have paid much attention to agriculture, and the items referring to this important branch of labor, even if attainable, would do them injustice.

The sea, however, affords them far more profit with much less effort, while their extreme fondness for the chase, and the consequent collection of furs, adds materially to the wealth and income of the country.

The census of the Indians visited by the Land Commission is absolutely correct, and that given by me of other Tribes, compiled from the best sources of information at my disposal, may be taken as approximately so.

The following table of exports will give some idea of the industries of the Indians, as the last three items are wholly their production.

Salmon, canned.....	\$393,380 00
do salted.....	22,802 00
Herrings, do	2,064 00
Furs.....	204,445 00
Fish Oil	5,594 00
Cranberries.....	462 00
	<hr/>
	\$628,747 00

I have the honor to be, Sir,
Your obedient servant,
J. W. POWELL,
Indian Superintendent.

— — —
No. 47.

BRITISH COLUMBIA.
FRASER SUPERINTENDENCY,
NEW WESTMINSTER, 10th September, 1878.

The Honorable
The Superintendent-General of Indian Affairs,
Ottawa.

SIR,—I have the honor to submit this my Annual Report for the year ending 30th June, 1878.

Since the date of my last Annual Report, I addressd circulars containing a series of questions to the principal employers of Indian labor, merchants, and leading men throughout the Superintendency, who have kindly furnished information, showing the various occupations, earnings, and resources of the Indians of this portion of the Province.

Their aggregate income during the year from all sources amount to the sum of (\$154,162) one hundred and fifty four thousand one hundred and sixty-two dollars, exclusive of the grain and other crops which they raise, and the fish which they catch for their own use. Of the above sum they earned as fishermen and at other work in connection with the various salmon canning establishments on the Fraser River during the fishing season (a period of about three months)

The sum of	\$65,862
In the saw mills and lumber shanties, loading ships and as deck hands on steamers.....	38,000
Amount of furs sold to traders	25,000
As farm labourers	15,000
Cordwood, cut and sold.....	5,000
Cattle and produce.....	3,000
Fish oil.....	1,500
Cranberries	800

\$154,162

Nearly all of which sum they expended in the purchase of clothing, provisions, and other necessaries; they hoard very little.

The majority of the Tribes cultivate more or less land; some of those in the interior raise considerable crops of grain, and own large numbers of horses and cattle, many of them make some improvements in their dwellings and upon their farms every year, and if they would remain steadily at work upon their own places they would become quite comfortable in a few years.

At the present time there are nearly (800) eight hundred of all ages and sexes employed in connection with the salmon fisheries of this place. Men are paid \$1.50 to \$2.00 per day; women \$1.00; boys 50 to 75c.

Those working on farms and in some of the saw mills get their board in addition to the above wages. Their employers speak well of them, and treat them with kindness and consideration.

Annexed hereto are tabular statements in duplicate marked A, showing the distribution made of agricultural implements, carpenters and other tools, during the year to 32 bands and Tribes throughout the Superintendency.

Tabular statements marked B, of garden and field seeds distributed to all the Indians of the Superintendency numbering upwards of 120 Bands. Tabular statements marked C, exhibiting the distribution made of supplies, provisions and clothing chiefly to the aged, indigent and infirm. And statements marked D, of the different classes of diseases treated within the New Westminster and Yale Districts, and many from outside of the limits of those Districts including the medicines supplied to the various Missionaries, and others for the use of the Indians. The statements show the expenditure under each head.

Renewed uneasiness and anxiety was created amongst the Indians during last winter in consequence of the speech of His Honor the Lieutenant Governor at the opening of the Legislative Assembly, in saying that the Land Commission was about to be dissolved. The Chiefs and head men of the Lower Fraser visited the office in large numbers, and remained here two or three days, until I convinced them that the new arrangement made for the settlement of their Reserves would be quite as satisfactory to them as the old one.

Their visit upon that occasion caused some unexpected expense, having made them some presents of agricultural implements, &c., as already mentioned in a former report.

No addition has been made during the year to the number of schools for the education of Indian children, and there is only a very small increase in the attendance at the one in existence. At this place there are at the present time upwards of sixty children of school age with no provisions for their education.

Annexed hereto is also a statement of the number of Indian cases tried by the Local Justices of the Peace at this place for drunkenness and other crimes.

The large number frequenting this City and Burrard Inlet, which is in our immediate vicinity, and the excessively large number of houses licensed to sell liquors contribute largely to swell the criminal docket.

The white population of New Westminster City is not over one thousand, and there are now ten (10) wholesale and retail liquor establishments, with about 1,500 Chinamen and about 1,000 Indians, and only two policemen, it cannot be expected to be otherwise. The Chinese as a class, drink very little, but some of them sell and distribute liquor amongst the Indians. The Half-breeds do most in this way, and unfortunately there is much drunkenness.

Similar complaints have reached me from other sections. The Indian law is a good one, but the power to enforce it is quite inadequate. Yet, notwithstanding the above drawbacks, peace and good order prevail, and happily but very few capital crimes have been committed.

There is a perceptible improvement in the habits and mode of living of the great majority of the Indians.

This year the crops have been good, and the catch of fish large.

Not having visited any of the Reservations this season, I am unable to return the tabular statement received from the Department, and when it is remembered that it would be impossible to visit all the villages of the Superintendency in less than three years, it will be readily perceived that any statement which I may give for the year would be incomplete.

I have the honor to be, Sir,

Your obedient servant,

JAMES LENIHAN,
Indian Superintendent

PART II.

OF

REPORT OF DEPARTMENT OF INTERIOR.

DEPARTMENT OF THE INTERIOR,
DOMINION LANDS OFFICE,
OTTAWA, 31st December, 1878.

To the Right Honorable
SIR JOHN A. MACDONALD, K.C.B.,
Minister of the Interior.

SIR,—I have the honor to submit the following Report upon the work of this Branch of your Department during the twelve months ending the 31st October last, also, where the information might be useful or of interest, on the operations of its outside service, to the close of the calendar year.

I.—DOMINION LANDS.

The returns of the Central Office in Winnipeg, and its local branches in other parts of Manitoba, show a marked increase in the rate of settlement and purchase of these lands.

This is no doubt largely due to the bountiful harvest of the preceding year, also to the continuous absence of what had for a time been the plague of the country and the deterring phantom of the would-be immigrant, the devastating swarm of grasshoppers; lastly and principally to the near prospect of the now consummated connection, by railway, of Manitoba with the rest of the civilized parts of this continent, and with the sea.

The land entries made by Mr. Donald Codd and his sub agents, were, for the year, to 31st October, as follows :—

	ENTRIES.	ACRES.
Homesteads.....	1,753	280,022
Pre-emption.....	1,588	251,192
Forest Tree Culture.....	35	5,598
Sales.....	605	132,345
Military bounty warrants.....	84	13,434
Totals.....	4,065	682,591

The comparative statement for the past four years will stand thus :—

	ENTRIES.	ACRES.
1875	1,021	163,277
1876	807	153,535
1877	2,283	400,423
1878	4,065	682,591

The receipts since the last Annual Report are as follows :—

Homestead fees.....	\$ 17,320 00
Tree culture entries.....	340 00
Sales for cash.....	4,384 88
Sales for scrip.....	127,797 74
Military Bounty and North-West Mounted Police Warrants.....	13,433 60
Total	\$163,276 22

HALF-BREED GRANT.

During the year Mr. Codd has investigated and reported on the land claims of 133 Half-breed children, on the scrip claims of 175 Half-Breed heads of families, and on those of 34 Original White Settlers.

He has also transmitted Allotment Returns of the Half-breed children's lands for the Parishes of St. Agathe and St. Charles.

The Parishes for which allotments are still remaining to be made, are :

St. Boniface.
St. Norbert.
St. Vital.
St. François Xavier.
Baie St. Paul.

SCRIP

was issued to the following extent: To Half-breed heads of families and their heirs, 138 claims, equal in all to \$22,080.

In commutation of Hay and Common right, 158 claims, equal to \$25,718.16. To Original White Settlers, 79 claims, equal to \$14,740.

PATENTS

have been issued as follows:--

Half-Breed allotment.....	1,079
Sales.....	614
Homesteads.....	157
Military bounty grants.....	101
Right of Common, or Hay Privilege.....	141
Under Manitoba Act and 38 Vic., cap. 52	261
Wood lots.....	4

Total number of Patents issued..... 2,357

CORRESPONDENCE.

The correspondence of the Branch, for the year, is as follows:—

	RECEIVED.	SENT.
Head Office.....	4,642	6,009
Dominion Lands Office, Winnipeg.....	3,388	3,619
Totals.....	8,030	9,628
	RECEIVED.	SENT.
Corresponding totals for 1877.....	6,189	7,640
Increase.....	1,841	1,988

The letters, reports, &c., of the Head Office, during the past twelve months, comprise 7,995 folios.

The usual reports from the Agent of Dominion Lands at Winnipeg, and from the Inspector of Surveys, with their respective accompanying schedules, are hereto appended.

II.—ORDNANCE AND ADMIRALTY LANDS.

The transactions connected with these lands formerly occupied a separate Branch of your Department, but, owing to its being lately merged in that of Dominion Lands, it becomes my duty to include them in the Report upon the latter for the current year.

It has been, hitherto, the practice, in annual Reports, to bring the amount of their business down to the close of the fiscal year, the 30th June.

The advantages of continuing so to do are obvious, and are of greater weight than that of the mere uniformity which would be gained by changing to the later date fixed, for special and strong reasons, for the rest of the Branch.

The appended schedules, prepared and signed by Mr. William Mills, the accountant, are similar to those previously annually given. They consist of:—

C. A statement of sales during the year, amounting to \$9,683.29.

D. Showing the receipts from Ordnance lands for the year, arranged according to the locality in which they are situated, the total amount being \$46,255.62.

E. Is the same as the preceding but in more detail, and arranged in the form of an abstract of monthly returns or cash accounts, dividing the receipts into the three classes of Principal, Rent or Interest and Fees, and indicating in what branch of the Bank of Montreal the moneys were deposited.

F. Is a statement of indebtedness of purchasers or lessees of Ordnance lands, arranged according to locality, and indicating amounts overdue remaining unpaid, and those not yet fallen due, but to be paid to complete purchases. The former being classified according to their nature, as capital instalments, or as interests and rents. The totals would stand thus:—

Payments in arrear.....	\$86,915 55
Payments not yet due.....	123,942 71

Total indebtedness of purchasers or lessees.... \$210,858 26

G. A statement of the number of open accounts connected with Ordnance properties, arranged according to the locality of these.

The correspondence for the year includes:—

Letters received	600
Letters sent.....	800
Patents issued.....	92
Assignments registered.....	81

Total 1,573

On the exhibit given by the foregoing schedules, I would remark that, compared with that of the previous year, there is a great decrease of annual revenue, but it is not to be attributed altogether to the only apparently corresponding increase in the amount of arrears. Extensive new sales were made in 1877, on account of which considerable payments in cash were received, whilst the sales in 1878 were but few in number and small in amount.

The principal lands remaining that may be sold are, in Ontario, at Kingston and Prescott; and, in the Province of Quebec, at Montreal, Quebec, St. John's, South River, Blairfindie and Sorel, besides small lots scattered throughout both Provinces.

Respecting the arrears, it is to be stated that the existing widely spread commercial depression made it difficult to collect even the comparatively small revenue of the year.

In the past, during the efficient supervision of these lands by their late Commissioner, Lieut.-Col. W. F. Coffin, it was considered not desirable to exercise undue pressure upon purchasers or tenants, and this policy under the approval of the Ministers of this Department has been continued. As he has already pointed out, in the cases of purchase the instalments paid have enhanced the proportionate value of ultimate security and therefore there is no risk of loss.

Whilst thus permitting, on so unexceptionable security, a certain laxity in payment of instalments, it might be expedient to use more stringent measures in securing regular return of interests thereon, and of leasehold rentals. The payment of these, though it may involve a hardship of the same kind, is one very different in degree from that of also paying capital sums.

Though customary, no reference is made here to the history of the past business of the Ordnance and Admiralty Lands, as it can be readily obtained from the exhaustive reports of their late Commissioner, and also that it is not presumed that any compilation from these could be either as useful or as interesting as the originals.

The lands belonging to the estate of the Bank of Upper Canada came, with the Ordnance lands, under the supervision of this Branch of your Department.

The receipts from them for the last fiscal year, were \$2,396.36.

One sale was made, being that of Lot 21, Concession 5, Uxbridge, for the sum of \$2,000.

III.—SURVEYS.

In the Province of Manitoba and the territory adjoining, the large area that had been, in previous years, laid out in townships and sub-divided, has, so far, met the principal need of progressive occupation.

But various settlements springing up in remoter parts of the North-West Territory, it has become necessary to provide for these by making detached surveys of townships and of river frontage farm lots.

The Special Survey of Standard Meridians and Parallels has been prosecuted for some seasons past, with the view of affording that connection with existing surveys by which this could be effected, and of ensuring that townships so laid out, in advance of the extension of the general system, in localities widely apart, and remote from the main body of surveyed Dominion lands, should be found to have been correctly placed in the position they should occupy in that system when it is extended from Manitoba to British Columbia.

The Survey in question also embraces the determination of the latitudes and longitudes of points throughout the territory, for the purposes of contributing to its correct cartography and as a check on measured surveys.

The accompanying map—forming part of its returns for the current season—is intended to indicate its operations up to the present time. They extend from the International Boundary, at West Lynne, on the Red River, following its valley and those of the Assiniboine and Saskatchewan Rivers to a point about 15 miles westward of Fort Edmonton, or nearly at the 115th meridian of west longitude from Greenwich, and approaching the base of the Rocky Mountains.

Besides its purely surveying results, much information respecting the character of the country traversed has necessarily been obtained. Of that which is most important it will be here endeavoured to briefly convey the outline.

It will be needless to quote anything relating to the Province of Manitoba, or the surveyed townships adjoining it, as, through the advance of settlement, both have become familiarly known, and also that, already, published reports of subdivision surveys have given of each township a detailed description.

In addition to the concurrent testimony of previous explorers and travellers, the information gained would indicate in that part of the North-West Territory westward of already surveyed townships, and on the line of this Survey, three principal fertile and extensive areas that would most invite future occupation.

The first of these, proceeding westward, lies along the Second Meridian and Ninth and Tenth Base lines, embracing the country between the Big Cut Arm Creek and the Assiniboine, that about the Fishing and Quill Lakes, and includes the arable lands of the Touchwood Hills and in their vicinity.

As a moderate estimate of the extent of good land seen, it may be affirmed that two hundred townships of first-class character for farming purposes could be laid out in this tract. They would possess an excellent loamy soil; good water would be found in amply sufficient quantity and frequency, and wood enough for fencing and fuel, though not generally so for building.

The estimated number of townships is that which would correspond to the area of the more fertile land of which, in this part of its course, the Survey is cognizant; but it by no means follows that such would be its limits. This fertile tract may

extend, and in all probability does extend, with greater or less continuity, northward, across the valley of the Red Deer River, to the second of the three areas stated above; the only change in character that is likely to be found being the favourable one, in that region, of having a better wood supply.

The next stretch of country that would prove preferentially attractive to immigrants is that extending from Fort Carlton, on the north branch of the Saskatchewan, eastward, down the south side of that river, across its South Branch, thence continuing eastward down the valley of the Root River, another of its tributaries, and along the northern slopes of the Pasquia Hills.

The number of townships that might safely be estimated in this tract would be sixty.

As in the previous case, the estimate is, in all probability, a small fraction of the total of continuous area fit for settlement. Its extension to the eastward is not definitely known to others than Indian traders and hunters, but it is likely that, on the side next the Saskatchewan, it is limited by the lagoons and marshes south of Cumberland, whilst, on the side next the Pasquia Hills, the dry and arable land may extend along their northern base, and round them in such wise as to join that which will no doubt be found to occur on their southern slope, and in the valley of the Red Deer River.

The nucleus, or, as it is not central, the commencement of growth, of the occupation of this region, is already well established in the thriving settlement of Prince Albert.

In the character of its surface it closely resembles the area first mentioned, with the difference, in its favour, that there is a much greater proportion of woodland, whilst there is still a sufficiency of prairie to offer all the facilities for carrying on agricultural operations that the term prairie usually implies. It also possesses some special advantages of communication and transport by the waters of the Saskatchewan and its branches.

Proceeding westward from the division last described, the information obtained on the Survey and on its attendant side explorations, or trail routes, would definitely sustain the generally expressed opinion of previous travellers, that the valley of the Saskatchewan, especially on its southern side, becomes less fertile west of the meridian of Fort Carlton.

It would appear that for an interval of at least four degrees of longitude, the soil is generally much lighter than that of the areas defined above. Excellent land may, however, be found here and there throughout the whole of this interval, witness that on the slopes of the Eagle Hills south of Battleford, or the alluvial plain west of Carlton, between the Green Lake Trail and the Thickwood Hills, or again, that some miles east of Fort Pitt and North of the trail from Carlton. These examples indicate that a better knowledge of this part of the country may bring to light many places equally attractive for settlement to those in the more uniformly fertile regions that lie both to the eastward and the westward of it.

Passing onward to the next and last of the three divisions specified, it may be defined as the Upper Saskatchewan, or Victoria and Edmonton District, and as including the more immediate valley of the Saskatchewan from Saddle Lake, on the trail along the northern side, nearly to the 115th meridian of longitude. It is roughly estimated that two hundred and forty townships could be located in this district.

The greater part of this area will, for agricultural occupation, compare favourably with those already described; good water is abundant, and the proportion of wood to prairie is such that there is ample supply of the former for all purposes.

In this section of the country, spruce of large size, and well adapted for building-timber or for making sawn lumber, is frequently met with. The soil is such that, in various places, those engaged in the Survey were inclined to rate it as equal in fertility to the rich alluvium of the Manitoba prairies.

Of subdivision surveys under contract but ten townships were given out during the past season.

Owing to their remoteness, and the comparatively late date at which their survey was commenced, the full returns and reports for them have not yet been received. They are all in the vicinity of Prince Albert Settlement, and in the country included between the north and south branches of the Saskatchewan, near their junction.

The survey of the river frontage lots in that settlement, and also of the similar lots for half the settlement of St. Laurent on the South Branch, was effected.

The demarcation of the boundaries of the Province of Manitoba was completed this year, sixty-eight miles of their course that, at the date of the last report of this Branch, remained to be surveyed, having been established and marked in the field.

The survey, in that Province, of certain roads, under the Act 39th Victoria, cap. 20, has also been prosecuted during the past season. The surveyor entrusted with this duty reports 193 miles as having been completed.

Reports of the different sections of the Special Survey, and notes on the methods of observation and examples of computation of the same, are appended.

Meetings of the Board of Examiners for Dominion Land Surveyors, were held in November and May at Ottawa, and in June at Winnipeg.

The following gentlemen passed at these the requisite examinations, and received commissions and higher certificates :—

W. A. Ashe, Quebec, P.Q.	T. Fawcett, Uffington, Ont.
C. P. Aylen, Aylmer, P.Q.	J. Galbraith, Toronto, Ont.
E. Deville, Quebec, P.Q.	O. J. Klotz, Berlin, Ont.
J. S. Dennis, Jr., Ottawa, Ont.	A. P. Patrick, Ottawa, Ont.
W. F. Thompson, Cannington, Ont.	

Commissions were received by :

M. Aldous, Ottawa, Ont.	T. Drummond, Winnipeg, Man.
T. Berlinguet, Quebec, P.Q.	J. W. Vaughan, " "
G. B. Bemister, Winnipeg, Man.	R. A. Wilson, " "

Several candidates passed the preliminary examination.

I have the honour to be, Sir,

Your obedient servant,

LINDSAY RUSSELL,

Surveyor-General.

PART II.

APPENDICES

TO THE

REPORT OF THE SURVEYOR GENERAL,

OF

DOMINION LANDS.

APPENDIX No. 1.

DOMINION LANDS OFFICE,
WINNIPEG, 30th October, 1878.

SIR,—I have the honor to submit the following report of the business of this office and branches at Portage la Prairie, Emerson, Little Saskatchewan and Pembina Mountains, for the past year.

It affords me satisfaction to be able to report that the number of settlers who came into this Province during the past year was very much greater than in any previous year, so much so that I may safely say that, at least, twelve thousand have been added to our population and not only has the number of settlers been greater, but the proportion of those having sufficient means to insure success has been greater than in former years, and the result has been that, with very few exceptions, those settling upon lands during the year express themselves well satisfied with the country and with their future prospects.

On reference to the schedule marked A, accompanying this report, it will be seen that the total amount of lands taken up during the past season, has been 682,591 acres, as against 400,424 acres last year; of this amount 280,022 acres were taken up as free grants under the Homestead law, and 256,791 acres entered as either Pre-emptions or Forest Tree claims, representing a total of 336,813 acres entered for actual settlement, thus leaving only 145,778 acres as having been purchased by cash or scrip or by location of warrants, &c.

I have again to report a large increase in the correspondence of this office, the number of letters sent having been 2243, exclusive of the very large numbers of letters replied to by printed forms. Over 10,000 pamphlets and maps have also been distributed during the past year. The number of letters received was 2,668.

The investigation of claims preferred to Half-breed grants and scrip, has continued to entail a large amount of work, but I hope that almost all claims of this nature have now been disposed of.

During the past year the lands set apart for the children of Half-breeds for four of the parishes have been finally allotted to them and another parish is now in process of being drawn. I trust that this work will be finally completed by the end of the year or very shortly afterwards.

Only 35 claims have been taken up under the provision of the Act 39 Vic., chap. 19. I think it would be advantageous to encourage this class of entry by reducing the number of acres required to be cultivated and planted in trees each year.

I have been unable to acquire any information regarding the progress of the Icelandic Colony at Lake Winnipeg. No entries have been made by them or on their behalf.

The schedule marked B shows the new settlements which have been formed during the past year.

I have the honor to be, Sir,
Your obedient servant,

DONALD CODD,
Agent of Dominion Lands.

The Surveyor General
of Dominion Lands,
Ottawa.

APPENDIX No. 2.

SURVEYS OFFICE, DOMINION LANDS,
WINNIPEG, MANITOBA, 31st October, 1878.

SIR,—I have the honor to submit the following report of surveys, and of the business of this office, for the year ending at this date.

The greater portion of the field operations during the past season having been under the immediate charge of the Assistant-Surveyor-General, my report will necessarily be brief.

The survey of the township lines to complete the north and east boundaries of the Province—as defined in the Act 40 Vic., chap. 6—was effected during the past winter. Eighty-eight miles of township outlines were run in this survey, and, in connection therewith, a traverse survey (about 89 miles) was made of a portion of the Winnipeg River, and of part of the south-easterly shore of Lake Winnipeg.

The roads leading from Headingley to the south-west corner of the Province, and from Winnipeg south to the International Boundary, and easterly to Oak Point—being portions of the “old trails or travelled roads” referred to in the Act 39 Vic., chap. 20—in all about 200 miles—have been surveyed, but the surveyor entrusted with this service having been obliged to discontinue his work on account of unfavorable weather, the survey of the road on the east side of the Red River, from St. Peters to the International Boundary, was not effected.

A schedule of Indian Reserve surveys is herewith enclosed.

Surveys Office.

During the year, 265 applications for letters patent, under the Manitoba Act, have been received, and 187 have been recommended for patent, making the total number recommended, to date, 1,493. A large number of claims are still awaiting further evidence.

Most of the conflicting claims which had been referred to the Commissioner appointed under the Act, 38 Vic., chap. 53, have been reported upon by him, and the remainder of the advertised cases will probably be disposed of before the end of the year.

The following shows the correspondence of the office during the year:—

Letters received.....	720
Letters sent.....	1,376

I have the honor to be, Sir,
Your obedient servant,

A. H. WHITCHER,
Inspector of Surveys.

The Surveyor-General
of Dominion Lands,
Ottawa.

APPENDIX No. 3.

WINNIPEG, 23rd November, 1878.

SIR,—I have the honor to submit the following annual report of the operations of the Special Survey party, Section 1, under my charge during the past season.

Having received your instructions, I proceeded at once to Winnipeg, organized the party and procured new outfit, transport animals, &c., the equipment of last year being divided among Sections 3 and 4.

The party left Winnipeg on the 6th June, arriving at Prince Albert on the 6th July. Taking advantage of the slow rate of travel of my carts, I made a detour by the Rapids of the Assiniboine River, Ellice, Qu'Appelle and the Mission at Touchwood Hills, in order that I might speak advisedly, from personal observation, in comparing other places in the North-West with the fertile Saskatchewan Valley.

Having a smaller party than formerly, and working much of the time in timber and impeded by ponds and river crossings, one hundred and thirty-three (133) miles of line was the most that could be effected in time at disposal.

A great part of the season's work was preparing the way for the immediate sub-division of the Saskatchewan settled districts.

Some time was consumed running a portion of the boundaries of the Indian Reserve, south-east of Prince Albert, contiguous to our work.

As will be seen on reference to my preliminary report and plan, mailed to you on the 21st ult., settlement is extending towards LaCorne and south-west thereof, and I would suggest the sub-division of several townships there, next year, to encourage settlement as well as prevent complications arising from conflicting claims.

A large area of promising land would be developed by the extension of the Twelfth Base Line (and its lateral meridian exterior) easterly from the Third Principal Meridian. This would take in that portion of the Carrot River country already settled on, explored by myself, on my homeward trip, this fall.

Description of Country.

Excepting a small portion of land broken by numerous ponds, and a sandy strip east of the Forks of the Saskatchewan Rivers, estimated by me at about ten per cent. in all, the whole region through which our operations extended, from the Third Principal Meridian eastward for sixty miles, with a breadth of twenty miles, is admirably adapted to agricultural and pastoral purposes. The whole of this strip is well watered with streams and ponds, and has a fair share of rather small sized poplar. The smallness of the timber is owing to the frequent fires which overrun this region.

The land to the south-east of Prince Albert Settlement, across the south branch of the Saskatchewan, is superior in many respects to that lying between the two branches, which is rather rolling, light in places, and broken by ponds, whereas that to the east and south has gentle slopes and a uniformly excellent soil of about eight to ten inches of dark rich loam, underlaid by a not too stiff clay.

A large sample, dug at random, of this soil, shewing a vertical section of two feet, is herewith forwarded, as visible proof of its excellence. A further evidence of the capability of the soil was given by the wheat crop, specimens of which, collected from a small settlement about ten miles south-west of La Corne, unfortunately became damaged on the journey in.

During the six years I have spent in surveys in various parts of Manitoba and the North-West, I have never seen greater luxuriance of growth than that here, nor do I consider the soil of that Province, which is frequently a stiff clay, as inviting to the farmer as the more friable soil of this section.

Except along the main streams, where spruce, tamarac and jack pine are met with, very little timber suitable for building purposes is to be found, although a sufficiency for fencing exists almost everywhere. A large quantity of the best wood along the main Saskatchewan River is annually culled out for the Hudson's Bay Company's steamboats.

Already settlers are taking up land at the "Forks," and east and south thereof, in view of the possibility of future railway facilities in addition to the means of communication afforded by the Saskatchewan.

Instruments, &c.

The work during the past season was principally along Correction lines. The usual method of careful azimuths and check chainage with two chains of unequal lengths was carried out.

I would like to make mention here of the working of the new line transit, built, under your personal supervision, last year, by Messrs. Troughton & Simms, London, England.

A season's experience enables me to pronounce it, to be for a Canadian surveyor, more effective and less liable to derangement than any of the numerous instruments which have come under my notice.

The probable error of an observation by any one careful set up of the new instrument did not exceed five seconds, it frequently reached as high as twenty seconds in reading *horizontal* angles with the well constructed instruments of the pattern used in previous years, made by the same makers.

A specimen observation is herewith appended.

Accompanying the reports are the following : —

1. Map, 20 miles to inch, illustrating all operations of the Special Survey to present time
2. General map, scale 6 miles to inch.
3. do 35 do

I have the honor to be, Sir,

Your obedient servant,

ALEX. L. RUSSELL, D.L.S.,

In charge of Section 1, Special Survey.

LINDSAY RUSSELL, Esq.,
Surveyor-General,
Ottawa.

APPENDIX No. 4.

OTTAWA, 16th January, 1879.

SIR,—I have the honor to present the following report of the operations of Section No. 2 of the Special Survey, under my charge.

I left Ottawa on the 18th June, 1877, and arriving in Winnipeg on the 29th, I was engaged there in organizing my party until the 11th July, on which date we started for the west.

When after a tedious and difficult journey over roads rendered almost impassable by the excessive rains during the month of June, we reached the Forks of the Saskatchewan trail, we found Mr. A. L. Russell's line (the 10th Base), and followed it up to his camp in order to observe for latitude at a point on the Third Principal Meridian. We arrived there on the 17th August. On account of cloudy weather twelve days were necessary to complete observations, which gave 27 feet as the probable error of the resulting latitude of the Astronomical Station.

On 30th August we broke camp and started west; we crossed the South Saskatchewan at Gabriel's Crossing and took the main trail to Battleford, round the Elbow and north of the Eagle Hills. Passing Battleford, we took the telegraph trail to Edmonton. This trail may be said to skirt along the northern limit of the plain country, passing through a country mostly sandy and gravelly and with but little water, but also through some rather extensive stretches of good land, well wooded and watered. The first of these occurs about twenty-five miles west of Battleford and extends several miles, after which water becomes scarce, and finally a wide stretch of plain occurs, covered with buffalo grass. Near Grizzly Bear Creek, about one hundred miles from Battleford, we again get into a tract of forty miles or more of good soil, rolling country with wooded hills and innumerable lakes. Another good tract occurs as we approach the Beaver Hills, 175 miles from Battleford. Going through this fertile stretch we reach Hay Lakes, at a distance of about 195 miles from Battleford. At this point we leave the telegraph line, to go northward to Edmonton. The Beaver Hill fertile region, however, appears to run a long way west of Hay Lakes, probably to the edge of the forest, and to the south-west it runs to Battle River, to join the fertile belt which runs along the upper part of that river.

The Hay Lakes lie in latitude $53^{\circ} 11'$ and in longitude by C. P. R. $30^{\circ} 50''$ east of Fort Edmonton, the distance from that place being about 33 miles by the trail. On this trail, seven miles from Hay Lakes, we enter thick bush, in which spruce may occasionally be seen, as well as a few spruce and tamarac muskegs, a sign of the proximity of the forest. This bush extends nine or ten miles along the trail. Crossing the "White Mud River," a small creek sixteen miles from Fort Edmonton, we enter a beautiful fertile tract, a gently rolling country with numerous clumps of poplar and frequent lakes. This extends to the Saskatchewan River at Fort Edmonton. We arrived there on the 22nd September and camped west of the Fort on the hill overlooking the river. Here I set up the large instrument and observed for latitude. Owing to a heavy snow storm and subsequent cloudy weather, I did not complete the observations until several days had passed. Eight pairs gave a probable error of sixteen feet. The station is marked by a hub driven in at the point, and by a post, similar to a township corner post, firmly planted about two feet to the south of it.

During the journey out, according to your instructions, I had painted finger posts planted at the following points on the Winnipeg and Battleford trail:—

(1.) Near Shoal Lake, (Mounted Police Station) to indicate the trail to Fort Pelly and Swan River Barracks.

(2.) On north side of the Qu'Appelle River, beyond Fort Ellice, to shew the trail to Fort Pelly.

(3.) On the Pheasant Plain, at the point where the trail from Fort Pelly to Fort Qu'Appelle crosses the main trail.

(4.) Near Touchwood Hills' Trading Post, to mark the trail to Fort Qu'Appelle.

(5.) At the "Forks of the trail" (now called Humboldt) where the trails separate going to the various ferries on the South Saskatchewan River.

(6.) On Gabriel's trail (*i. e.*, the more southerly of these trails, and the one usually taken by those going to Battleford) at the telegraph line, at which point branches off a new trail crossing the South Branch at the telegraph line crossing. This new trail, although much the shortest to Battleford, is little travelled on account of the scarcity of water.

(7.) On the hill west of Gabriels', where there are two posts, one to indicate the trail turning off to Carlton, the other at the separation from the Battleford trail of the trail running south to Cypress Hills, &c.

(8.) In the valley of Eagle Creek, at the junction of the plain and river trails to Battleford.

After the completion of the Edmonton observation, some delay was caused by the non-arrival of the freighter bringing the supplies for the party, and by the difficulty of procuring men to work on the line, the Big Lake half-breeds being then absent for the fall fishing at Lake St. Anne and White Lake. Finally, having procured but four men, I started work on the line on 11th October. The first thing necessary was to run a meridian north from the Astronomical Station to the latitude of the 14th Base, a distance of about $4\frac{1}{2}$ miles. This done, I turned off a chord of the parallel west on the proper azimuth to strike the 114th Meridian at the same latitude (that of the 14th Base). This chord was to be nearly 13 miles in length (this being calculated from the C. P. R. longitude of Fort Edmonton). But after running about 7 miles, the line struck Big Lake (or Lake St. Albert) in its widest part, apparently five or six miles across to firm ground. The last two or three miles being in thick bush, I went back $2\frac{1}{2}$ miles and ran another meridian north to clear the lake. This meridian, about the third mile, struck the Sturgeon River in the middle of the large settlement of St Albert's. At a point $3\frac{3}{4}$ miles north of the chord, being then clear of the Sturgeon River valley, I turned west on another chord which reached the 114th Meridian in $8\frac{1}{2}$ miles.

Having in this manner located the meridian, which would be the Fifth Principal Meridian, I ran it north to the 14th Correction Line and south to a point $3\frac{1}{2}$ miles south of the 14th Base, the last half mile lying on the "Stony Plain" (Prairie des Assineboines). Returning to the 14th Base, I ran a chord east on the proper azimuth to meet the first chord, cutting the line out down to the shore of the lake. I then ran west on the 14th Base to the end of one township. Having done this, I discharged the additional men I had hired for the line work, and after having made a traverse of Big Lake and of part of the Upper Sturgeon River, and completed the first chord by chaining it across the ice of Big Lake, we returned to winter quarters in the Hudson's Bay Company's house, in the settlement of St Alberts, on the 18th December.

The total number of miles run was $51\frac{1}{2}$; the traverses afterwards made of the settlements of Edmonton and Big Lake were tied to the above lines. The lines were as follows:—The "first meridian" running north $4\frac{1}{2}$ miles from the Astronomical Station; the "first chord" running west 13 miles to the 114th Meridian of which the first five miles were through a more or less open country, the next two through thick poplar and spruce bush with numerous windfalls, and the remaining six across Big Lake and the swamp at the western extremity of it. The next is the "second meridian," $3\frac{3}{4}$ miles long, running for two miles through heavy bush, and for the rest of the distance through a mainly open country in the valley of the Sturgeon River. Then there is the "second chord" running through a tolerably flat country for $8\frac{1}{2}$ miles to the 114th Meridian.

The 114th Meridian runs through a flat country drained by the Upper Sturgeon River and by the Rosebud River, which flows into the western end of Big Lake. Between this latter river, which is a few chains south of the 14th Base, and the Upper

Sturgeon River, which is crossed by the meridian about $7\frac{1}{2}$ miles north of the base, the country is nearly all good prairie land, with many clumps of poplar, &c. North of the Sturgeon River the country is open and the soil is not so good. South of the base the line runs through muskegs for nearly three miles, when, emerging from the valley of the Rosebud River, the Stony Plain is reached, which is, notwithstanding its misleading name, a very fertile region many miles wide. It is bounded on the north by a strip of large spruces.

The 14th Base, leaving the Rosebud River to the south, runs into the Rosebud Hills, in which also there are many localities exhibiting good soil.

These township lines are defined by posts marked in the usual way, but no mounds are built, the work having been done in winter. The other lines are marked by posts every half mile.

After our arrival in winter quarters, the remainder of December and January was devoted to office work, such as the compilation of returns of the astronomical observations and the field notes of the lines run, &c.

During February we traversed Big Lake Settlement, and I began making a plan of it, in order to be able to understand the conflicting claims which in that settlement are exceedingly complicated.

At the end of February, in accordance with your instructions, I went to Hay Lakes to take observations (in conjunction with your own at Winnipeg or Swan River) to determine the longitude of that place. As you are aware, I waited at Hay Lakes for over a month without being able to effect our object; but in the interval I made an exploratory trip to Battle River Settlement, seventeen miles distant towards the south-east. The telegraph line between Battleford and Hay Lakes having been in a great part destroyed by an extensive prairie fire in the latter days of March, rendered a longitude determination hopeless for many weeks at least. In the early part of April I sent in to Edmonton to obtain transport to bring the party back to the settlements. Owing to the running of the ice in the Saskatchewan River, which was just breaking up, the carts from Fort Edmonton could not cross the river for several days, but after we had been many days waiting, they arrived, and we reached Big Lake again on the 20th April. We forded the Saskatchewan River at Fort Edmondton, so low was the water after the extremely mild and snowless winter.

I spent a week in completing the plan of Big Lake Settlement, and in collecting information with regard to disputed claims. I then set to work to traverse as much of Edmonton Settlement as I could, mindful that, as I was instructed to reach Winnipeg by the 1st July, it would be necessary to start from Edmonton not long after the 1st May, unless advised otherwise in the meantime. The mail arrived on the 30th April with no instructions. I concluded, however, to continue the Edmonton traverse and await the next mail, due in three weeks.

The Edmonton Settlement extends along the Saskatchewan about eight miles, principally on the north bank, although a few settlers have taken up claims on the south side of the river. There are also several settlers along the trail from Edmonton to Big Lake. The soil throughout this Edmonton Settlement is excellent, and there is plenty of wood everywhere, while there is good pasturage a few miles away from the river.

In the middle of this month I visited Lake St. Anne, which is about 45 miles west of Fort Edmonton. It is the source of the Sturgeon River, which flows through Big Lake and empties into the Saskatchewan River 24 miles below Fort Edmonton. There is an old settlement here, but as there is an abundance of whitefish in the lake the people do but little farming. The country is all thickly wooded and the soil is very good, some small clearings on the shore of the lake yielding large crops of good wheat, barley and potatoes. There is a water-mill here, but it is on a stream of insufficient size.

I returned from Lake St. Anne the evening that the mail arrived. As it brought no new instructions, it was necessary to prepare to start for Winnipeg. I might mention here that on this date (20th May) I received two tele-

grams from Ottawa and Winnipeg, of dates 30th March and 2nd of April respectively.

On the 25th May we started on the trail *via* Hay Lakes and the telegraph line. Having gone over a hundred miles, we met the repairer of the telegraph line rebuilding the portion burnt down in the prairie fire of 29th March. He attached an instrument to the wire, and after a day's delay, handed me your message, telling me to return to Edmonton and survey the other settlements on the Saskatchewan River, this being in reply to a message previously sent by me, by mail, to Battleford, informing you of my intention to return. Accordingly we turned back, and arrived again at Edmonton on 6th June.

Our time up to the 19th June was taken up in finishing the traverse of Edmonton settlement, and in traversing the "Lower Settlement," five miles from the Fort, down the river. On the 20th we went on to Fort Saskatchewan.

Considering it desirable that the longitude of these important settlements should be obtained as closely as possible, and seeing that the carrying of the chronometer in a boat down the Saskatchewan River was the most practicable method, I procured a small skiff for that purpose. Using it, I made a micrometer traverse of the river for about eight miles in front of the whole settlement of Edmonton. The camp at the Lower Settlement, five miles from the Fort, being connected with the meridian north from the Astronomical Station by a traverse, was made the initial point of the longitude survey, and observations for time were taken there on the 17th of June. On the 20th the chronometer was taken in the boat to Fort Saskatchewan.

The settlement here is chiefly on the north side of the river, opposite the Fort. The soil is very fertile, and the settlers have large fields under cultivation. They have a water mill, just built, on the Sturgeon River, about eight miles north from the settlement, in the centre of a most fertile, though at present unoccupied, tract of land. A few miles north of this there is a large extent of fine spruce bush in the vicinity of Egg Lake, from which a large amount of building timber is procured for the use of the Mission at St. Alberts. The Fort Saskatchewan tract of good land extends southerly across the Saskatchewan to the Beaver Hills, and easterly across the Sturgeon River as far as Vermillion Creek, 14 miles.

Having finished the traverse of Fort Saskatchewan Settlement, we started on the 28th June to go to Victoria. We lost some days in looking for a strayed horse the search for which I was at last compelled to abandon.

Mr. Checkley, accompanied by Mr. Dennis, took charge of the chronometer and proceeded in the skiff down the river, taking by the way the observations for longitude, while I went overland with the remainder of the party. We arrived at Victoria on the 30th June.

There is merely a small settlement here, on a flat point on the north side of the river valley, and comparatively little land is cultivated. The soil is lighter than that of Edmonton, but gives good crops. It is heavier further back from the river. A strip of good land of many miles in width, extends all the way from Edmonton to Saddle Lake, 38 miles by the trail east of Victoria, a total distance of 110 miles by the trail. All this strip is excellent arable land with the exception of 14 miles between Vermillion Creek, 36 miles west of Victoria, and Sucker Creek, 22 miles west of Victoria, which 14 miles is sandy soil, covered principally with Banksian pines. East of Saddle Lake the soil becomes sandier, as we go south-east towards Pitt and Battleford.

Having traversed Victoria Settlement, we left that place on 6th July, and arrived at Fort Pitt on 13th. Here there was no settlement to survey, but I set up the large instrument and observed the latitude. The weather was bad, and it took ten days to get seven pairs of stars. These were all taken by Talcott's method, and gave 19 feet as the probable error of the resulting latitude. Having marked the station by a small post, near the Saskatchewan, S.S.E. of Fort Pitt, we started on the 24th to go to Carlton. We arrived at Fort Carlton on 31st July.

Our next work was to proceed, in accordance with instructions you handed me on our meeting at Prince Albert, to establish block outlines south of that settlement. I

began work by running the eastern boundary of township 46, range 27, west of the Second Principal Meridian. The first five miles of this is a prairie with clumps of poplar bush; the remaining mile is sandy, approaching the valley of the South Saskatchewan River, which appears to be about one and a-half miles south of the township corner.

Having posted and mounded this line, I then proceeded to the 106th Meridian in order to run the Twelfth Correction Line west. I began this from the end of Mr. A. L. Russell's work of the previous season, two and a-half miles west of the 106th Meridian. I ran the north side of the road allowance, putting in posts also on the south side, down to the North Saskatchewan River, about 13 sections from the Meridian. Nearly all of this was through a very sandy country, covered principally with Banksian pines. There are numerous muskegs in which the water is strongly impregnated with iron, and which form the source of Beaver Creek and of another creek flowing north into the Saskatchewan River west of the Principal Meridian. Near the river the line strikes the extreme south-westerly end of the "Lily Plain." On 4th September we moved out of the bush and camped at the crossing of Beaver Creek, on the Carlton and Prince Albert trail, where we lost the horses in the thick willow brush. This delayed us until the 9th, on which day we went on to the northern crossing of the South Saskatchewan.

On the following day I began the 12th Base from the 106th Meridian, on the eastern side of the South Saskatchewan, and ran it down to the water. Next day we crossed the river, which is here 400 yards wide, and produced the line through a thick belt of tamaracs that extends along its western bank. Ascending the hill to the west the line ran into thick poplar bush. The country here for some distance is a network of lakes, the shores of which are covered with thick growths of willows, &c. The soil is sandy. This sort of country extends for some two ranges with only about three miles intervening of ordinary prairie. After this, in the third range, the country becomes open but the soil is somewhat light for cultivation. In the Fourth Range west of this Principal Meridian the line strikes the North Saskatchewan at the end of the twentieth section from the Meridian, and at about three miles north-east of Fort Carlton.

The line being finished, and a traverse made to connect with Fort Carlton, we returned to Prince Albert, where I paid off the additional men engaged for the block work. On the 7th October we left Prince Albert, and on the 8th November arrived in Winnipeg.

The weather during September and October was most disagreeable. From 14th September to the end of the month there were few perfectly fine days, and numerous rain and slight snow storms. On 14th October, while we were in Touchwood Hills, there was a heavy fall of snow, which stayed on the ground and rendered travelling both difficult and unpleasant. It became better, however, by a thaw which removed the snow as we were getting near the boundary of Manitoba.

From the above hasty sketch of my work, it will be seen that in addition to the strictly astronomical work of determining the latitude of principal stations, I traversed the settlements of Big Lake, Edmonton, Fort Saskatchewan and Victoria, and obtained information with respect to the disputed claims in these places.

With reference to these disputes, I would say that only in the first named settlement, and in a limited degree in the second, is there any difficulty at all about boundaries; and in the first, any trouble might be easily avoided if the settlement were to be surveyed into lots.

I append a table of latitudes and longitudes of Special Survey Astronomical Stations, and of other leading points determined by sextant and theodolite observations by myself and Mr. Checkley.

I also give, as an example of the latitude observations, one taken with the large instrument at Fort Edmonton, and a copy of the computation of mean latitude and the probable error, together with a slight sketch of the method of observing with the instrument.

For further details I beg to refer you to the reports and illustrative plans of the settlements which I surveyed under your instructions, and to the field notes of the various lines run.

I have the honor to be, Sir,
Your obedient servant,

W. F. KING, D.L.S.,
In charge of Section No. 2, Special Survey.

LINDSAY RUSSELL, Esq.,
Surveyor-General, Ottawa.

APPENDIX No. 5.

OTTAWA, 26th November, 1878.

SIR,—I have the honor to submit the following report of the proceedings of Section No. 3 of the Special Survey, employed in running the Base Parallels and Meridians from the 106th Meridian of longitude, or Third Principal Meridian, to the 110th Meridian of longitude, or Fourth Principal Meridian, in the North-West Territories, during the past season.

I arrived in Winnipeg on the 28th of May, and was engaged there until the 5th of the following month in making the necessary preparations for the service.

Leaving Winnipeg on the 5th of June, I arrived, on the 29th of that month, at the inter-section of the 106th Meridian and 10th Base, the point of commencement of my work.

From this point I proceeded to run the 10th Base westerly, having corrected the azimuth of the first chord for the station error of sixty-seven links in latitude. Having produced this Base 108 miles to the nearest meridian exterior to Battleford, that between Ranges 18 and 19, I then turned to the north and ran thirty-six miles to the 11th Correction Line, making the necessary jog on the 10th Correction Line for the convergence of meridians.

Owing to the position of Battleford being, on existing maps, in error in longitude some 10 or 11 miles, I had to run the 11th Correction Line thirteen miles east, to make the connection with the Astronomical Station of the survey at that place, which latter was effected on the 2nd of September. I found that the latitudes established respectively by observation and survey, did not agree within 5·27 chains. Presumably, the greater portion of this difference is due to local attraction, as deviations of the vertical, to a similar extent, were observed on the 49th Parallel immediately south of this.

A delay of two days occurred, at Battleford, in communicating this result by telegraph to you for your directions. On obtaining them, I reposted the 11th Correction Line and also the meridian south to the 11th Base, making each section the necessary amount, 21·9 links shorter, so as to leave at the 11th Correction Line, one half the amount of the difference between the astronomical and the measured latitudes.

I then continued the 11th Base west to 110th Meridian of longitude or Fourth Principal Meridian, thus terminating my work for the season, the total distance run and marked being two hundred and fifteen miles.

I experienced great difficulty in making progress on the 10th Base, owing to the want of wood and water, the country along that line being almost destitute of both. On one section of it, water had to be carried for the party, and wood for posts and fuel, in our carts, for a distance of 32 miles.

The soil on the part surveyed of this base, with the exception of some few miles in the Eagle Hills, is of a very poor nature, being light and sandy, and in most cases alkaline. In fact, none of the country between the 106th Meridian and the point at which I turned northward is of any use for agricultural purposes.

The south branch of the Saskatchewan River was crossed on this line at 25 miles from the 106th Meridian, the river here is some 12 chains in width, with a very strong current; the banks are low and edged by a mud deposit of the river, not of any width that would be of use for cultivation.

The country along the Meridian, from the 10th Base to the 11th Correction Line, is of a better nature than that on the 10th Base, for although the soil is light it is well watered, and the pasturage is excellent. It is, however, destitute of wood.

The 11th Correction Line runs through the hills on the south side of the Battle River Valley, and is in bush nearly all the way.

The soil generally is exceedingly poor, and, although improving a little in the immediate vicinity of Battleford, is even there very light and sandy.

From the Meridian Ranges 18 and 19 to the 110th Meridian, the country is decidedly more attractive. For the first thirty miles there is a scarcity of wood, but good water abounds. Indeed, as a rule, this was the only country passed over in which the water met with was not more or less alkaline.

From the exceeding richness of its grasses and the special fitness of the kinds produced, I am led to believe that it excels, as a grazing country, anything I have seen in Manitoba or the North-West Territories.

I closed my work for the season on the 4th of October, and arrived in Winnipeg, after a very disagreeable journey, on the 5th of November.

I have the honor to be, Sir,
Your obedient servant,

J. S. DENNIS JUN., D.L.S.,
In charge of Section No. 3, Special Survey, N. W. T.

LINDSAY RUSSELL, Esq.,
Surveyor-General.

APPENDIX No. 6.

DOMINION LANDS OFFICE,
OTTAWA, 13th November, 1878.

SIR,—I have the honor to submit the following report of the operations of Section No. 4 of the Special Survey, engaged in surveying the settlements of Prince Albert and St. Laurent, in the North-West Territory, during the past season.

I arrived in Winnipeg on the 28th of May, and until the 5th of June was employed in organizing my party, at which date we started for the Saskatchewan.

We arrived at Prince Albert Settlement on the 3rd of July and camped at the extreme west end of the settlement near where the Third Principal Meridian crosses the North Saskatchewan River.

My first work was to make a careful instrumental traverse of that portion of the river along which the survey would extend, thus enabling me the better to determine along which legal subdivisions I should run the rear settlement line, so as to conform, as nearly as possible, to a uniform system of lots two miles in depth.

The front base line was next started from a convenient point on the 3rd Principal Meridian twenty-one chains and fifty links north of the north-east corner of section twenty-five, township forty-seven, range one west, and produced eastward through the settlement, deflecting it north or south at such points as it was necessary to do so in order to follow as closely as possible the principal road through the settlement. On this base line all the front posts are placed.

Between the 3rd Principal Meridian and meridian exterior, Ranges twenty-six and twenty-seven, the lines are all laid down parallel to the 3rd Principal Meridian, the closing errors and that arising from convergence of the meridians being thrown into the lot next adjoining the meridian exterior on the west. Between the meridian exterior before mentioned and the west boundary of the Hudson's Bay Company reserve, the lines are laid down parallel to the meridian exterior, the closing errors being thrown into the lot adjoining the Hudson's Bay Company reserve.

In every case when land was occupied and improved and there existed any dispute between the occupants of adjoining claims, I had them agree together before me on some point which was to be established as their common boundary: in the majority of instances they requested me to decide between them; their post was then planted where, under the circumstances of the case, I considered it best divided their claims, and they mutually agreed to it as their boundary line.

Where the land was unoccupied and unimproved, merely having been taken up," I surveyed it into ten-chain lots, and entered the claimants' names, for it on the plan, stating my opinion to them that such claims could at most merely give them a preferential right of purchase.

According to your instructions, a road, one chain in width, has been left at intervals of about one mile, running from the rear line of survey out to the river, also a road, one and a half chains in width, all along the rear line. In a few instances, when there were actual settlers inside of the two-mile limit, I was obliged to lessen the depth of the river claims sufficiently to allow the settler in the rear to have a legal quarter section; in the cases referred to, the front claims are of such a width as still to give the holders more than a homestead right of one hundred and sixty acres.

The settlement is in a flourishing condition, and there is a noticeable increase in the amount of land under cultivation since last season. Property is also rapidly increasing in value. Lot No. 59, 12 chains frontage, changed hands this summer for \$2,500, cash.

On the 5th of September, the survey of Prince Albert Settlement was completed and, on the day following, we moved to St. Laurent. This Settlement extends along both sides of the South Saskatchewan River from its intersection with the 3rd Principal Meridian south to "Gabriel's Crossing," a distance of over twenty miles. I saw that it would be impossible to make a complete survey this season, and, therefore, determined to work in that portion of the settlement where it was most immediately required.

A careful instrumental traverse was first made of the river between the points before mentioned, also a preliminary survey shewing all the improvements, from which it was evident that the most important part of the settlement lay on the east side of the river, below "Batoche's Crossing." Here I decided to commence work. I started from the 3rd Principal Meridian at the north-east corner of section twelve, township forty-four, range one west, producing the section line west to the river. From this line the lots are laid out, conforming as nearly as possible to ten chains in width and two miles in depth, one mile north and eight miles south along the east side of the river, road allowances being left as in the Prince Albert Survey.

The work was closed on the 11th Correction Line which we produced from the 3rd Principal Meridian west to the South Saskatchewan River. The producing of the 11th Correction Line completed my season's work.

For the numbering of the lots and the other details of the survey, I beg to refer you to the plans of Prince Albert and St. Laurent which accompany this report.

When camped near "Batoche's Crossing," convenient opportunity occurred of taking a cross section of the South Saskatchewan River, which it will be interesting to compare with one taken of the North Saskatchewan at about the same time last season. The results were as follows:—

Velocity (mean).....	1.875 miles per hour.
Width (from water to water).....	613 feet.
Greatest depth	9 "
Mean depth.....	4.58 "
Sectional area.....	2,811 square feet.
Discharge,.....	about 8,000 cubic feet per second.

Results of Cross-section of North Saskatchewan River, taken September, 1877:—

Velocity	= 1.9125 per hour.
Width (from water to water)	= 907 feet.
Greatest depth	= 8.3 feet.
Mean depth	= 6.1 feet.
Sectional area	= 616.8 square yards.
Discharge	= 15,620 cubic feet per second.

That portion of the South Branch which has come under my observation is very free from obstructions, not a single sand bar was noticed in the whole distance traversed, while, taking a similar distance on the North Branch, there will be found fifteen or twenty shifting sand bars. The water this season was, I estimate, eighteen inches lower than at the same date last season. Taking this into consideration, the measurements would go to show that the amount of water flowing through the South Branch is about seventy per cent. of that flowing through the North Branch. Notwithstanding this difference of volume, it is my opinion that navigation on the South Branch can more easily be effected than on the North Branch.

The entire population of St. Laurent consists of French Half-breeds, who, with few exceptions, live by buffalo hunting. They simply farm sufficient land to provide themselves with grain and vegetables for their winter use; they, nevertheless, fully understand the advantage of securing land, being well aware that, in a very few years, the buffalo will be exterminated, and that then they will be compelled to turn their attention to agricultural pursuits.

There are numerous large hay meadows in the rear of the settlement, from one to two miles from the river. This hay is cut and stacked in the autumn season, and furnishes abundance of fodder for their large bands of horses during the winter months.

The land on the east side of the river is generally of an excellent quality and such as can be farmed to advantage, while on the west side, except in small tracts, it is very light and sandy, and unfit for cultivation.

On the 5th of October we started for Winnipeg, where we arrived, after a very cold and disagreeable journey, on the 29th of October.

I have the honour to be, Sir,
Your obedient servant,

MONTAGUE ALDOUS, D.L.S.,
In charge of Section No. 4, Special Survey

LINDSAY RUSSELL, Esq.,
Surveyor-General,

APPENDIX No. 7.

SCHEDULE A.

STATEMENT shewing the transactions of the Dominion Lands Office at Winnipeg and Branches, for the Year ending 31st October, 1878; also the Total Acreage of Lands disposed of and amount received.

Nature of Grant.	Year ending 31st October, 1878.				From establishment of Office to 31st October, 1878.				Remarks.

W. F. KING, D.L.S.,
Section 2, Special Survey.

APPENDIX No. 8.—*Continued.*ON THE METHOD OF OBSERVING FOR LATITUDE WITH THE ALT
AZIMUTH INSTRUMENT USED ON THE SPECIAL SURVEY.

BY W. F. KING, D.L.S.

The instrument with which the principal observations were taken is an alt-azimuth and transit combined. Its circles are 12 and 8 inches, respectively, in diameter.

The vertical circle is graduated to five minutes of arc, and is read by two microscopes which divide the arc to one second or, by estimation, to less. A sensitive level is attached to the microscope-bearing frame. The telescope is furnished with a micrometer thread, by means of which a star can be bisected several times on one setting of the vertical circle.

The telescope having been set on a star, the vertical circle was clamped and a number of bisections of the star, usually six, made with the micrometer thread, the level being read each time. The microscopes and pointer were read either before or after the bisections; the "forward" graduations, *i.e.*, the graduations first reached by the microscope thread moving from the microscope zero with a forward motion of the screw, being read five times, and the "back" graduations, *i.e.*, those next behind the zero, being read three times. Thus a value of the error of runs was obtained each time for each microscope.

The instrument was then turned through 180° of azimuth, the observation of the first star having been completed, and the same series of operations performed on a star on the other side of the zenith of, when possible, nearly equal zenith distance.

Owing to circumstances which it is needless to detail, all the observations taken were restricted to the face left position of the instrument. In that position the circle readings increase with a decrease of zenith distance, and the observed circle reading deducted from the circle reading of the zenith, therefore gives zenith distance.

The readings of the eye piece micrometer on this face, increase with an increase of zenith distance, the forward motion of the screw being taken as positive. The distance of a star from the micrometer zero therefore, added to the zenith distance of the micrometer zero, gives the zenith distance of the star.

The level attached to the microscope frame is numbered from 0 to 120 through its whole length, the numbers being counted from the left. Hence, on face left, the smaller readings are always under the star, and consequently the correction to the zenith distance is the value of one division of the level multiplied by the excess over 60 (the middle point of the bubble) of the mean of the north and south readings, this excess being given its proper algebraic sign

$$\text{or } L = 1''.25 \times \frac{l_n + l_s - 120}{2}$$

Also if R be the number of revolutions of the micrometer screw and D the number of divisions

$$M = 1''.4566 \times (100 R + D).$$

In the accompanying figure let Z be the true zenith and Z' the zenith of the instrument, *i.e.*, the point in which the celestial sphere is met by that radius of the level tube which passes through the graduation marked 60, 60 being the assumed zero point of the level. Let M_0 be the point in which the collimation line of the micrometer zero meets the celestial sphere, the telescope being directed so as to bring the star into the field. Let S be the position of the star at the time of observation,

Then $L = ZZ'$ and $M = M.S.$

It will be seen from what has been said before that in the figure L and M are taken positively.

Let the circle reading be denoted by C , and let the zenith point of the circle, i. e., the reading of the circle when the collimation line of the micrometer zero is parallel to that radius of the level tube which passes through the point marked 60, be denoted by $\alpha + \delta\alpha$, α being the assumed value and $\delta\alpha$ the, at present, unknown correction to α .

Then $(\alpha + \delta\alpha) - C + L = M$, $Z' + ZZ' = ZM$.

$(\alpha + \delta\alpha) - C + L + M = ZS =$ zenith distance of the star; and if R be the refraction and $Am = \frac{\cos \phi \cos \delta}{\sin \zeta} \cdot \frac{2 \sin^2 \frac{1}{2} t}{\sin 1''}$ the correction to be applied to the

zenith distance at time of observation to give the zenith distance at transit.

Then true zenith distance on the meridian.

$$= (\alpha + \delta\alpha) - C + L + M - Am + R.$$

$$= \delta\alpha + (\alpha - C) + (L + M - Am) + R$$

or, reverting to the nomenclature employed in the computations of the observations,

$$\text{True zenith distance} = \delta\alpha + Z + \triangle \zeta + R = \delta\alpha + \zeta$$

Call the true zenith distance ζ_e .

Then $\zeta = \zeta_e - \delta\alpha$ and ϕ_1 (for first star) $= \delta \pm \zeta = \delta \pm \zeta_e \mp \delta\alpha = \phi \mp \delta\alpha$ ϕ being true latitude, and the upper sign being taken for a south star.

Then ϕ_2 (for second star) $= \phi_o \pm \delta\alpha$ and the mean of the two being taken $\frac{1}{2}(\phi_1 + \phi_2) = \phi$; also $\frac{1}{2}(\phi_1 - \phi_2) = \mp \delta\alpha$ which gives a close approximation to the zenith point of the instrument.

The value of a division of the level was determined in the usual way, by a circumpolar star at transit, (see Chauvenet's Astronomy, Vol. II, Article 235), always keeping the star in the centre of the field to avoid any error caused by inclination of the micrometer wire.

The value of a revolution of the micrometer screw was determined by setting the micrometer at an extreme positive reading and then setting the movable thread on a circumpolar star near transit by means of the tangent screw of the telescope. The microscopes and level were then read. The micrometer being now set at an extreme negative reading was again planted on the star and the microscopes and level again read. The difference of the microscope readings corrected for level error (if any) and for the motion of the star in zenith distance, as determined by the formula for the correction to the meridian gives the angular value of the space passed over by the micrometer thread. This value must be corrected for the difference of refraction.

The error of an observation taken as above may be considered to consist of two parts, the error of a bisection and the error of an observation of the microscopes.

The error of the bisection combined with the error in chronometer correction, error in determination of micrometer value, &c., may be considered separately from the probable error of the latitudes. For the quantity called above $\triangle \zeta$ contains all the above quantities and their errors.

Taking the differences from the mean of each set of $\triangle \zeta$'s for each observation and summing all the squares it will be found that the mean error of a bisection, combined with variations in micrometer value, &c., is as follows :—

For a star north of the zenith at Station No. 4,	0".78
" south " "	1".14
" north " Station No. 5,	0".99
" south " "	1".01

Hence the mean error of a north bisection combined with a south would be about 1".00 for each station, and the mean error of the mean of six—that is the part of the error of one latitude pair depending on the bisection would be

$$\sqrt{\frac{1".00}{6}} = 0".41, \text{ and the mean error of the mean of 10 pairs would be } 0".13,$$

and the probable error of the mean of 10 pairs would be 0".09. But the probable errors of the latitudes were 0".26 and 0".16 at stations Nos. 4 and 5 respectively. The difference must be due to the error of reading the microscopes and errors of declination.

The wind, from which it is impossible to shelter an instrument perfectly in the field, causes a great deal of this inaccuracy of the microscope readings by making the lamps flicker, it being very difficult to read microscopes of high power in such circumstances. This is shewn by the probable error at Station No. 4, which is much greater than that at Station No. 5, the nights at the latter station being perfectly calm, while those at the former station were windy.

PART III.

VALLEY OF THE NELSON RIVER.

A.

SPECIAL APPENDIX.

DR. ROBERT BELL TO THE DIRECTOR OF THE GEOLOGICAL SURVEY.

PROVISIONAL REPORT on the country between Lake Winnipeg and Hudson's Bay, with reference to the proposed opening of communication between York Factory and the North-West Territory.

MONTREAL, 17th March, 1879.

ALFRED R. C. SELWYN, Esq., F.R.S.,
Director Geological Survey.

SIR,—In compliance with your request for a special provisional report on the above subject, for transmission to the Hon. the Minister of the Interior, I beg to submit the following:—

I shall first state briefly the nature and extent of my own operations in the region indicated, as far as they bear upon the matter under consideration. Exclusive of surveys of the shores of Lake Winnipeg, a track survey was made from Norway House to York Factory by way of Oxford and Knee Lakes and Hill, Steel and Hayes' Rivers. The neighbourhood of York Factory from the mouth of Hayes' River for about twelve miles up, was surveyed instrumentally. The Nelson River was scaled for ninety miles upwards from its mouth, or for a distance of eighty-one miles in a straight line, and soundings and other observations were taken with a view to testing its capabilities for navigation. The same river was surveyed downwards from Lake Winnipeg for a distance of 180 miles following its general course, and numerous soundings were taken along the navigable stretches. The channels on both sides of most of the large islands were mapped, including those which form the great island, over fifty miles in length, below Great Playgreen Lake. In making these surveys, the amount of rise or fall at each rapid or chute was ascertained by the barometer, or when very slight, by placing the eye on a level with the water above, and dropping a line to that below the descent.

The general character of the country, inland from the rivers and lakes, was investigated by making short excursions to the more elevated points, and where none such existed, by climbing trees; also by diligent enquiries from hunters. About thirty photographs were taken to illustrate the various features of the region explored. Much valuable information was collected from the officers and men of the Hudson's Bay Company and from the Indians, with regard to the climate, snowfall, freezing and breaking up of lakes and rivers, and the condition of Hudson's Bay in winter. The character of the timber and vegetation was everywhere carefully noted.

The outlet of Lake Winnipeg, about a mile and a-half wide, is between the extremity of Mossey Point, at the site of Old Norway House, and the eastern shore, near Montreal Point. A strong current carries the waters through this narrow part into Great Playgreen Lake, thirty-two miles in length. From this lake the river divides so as to form an island fifty-three miles in length, which, having as yet received no name, I propose to call Ross Island, in honor of Mr. Roderick Ross, the gentleman in charge of Norway House. The body of water which passes the west side of this large island, and which might be called the West River, appears to be larger than that on the east side, which may be styled the East River. They unite in Cross Lake, at the foot of the island. Leaving Great Playgreen Lake, the water on the east side of Ross Island divides into numerous channels, which come together again in Little Playgreen Lake. Norway House is situated on

the east side of one of these channels, where it enters this lake, twenty miles in a straight line from the outlet of Lake Winnipeg. The Mission Village of Rossville stands on the east side of Little Playgreen Lake, which has a length of five miles, and contracts to form the eastern channel or continuation of East River, which is followed a further distance of twenty miles in taking the Hudson's Bay Company's boat route to York Factory, or to a point forty-five miles from the outlet of Lake Winnipeg, in a north-north-easterly direction. This channel is full of islands, and has a width varying from half a mile to two miles, except where it subsides to form a larger class of islands. The country on either side is level, with a surface of light coloured clay, underlaid by gneiss rock, which is often exposed along the sides of the rivers and in the Islands, which are usually capped with clay.

The Sea River Falls, the first interruption of smooth water in this channel, occur at thirty-seven miles in a straight line from the outlet of Lake Winnipeg. These "falls" are merely a small chute, with a descent of about four feet in each of the sub-divisions of the channel at this place. Loaded boats run down the chute, and empty ones are hauled up the current. At the extremity of an eastward bend of the river, eight miles below Sea River Falls, or forty-five miles from Lake Winnipeg, the boat route leaves the Nelson River water and turns up a small, crooked, dead water stream called the Echimamish (or little water-shed or each-way river). Following this four miles in a straight line, Hairy Lake, two miles long, is reached, and at twenty-eight miles from Nelson River we come to an abrupt termination of the western division of the Echimamish at the Height of Land Portage. This is over a nearly level rock surface, measuring only twenty-eight yards in width. The boats are easily hauled across this slight interruption and launched into another stream, but bearing the same name, which here begins at a slightly lower level as abruptly as the western part terminates. At seven and a-half miles eastward of this little water-shed this stream, which is small, sluggish and clear, unites with a larger muddy one, called the White-water River, which is the outlet of a considerable sheet of water, lying a short distance to the south, called Little Lake Winnipeg. Sixteen miles further, after passing through Robinson's Lake, we arrive at the Robinson Portage, the most formidable one on the whole route to York Factory. Here the boats are hauled a distance of 1,315 yards, over a wide and well made road with a stiff clay surface. The descent in the river amounts to about forty-five feet. From this portage all the way to York Factory the boats only require to be hauled out of the water twice, and for merely a few yards each time.

I have described the boat route as far as the Robinson Portage, in order to explain how it may be possible to extend navigation from Lake Winnipeg to this point. Steamers could now descend the river without any improvement being made in it as far as the Sea River Falls. From the head of this slight interruption they might be enabled to reach the Robinson Portage by one or the other of two routes, thus giving forty-nine miles of additional navigation, making eighty-six in all from the outlet of Lake Winnipeg.

The western extremity of Little Lake Winnipeg comes close to a bay in the East River, about two miles above Sea River Falls, and only a narrow bog is said to separate them. The river may here possibly even contribute to this lake, as the muddy waters of the latter resemble those of the Nelson River very closely. In any case they might apparently be made to communicate at this place. Little Lake Winnipeg is only a few feet higher than the stretch of water already described between the junction of its outlet (the White-water River) with the Echimamish and the Robinson Portage. The level of this stretch of water could apparently be easily raised to that of Little Lake Winnipeg by a dam at the Robinson Portage, and another across the Echimamish above the junction of the White-water, at both of which places the banks are sufficiently high for a dam, and they are not widely separated. Should these improvements be found feasible, large vessels would be enabled to reach the head of the Robinson Portage from Lake Winnipeg.

Another plan which might be found practicable would be to throw such an obstruction across the eastern channel of the Nelson River, below the Echimamish, as

would raise the water sufficiently to obliterate the Sea River Falls, which would at the same time have the effect of flooding the Echimamish across the little water-shed. This, with a dam at the Robinson Portage, would probably be the means of giving uninterrupted navigation from Lake Winnipeg to this point.

From the Robinson Portage to York Factory the distance is 243 miles, and to the highest point on the Nelson River which could be reached by steamer from its mouth, about 172 miles, or less. The intervening country does not appear to offer any great obstacles to the construction of a railway. On the contrary, its general surface is level and formed of drift materials, with little or no solid rock exposed, except in places in the banks of the rivers and lakes.

Hayes' River and its upward continuations, the Steel and Hill Rivers, were believed by the officers of the Hudson's Bay Company to be navigable at high water, for a certain class of steamers, as far as The Rock, 109 miles in a straight line from York Factory, up to which point wood was cut and piled here and there on the banks to be used by a small propeller which they imported from England, but which proved to be a failure owing to her clumsy model and weak steam-power. The distance between the Robinson Portage and The Rock is only 142 miles, so that with the slight improvement above suggested it may be possible to reduce the distance between the navigable waters extending from Lake Winnipeg, on the one hand, and that from the sea on the other, to the above comparatively short distance. As already stated, steamers from Lake Winnipeg could now reach Sea River Falls, from which the distance to The Rock is 192 miles; to the head of river navigation on the Nelson, 208 miles; to York Factory, 301 miles; and to the mouth of the Nelson River (Port Nelson) the same distance.

It will be unnecessary for the present purpose to describe in detail the remainder of this boat route to York Factory. A few remarks, however, will be necessary to complete the subject. From the junction of the eastern division of the Echimamish with the White-water, as far as Oxford or Holly Lake, the stream, which has as yet received no name, might for convenience of description be called Franklin's River, in honour of the late Sir John Franklin, who nearly lost his life by drowning in the upper part of it in 1819. Below the Robinson Portage this river expands successively to form Pine and Windy Lakes before falling into Oxford Lake, all the intervening stretches being broken by rapids. Oxford Lake has a total length of about thirty miles, and empties by Trout River into Knee Lake, which is forty miles long, and discharges itself by Jack River into Swampy Lake, ten miles long. Leaving the last named lake, the stream flows through a labyrinth of islands for nineteen miles, and then becomes almost continuously rapid as far as Brassy Hill on the south-east side, and 392 feet high, from which the river takes its name. The last rapid before reaching the sea, called The Rock, occurs in Hill River, at a distance, as already stated, of 109 miles in a straight line from York Factory. Loaded boats are easily tracked up stream as far as this point. At seventy-nine miles from York Factory this branch is joined by the Foxes River on the left side, and their united waters receive the name of the Steel River until they are joined by the Shamattawa from the right, at fifty miles from York Factory, and thence to the sea they are called Hayes' River. From The Rock to York Factory the river flows with a swift current between banks of clay, which sometimes have an elevation of about 100 feet.

York Factory stands on the left bank of Hayes' River at a distance of five miles up from the extremity of the tongue of land called Beacon Point, which separates its mouth from the mouth of the Nelson. The Hudson's Bay Company's ships from London ascend the river at high tide as far as the Factory, which is built on level ground twenty-seven feet above tide-mark. There is safe anchorage, however, at all stages of the tide in "The Five-fathom Hole," seven and a-half miles north eastward from the Factory.

A short general description will now be given of the upper half of the Nelson River. This stream, from Great Playgreen Lake, for more than 100 miles is remarkable for its straggling character. It is nowhere confined to a single channel, but

divides and sub-divides, and the channels here and there partially reunite, only to divide again, thus forming many large and a great number of smaller islands.

The channels are generally deep, with rather low banks of gneiss rock or greyish or drab-colored clay, or composed partly of each. The general descent in the surface of the country is effected by a variety of chutes and rapids, at varying intervals, in the different channels. It will thus be observed that the Nelson River does not flow in a valley, properly speaking; the facility with which it spreads itself widely in so many different channels proving the comparatively level nature of a great area, and the generally even character of the slope or descent of the country which these channels traverse.

The river has been already described as far down as the Echimamish, where the boat route to York Factory leaves it and follows a chain of lakes and streams lying to the southeast of the Nelson, some miles above the Echimamish; the East River gives off several channels, which detach large portions from the eastern side of Ross' Island. Following down one of these called the North River, the first broken water below Sea River Falls is met with where this channel rejoins that which receives the Echimamish at the eastern bend already mentioned. This break, which is called the North River Rapids, occurs at nine miles from Sea River Falls, and has a descent of five feet. At five miles further down there is a slight rapid, with a descent of one foot.

In the last four miles before entering Pipestone Lake, fifteen miles below North River Rapids, seven more rapids occur, with a total fall of eighteen feet. Pipestone Lake measures about ten miles from east to west, and connects with Cross Lake by a dead-water channel five miles long. The latter lake is so called from its lying across the general course of the Nelson River at this part. It has a probable length of thirty miles or more, with a breadth of two to four miles, but contracts to a mere creek in two places. Cross Lake has three principal outlets, but two islands in the western one increase the number to five.

Leaving Cross Lake by the central outlet, the first broken water encountered is the Ebb-and-flow Rapid, with a fall of about fifteen feet. In the western outlet this descent is spread over a length of two miles; but midway down these rapids, part of the water escapes to the west, at right angles, forming a steep descent of about twenty feet, called the Pelican Falls. The principal discharge which leaves the still water at the foot of the Ebb-and-flow Rapid subdivides itself into three parts at the White-mud Falls, each of which appears to have as much water as the Ottawa River at the Chaudiere Falls.

The other discharges in this part of the river would probably represent nearly or quite as much more water, so that the Nelson River, when united into one channel, may be said to be, at any rate, four times the size of the Ottawa at the Capital. Beginning at four miles below the White-mud Falls, which have a descent of about twenty feet, there is a mile of swift water with a fall of about three feet. Two miles from the foot of this current is the chute at the Bladder Portage, with a fall of ten feet. Four miles further on, the river divides at the Forks, one portion flowing west to Duck Lake, and the other north to Sipi-wesk Lake, into which the discharge from Duck Lake falls, at a distance of sixteen miles, in a straight line, from the Forks.

In the last mentioned or direct channel, two chutes occur between the Forks and Sipi-wesk Lake, the first at the Overhill Portage, with a fall of fifteen feet, and the second at the Red Rocks Portage, with a descent of ten feet. Two rapids occur above and one below the latter, with a fall of about two feet in each, or six feet in all.

There is a slight rapid, with a fall of about one foot, at the Chain-of-Rocks Rapid, four miles before reaching Sipi-wesk Lake. From the Red Rocks Rapid, the river is continuously navigable for steamers to the Grand Rapid, a distance of about 108 miles. The length of navigable water may be greater by following the channel which leads up to Duck Lake, or even the long north-western bay of Sipi-wesk Lake. The main channel of this lake is thirty miles long and full of islands. The volume of water passing through it is so great as to give a perceptible current. At its outlet the waters of the Nelson River have all come together, for the first time, into one

channel, which has an average width of only a quarter of a mile, and much less at a few points. The depth along the middle was found to average from forty to fifty feet. The current runs from two to four miles per hour, except at a swift place, called the Devil's Rapid, and another between three and four miles below it, where the velocity is greater, but still these swift places could be ascended by steamers. From Sipi-wesk Lake the course of the river is north-east for twelve miles, and then north by east, and nearly straight for about fifty-eight miles to the Grand Rapid.

The following table is a recapitulation of the distances, in straight lines, between the rapids or chutes on the Nelson River (by the channels followed) and the amount of fall in each. Those which might apparently be run downward (without improvement) by a river steamer are marked thus (*); those which might apparently be passed both upward and downward are marked thus (**). In some cases channels which were not examined might offer greater facilities for navigation than those which were explored :—

	Miles from last fall.	Fall in feet.
Sea River Falls, 37 miles from outlet of Lake Winnipeg (*)		4
North River Rapids (by another channel, probably *)	9	5
Slight Rapid (**)	5	1
Seven rapids in four miles.* (Three of them **, and two *)	6 to 10	18
Ebb and Flow Rapids (the corresponding rapids in the western channel *)	22	15
White Mud Falls	4	20
Swift water (for one mile **)	4 to 5	3
Bladder Portage Chute (*)	2	10
Overhill Portage Chute	6	15
Small Rapid (**)	1½	2
Small Rapid (**)	1	2
Red Rocks Rapid (crooked)	½	10
Small Rapid (**)	½	2
Chain-of-Rocks Rapids (**)	4	1

 108

The general character of the country bordering the Nelson River from Norway House to the Goose-Hunting River, is pretty much the same. The whole surface appears to be overspread with light greyish clay, which forms an excellent soil. The rocks are seen beneath the clay in the islands and along the banks; and in the vicinity of the rapids, they crop out over a greater or less area. Where the river has formed itself into the single deep straight channel of almost uniform width from Sipi-wesk to Split Lake, the east bank is composed of clay, almost continuously, while more or less rock is exposed on the west bank. Higher up the Nelson, much bare rock is seen along the West River, and the soil is mostly sandy and poor all the way from Great Playgreen Lake to Cross Lake, thus contrasting with the margins of the East River. My track-survey did not extend much beyond Goose-Hunting River, but a country similar to that explored above this stream is said to continue to Split Lake.

Between the Grand Rapid and this lake, the Chain-of-Islands Rapid is said to be the only interruption to easy navigation.

From Gull Lake to the point which I reached from the sea, the river is broken by a number of bad rapids.

The lower part of the Nelson River from the sea upward will now be described.

Beacon Point, the low tongue of land lying between the mouths of the Hayes' and the Nelson Rivers, terminates in a shoal which projects a considerable distance out to sea.

I explored the latter river, as already stated, for about ninety miles from its

mouth, or to a point lying eighty-one miles in a straight line, south-west from the ordinary high tide mark, at the extremity of the above tongue of land. In making a careful track-survey of this part of the Nelson River, its possible future use for the navigation of large vessels was constantly kept in view, and numerous soundings were taken, not only between Beacon Point and head of tide, but as far as the first rapid. The width of the channel, velocity of current, nature of the banks, &c., were also noted.

The width of the mouth of the river, from Beacon Point to the opposite shore, is about six or seven miles at high tide, but the extremely flat nature of the country renders it difficult to draw an exact line between the land and water. Above this, for ten miles, the width is from three to four miles, at the end of which distance it narrows gradually till the head of tide water is reached at the upper end of Seal Island, twenty-four miles from Beacon Point, where the breadth is only about one mile and a-half. At low tide the space between the banks in the estuary of the river is found to be occupied by mud-shoals scattered over with boulders, with a channel winding down the middle. This channel is rather narrow and its bottom irregular. It has an average depth of two to three fathoms at low tide as far as Flamborough Head, a prominent point 126 feet high, on the north-west side, nineteen miles from Beacon Point. At the mouth of the river, the average spring-tides amount to about twelve feet, and neap-tides to about six feet.

The foot of Gillam's Island, the first in the river, is twenty-two and a-half miles from the extremity of Beacon Point, and the head of the next, or Seal Island, much larger than Gillam's, is a mile and a-half higher up. The shallowest part of the river anywhere noted was just at these islands, the depth being only about ten feet. The bed of the river consists of shingle, resting on boulder clay.

From this shallow part, at the head of tide, the average depth of the centre of the river was found to be twenty feet, as far as I went, but sometimes the soundings showed over thirty feet. The mean velocity of the current in the middle of the river is about two and a-half miles an hour, and the general width of the stream is about three-quarters of a mile. Besides a few shingle and grassy islands, exposed only during low water, twenty-six timbered islands occur in the above distance. With the exception of a few exposures of limestone, the banks are composed of fine drift clay. In ascending from the sea they gradually rise from the level of high tide at the mouth, to an elevation exceeding 100 feet abreast of Seal Island, and this height is maintained on one side or the other as far up as I followed the stream. The banks on both sides usually rise steeply from the edge of the river or at a short distance back from it. Occasionally, the almost perpendicular banks of clay are nearly 200 feet high.

The rapid, near the highest point which I reached, is not a formidable one, and has an even descent amounting to only a few feet. It might be ascended by a steam-boat of strong power, in which case an additional stretch of good navigation would be gained, which my Indians estimated at fifteen miles. At the end of this stretch, the Limestone Fall, a cascade in several steps, is reached.

Before concluding, I may be permitted to make a few remarks in regard to the proposed construction of a highway to connect the seaboard with the system of inland navigation which centres in Lake Winnipeg.

Assuming that the products of the North-West Territories can be carried to Europe and elsewhere through Hudson's Bay and Strait, the great importance of opening communication to some point at or near York Factory, as soon as circumstances will permit, must be patent to every one. The centre of the great agricultural region, lying between the United States boundary and the Mackenzie River, is more than 300 miles nearer to Norway House than to Winnipeg, and the former is 100 miles nearer to York Factory than the latter is to Thunder Bay, on Lake Superior. As to the question whether we should look forward to the construction of a canal or a railway as the most advantageous means of connecting Lake Winnipeg with Hudson's Bay, it appears evident, from the facts which I have given, that the latter is both the most practicable and desirable, for the following, amongst other reasons:—

Without entering into any calculation as to the saving in time, which would be a great object in the consideration of the question, I shall merely allude to a few points bearing upon the actual construction of either of these means of communication.

The descent from Lake Winnipeg to the sea is about 100 feet greater than the whole fall from Lake Superior to the Gulf of St. Lawrence. The boat route by Oxford Lake and Haye's River would be impracticable for a canal, owing (amongst other causes) to the small supply of water and the continuously rapid descent all the way from Swampy Lake.

The Nelson River has the advantages of an ample body of water, some navigable stretches, and but little variation in its volume at different seasons of the year. Probably about 250 out of the total rise of 710 feet between the leve of the sea and that of Lake Winnipeg, would require to be surmounted by locks. These would need to be cut through Laurentian gneiss, one of the most expensive kinds of rock to excavate. Then a canal would be open for only half the year or less, whereas a railway here could be used at any season, the snow-fall in this region being lighter than in some of the more southern parts of Canada. In constructing a railway, few or no rock-cuttings would apparently require to be made, and there would even probably be but little earthwork. No rivers or lakes are known to cross any part of the route, and the line might be constructed in almost a straight course from Sea River Falls to York Factory or Port Nelson. Some swamps, small lakes, and a few brooks, such as the head branches of the Foxes River, would, in all likelihood, be the most serious obstacles encountered.

The cost of building a railway through this region would, perhaps, not exceed thirty thousand dollars a mile, in which case the following table would exhibit approximately the total sum necessary to open the best kind of communication between the sea and our North-West Territories :—

	Miles.	Cost at \$30,000 a mile.
Sea River Falls to York Factory or to the mouth of the Nelson River.....	301	\$9,030,000
Sea River Falls to head of river navigation on the Nelson River.....	208	6,240,000
Robinson Portage to the same point.....	172	5,160,000
Robinson Portage to York Factory or to the mouth of the Nelson.....	243	7,290,000
Robinson Portage to The Rock (on Hayes' River).....	142	4,260,000

The fine clay soil along the upper half of the Nelson River has been already referred to. All accounts agree in representing that an equally good clay soil, with occasional interruptions of rock, extends thence north-westward through the region drained by the Burntwood River and all the way to the Churchill.

A similar country may be said to extend all along the boat route from Norway House to York Factory. In the northern half of this distance the surface, except close to the rivers, appears to be generally level, wet and covered with sphagnum, but it supports a growth of rather small spruce and tamarac timber. Looking from the top of Brassy Hill, near Hill River, the surface of the country appears level, in a general way, in all directions, but minor undulations and banks of earth, interspersed with small lakes, are also visible. This view is said to represent a good average example of the whole region between the Laurentian area and the sea, from the Weenisk to the Churchill River, embracing, perhaps, upwards of one hundred thousand square miles. Good land is reported to extend over a considerable area southward from this boat route, including the country around God's Lake and the head waters of the Severn River. But the district lying east of Lake Winnipeg is reported to be generally rocky and swampy. The southern limit of the perpetually frozen ground is said to cross Hill River about The Rock, but there is much doubt as to the correctness of this theory, since any observations hitherto made have been on exposed

river banks or beneath a thick coating of vegetable matter in the woods. Under either of such circumstances "perpetual frost" may be found in the latitude of Montreal. That the soil is fertile is proved by the gardens at Norway House, Cross Lake, and Oxford House, at all of which very fine root crops and vegetables are grown. Barley ripens well as far north-east as Oxford House at least. At York Factory potatoes are the only crop at present cultivated.

The most useful kinds of timber in the region under consideration are the spruce and tamarac, which extend to beyond the Churchill River, and also the Banksian pine, which is found almost as far as York Factory; these species would all be valuable for railway ties and telegraph poles, as well as for fuel. The white birch ranges to the Steel River, while the northern limits of the aspen, the balm of Gilead and several kinds of willow are beyond the Nelson River.

I have the honor to be, Sir,

Your obedient servant,

(Signed) ROBERT BELL, M.D.,

Graduate in Civil Engineering.
